Comment 1: Less sample used--samples voluminous

LH 04/04/08 : 202202-001: Soil Aliquot Book, BK2627, p187 shows that the weight is 20.45g, not 20.42g as appears in LIMS and on handwritten prep log page.

LH 04/04/08 : 202202-001 weight issue was investigated and resolved by JDG.

Analyst: JDG Date: 04/04/08 Reviewer: LH Date: 04/04/08

Baked, solvent-rinsed granular Na2SO4 weighed out for QC samples	EM 47281748	EAB 4/1/08
Samples were dried with CH2Cl2-rinsed powdered Na2SO4	EM 47281804	
1.0 *0.5 **0.4 mL of Surrogate solution was added to all samples	S8587A / S8587C	
1.0 mL of Matrix Spiking solution was added to all spikes	S8826A	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all CH_2Cl_2	EM48064	
Acetone	EM47190	
Samples were: ☐ sonicated 3 times ☒ placed on shaker table at:	1340	
taken off shaker table at:	1550	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM47281604	
Concentrated to final volume at temperature (degrees C)	100	
Relinquished to TEH Department	✓	↓

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 203210 Date Received 5/9/08 Number of coolers 1
Client MACTEC Project BLDG. 1065 - TRENCH

Date Opened 5/9/08 By (print) M. VILLANUEVA (sign)
Date Logged in ↓ By (print) ↓ (sign) ↓

1. Did cooler come with a shipping slip (airbill, etc)?..... YES NO
Shipping info _____

2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☐ NO
How many _____ Name _____ Date _____
2B. Were custody seals intact upon arrival? ..... YES NO N/A
3. Were custody papers dry and intact when received?..... YES NO
4. Were custody papers filled out properly (ink, signed, etc)?..... YES NO
5. Is the project identifiable from custody papers? (If so fill out top of form)..... YES NO
6. Indicate the packing in cooler: (if other, describe) _____

☐ Bubble Wrap ☐ Foam blocks ☑ Bags ☐ None
☐ Cloth material ☐ Cardboard ☐ Styrofoam ☐ Paper towels
7. If required, was sufficient ice used? Samples should be < or = 6°C ..... YES NO N/A
Type of ice used: ☑ WET ☐ BLUE ☐ NONE Temp(°C) NO TRIP BLANK
☐ SAMPLES RECEIVED ON ICE DIRECTLY FROM FIELD. COOLING PROCESS HAD BEGUN.

8. Were soil Encore sampling devices present? ..... YES NO
If YES, what time were they transferred to freezer? 1715
9. Did all bottles arrive unbroken/unopened?..... YES NO
10. Are samples in the appropriate containers for indicated tests? ..... YES NO
11. Are sample labels present, in good condition and complete? ..... YES NO
12. Do the sample labels agree with custody papers? ..... YES NO
13. Was sufficient amount of sample sent for tests requested? ..... YES NO
14. Are the samples appropriately preserved? ..... YES NO N/A
15. Are bubbles absent in VOA samples?..... YES NO N/A
16. Was the client contacted concerning this sample delivery?..... YES NO
If YES, Who was called? _____ By _____ Date: _____

CASE NARRATIVE

Laboratory number:	**203210**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065-Trench**
Request Date:	**05/09/08**
Samples Received:	**05/09/08**

This hardcopy data package contains sample and QC results for four soil samples, requested for the above referenced project on 05/09/08. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
5035 samples not analyzed within 48 hours were frozen.

High surrogate recovery was observed for bromofluorobenzene (FID) in 1065EX369[8.0] (lab # 203210-002); the corresponding trifluorotoluene (FID) surrogate recovery was within limits.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 137960; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
5035 samples not analyzed within 48 hours were frozen.

Low response was observed for Freon 12 in the ICV analyzed 03/16/08 17:22; this analyte was not detected at or above the RL in the associated samples.

Low response was observed for Freon 12 in the CCV analyzed 05/11/08 15:23; this analyte met minimum response criteria.

Methylene chloride and naphthalene were detected between the MDL and the RL in the method blank for batch 137972; these analytes were not detected in samples at or above the RL.

Methylene chloride was detected between the MDL and the RL in a number of samples; this analyte is a common laboratory contaminant.

No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for dibenz(a,h)anthracene and indeno(1,2,3-cd)pyrene in the ICV analyzed 05/07/08 20:08; these analytes

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**203210**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065-Trench**
Request Date:	**05/09/08**
Samples Received:	**05/09/08**

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
were not detected at or above the RL in the associated samples, and affected data was qualified with "b".

No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of 1065EX368[8.0] (lab # 203210-001); the BS/BSD were within limits, and the associated RPD was within limits. High recovery was observed for vanadium in the MS of 1065EX368[8.0] (lab # 203210-001); the BS/BSD were within limits, and the associated RPD was within limits.

High % differences were observed for beryllium and lead in the serial dilution of 1065EX368[8.0] (lab # 203210-001).

Selenium and zinc were detected between the MDL and the RL in the method blank for batch 138024; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank.

No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	**203251**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**05/13/08**
Samples Received:	**05/13/08**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 05/13/08. See attached cooler receipt form for any sample receipt problems or discrepancies.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):

5035 samples not analyzed within 48 hours were frozen.

Low recovery was observed for gasoline C7-C12 in the MS for batch 138103; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 138103; this analyte was not detected in the sample at or above the RL.

No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

High recovery was observed for diesel C12-C24 in the MSD for batch 138061; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated sample.

No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

5035 samples not analyzed within 48 hours were frozen.

Low response was observed for Freon 12 in the ICV analyzed 03/16/08 17:22; this analyte was not detected at or above the RL in the associated samples.

Low responses were observed for 1,2-dichloroethane and Freon 113 in the CCV analyzed 05/13/08 16:27; these analytes met minimum response criteria. High response was observed for methylene chloride; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b".

Methylene chloride and naphthalene were detected between the MDL and the RL in the method blank for batch 138046; these analytes were not detected in the sample at or above the RL.

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**203251**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**05/13/08**
Samples Received:	**05/13/08**

Volatile Organics by GC/MS (EPA 8260B):
Methylene chloride was detected between the MDL and the RL in 1065EX371[8.0] (lab # 203251-003); this analyte is a common laboratory contaminant.

No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for dibenz(a,h)anthracene and indeno(1,2,3-cd)pyrene in the ICV analyzed 05/07/08 20:08; these analytes were not detected at or above the RL in the associated samples.

No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of 1065EX371[8.0] (lab # 203251-003); the BS/BSD were within limits, and the associated RPD was within limits. High recovery was observed for vanadium in the MS of 1065EX371[8.0] (lab # 203251-003); the BS/BSD were within limits, and the associated RPD was within limits.

High % differences were observed for many analytes in the serial dilution of 1065EX371[8.0] (lab # 203251-003).

Beryllium, copper, and thallium were detected between the MDL and the RL in the method blank for batch 138137; these analytes were either not detected in the sample at or above the RL, or detected at a level at least 10 times that of the blank.

No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
High RPD was observed for moisture, percent in the SDUP of 1065EX371[8.0] (lab # 203251-003). Curtis and Tompkins controls RPD based on the % solids which was within quality control criteria.

No other analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 203251 Date Received 5-13-08 Number of coolers 1
Client Mactec Project Building 1065

Date Opened 5-13-08 By (print) F Nichols (sign) [signature]
Date Logged in 5-13-08 By (print) _____ (sign) [signature]

1. Did cooler come with a shipping slip (airbill, etc)? ..... YES (NO)
   Shipping info _____
2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☒ NO
   How many _____ Name _____ Date _____
2B. Were custody seals intact upon arrival? ..... YES NO (N/A)
3. Were custody papers dry and intact when received? ..... (YES) NO
4. Were custody papers filled out properly (ink, signed, etc)? ..... (YES) NO
5. Is the project identifiable from custody papers? (If so fill out top of form) ..... (YES) NO
6. Indicate the packing in cooler: (if other, describe) _____

☐ Bubble Wrap ☐ Foam blocks ☒ Bags ☐ None
☐ Cloth material ☐ Cardboard ☐ Styrofoam ☐ Paper towels

7. If required, was sufficient ice used? Samples should be < or = 6°C ..... (YES) NO N/A
   Type of ice used: ☒ WET ☐ BLUE ☐ NONE Temp(°C) No temp blank, Cold
   ☐ SAMPLES RECEIVED ON ICE DIRECTLY FROM FIELD. COOLING PROCESS HAD BEGUN.
8. Were soil Encore sampling devices present? ..... (YES) NO
   If YES, what time were they transferred to freezer? 1330
9. Did all bottles arrive unbroken/unopened? ..... (YES) NO
10. Are samples in the appropriate containers for indicated tests? ..... (YES) NO
11. Are sample labels present, in good condition and complete? ..... (YES) NO
12. Do the sample labels agree with custody papers? ..... (YES) NO
13. Was sufficient amount of sample sent for tests requested? ..... (YES) NO
14. Are the samples appropriately preserved? ..... YES NO (N/A)
15. Are bubbles absent in VOA samples? ..... YES NO (N/A)
16. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, Who was called? _____ By _____ Date: _____

APPENDIX E

EVALUATION OF ALTERNATIVES FOR REMEDIATION BENEATH BUILDING 1063

Evaluation of Corrective Action Alternatives
Soils Under Southern Wall, Building 1063
Building 1065 Area, Presidio of San Francisco

Corrective Action Alternative	Evaluation Criteria								
	Effectiveness	Implementability			Relative Cost				
	Description/Effectiveness	Constructability	Timeliness	Impacts to Ongoing Operations and Resources	Capital Cost(1)	Max O&M (Monitoring) Cost(2)	Min O&M (Monitoring) Cost(3)	Total Cost (Min)(3)	Total Cost (Max)(2)
No Action	No Action / Groundwater Monitoring (1-3 years of monitoring), may need indoor air asssessment (up to $90,000), and may also require that engineering measures be implemented during building construction to reduce vapor intrusion into indoor air (not costed).	Would not involve construction.	Easy to Implement.	Possible impacts to future site workers from exposure to vapor migration into indoor air	$0	$122,140	$61,780	$61,780	$122,140
Excavation	Would effectively remove the majority of contamination beneath the foundation with approx 1,080 ft^3 left in place at the southeast corner of Excavation 1 . Contamination left in place to be treated by ORC or RegenOx insitu. 1 to 3 years of quarterly groundwater monitoring.	Construction already planned; would include an extra pothole for ORC/RegenOx application.	Moderate level of effort to implement within short time frame.	Building is unoccupied; impacts related to extended use of parking area for soil stockpiles. Shoring will be used to prevent impacts to historic building.	$124,420	$122,140	$61,780	$186,200	$246,560
ORC Advanced Injection	Would treat TPH left in place through injection of ORC advanced using direct push injection angle borings. Will involve monitoring (1-3 years) and 3 confirmation soil borings. Advantage of the alternative is that the area can be targeted directly. Disadvantage of the alternative is that ORC advanced takes 1 year to 18 months and will remove up to 80-90% of TPH and ORC advanced would not be effective in the vadose (smear) zone.	Easily achievable with angle borings or vertical borings placed along the edge of the foundation.	80 to 90 % effectiveness in 1 year to 18 months.	Building is unoccupied; no expected impacts to operations during injection activities. Care would be taken to inject below building footings to limit impact to historic building.	$54,850	$122,140	$61,780	$116,630	$176,990
ORC Advanced Trench Application	Would treat TPH left in place using ORC Advanced placed in a 4 ft deep trench along the south side of the the wall. ORC advanced would be mixed in with drain rock and a slotted pipe would be placed along the entire length (at approx 3 feet bgs) for later injections of water. Two extra trips would be made over the year to flush approximately 1,000 gallons (each trip) through the pipe to flush the ORC and oxygenated water into the formation. Same time frame as ORC Advanced injection. Disadvantage of the alternative is that it cannot be targeted in the source zone, relies on water transport to bring the O_2 to the target area, and the ability to flow into the formation may be reduced because of lower relative permeability of soil beneath the building wall. Alternatives' advantage is that oxygenated water can be administered over over several events, increasing the amount of oxygen introduced to polish off TPH left in place.	Easily achievable while excavation equipment is onsite.	80 to 90 % effectiveness in 1 year to 18 months.	Building is unoccupied; impacts related to extended use of parking area for equipment staging and stockpiles; would have limited impact to historic buiding.	$47,050	$122,140	$61,780	$108,830	$169,190
RegenOx Injection	Would treat TPH left in place through injection of RegenOx using direct push injection angle borings. Will involve long 1-3 years groundwater monitoring and 3 confirmation soil borings. Alternatives advantage is that the area can be targeted directly - RegenOx is active for approximately 3 weeks and breaks down TPH/VOCs. Would be more effective than ORC Advanced in addressing contaminants in the vadose (smear) zone. Disadvantage is that it is only expected to remove up to 80-90% of TPH. Use of this technology would require an amendment to the CAP.	Easily achievable with angle borings or vertical borings placed along the edge of the foundation.	80 to 90 % effectiveness in 1 month.	Building is unoccupied; no expected impacts to operations during injection activities. Care would be taken to inject below building footings to limit impact to historic building.	$59,110	$122,140	$61,780	$120,890	$181,250
RegenOx Trench Application	Would treat contaminants left in place using RegenOx placed in a 4 foot deep trench along the south side of the the foundation wall. RegenOx would be mixed in with drain rock flushed into the formation with approximately 7,200-gallons of tap water and a slotted pipe would be placed along the entire length (at approx 3 feet bgs) for later injections of water (two extra trips would be made over two months) to flush approximately 1,000 gallons (each trip) through the pipe. Will take approximately 2 months longer than injection (to allow for water flushing), has disadvantage in that it cannot be targeted in the source zone, relies on water transport to bring the O_2 to the target area, and the ability to flow into the formation may be reduced because of lower relative permeability of soil beneath the building wall. Use of this technology would require an amendment to the CAP. Its advantage is that oxygenated water can be administered over the whole area over several events, thus increasing the amount of oxygen introduced and polishing off TPH left in place.	Easily achievable while excavation equipment is onsite.	80 to 90 % effectiveness in 3 months.	Building is unoccupied; impacts related to extended use of parking area for equipment staging and stockpiles; would have limited impact to historic buiding.	$66,910	$122,140	$61,780	$128,690	$189,050

(1) Costs for Indoor Air Assessment not included in cost estimate, but may be up to $90,000 based on costs for Building 1040 work.
(2) Note that groundwater monitoring is included in CAP costs; cost assumes that a full three years of monitoring will be required (1 year quarterly and 2 years semiannual).
(3) Note that groundwater monitoring is included in CAP costs; cost assumes that only 1 year of quarterly monitoring will be required

Summary of Estimated Costs for Leaving Soils In Place under South Foundation Wall & Monitoring for 3 years
Building 1065 Area
Presidio of San Francisco, California

Task Description	Unit	Quantity	Unit Cost	Subtotal	Total
Quarterly Groundwater Monitoring and Reporting					
Sample well	ea	130	$268	$34,814	
Analyze water samples from wells					
TPHg	ea	55	$50	$2,750	
Title 22 Metals	ea	75	$70	$5,250	
Data Validation	ea	130	$42	$5,421	
Input analytical results into Presidio Database	ea	130	$18	$2,327	
Dispose of Groundwater Sampling residuals	ea	8	$452	$3,618	
Prepare groundwater monitoring report	ea	8	$5,950	$47,600	
					$101,780
20 % Contingency					$20,356
Total Preliminary Estimated Costs					**$122,136**

Excavation of Soil Under South Foundation Wall
Building 1065 Area
Presidio of San Francisco, California

Task Description	Unit	Quantity	Unit Cost	Subtotal	Total
Excavation Costs (from ERRG)					
Shoring	ls	100%	$ 33,184.0	$ 33,184.0	
Excavation	ton	180	$ 37.7	$ 6,777.0	
Transport and Disposal	ton	180.00	$ 98.1	$ 17,650.8	
Import and Installation of Fill Material	ton	180.00	$ 28.7	$ 5,164.2	
					$62,776
Treatment of Soil Left in Place on East Sidewall with RegenOx or ORC					
RegenOx/ORC Costs	lbs	1000	$ 2.5	$ 2,500.0	
Injection Costs	day	1	$ 3,000.0	$ 3,000.0	
CAP/WP Addendum (if using RegenOx)	ls	100%	$ 8,000.0	$ 8,000.0	
Provide resident engineer	week	0.14	$ 5,950.0	$ 850.0	
Provide vehicles & equipment	week	0.14	$ 1,547.0	$ 221.0	
					$14,571
Confirmatory Soil Boring for soil left in place on east sidewall					
Driller Charge	ls	100%	$1,000	$1,500	
Lab Costs					
TPHg	ea	2	$45	$90	
TPHd/TPHfo	ea	2	$70	$140	
VOCs	ea	2	$120	$240	
PAHs	ea	2	$160	$320	
Title 22 Metals	ea	2	$120	$240	
Data Validation	ea	2	$42	$83	
Input analytical results into Presido Database	ea	2	$18	$36	
Provide resident engineer	week	0.15	$5,950	$893	
Provide vehicles & equipment	week	0.15	$1,547	$232	
Collect Soil Confirmation Sample	ea	2	$31	$62	
Prepare Report for RegenOx/Soil Borings	ea	100%	$22,500	$22,500	
					$26,336
20 % Contingency					$20,737
Subtotal Capital Costs					$124,419
Quarterly Groundwater Monitoring and Reporting (one year - 4 qtrs)					
Sample well	ea	65	$268	$17,407	
Analyze water samples from wells					
TPHg	ea	30	$50	$1,500	
Title 22 Metals	ea	40	$70	$2,800	
Data Validation	ea	70	$42	$2,919	
Input analytical results into Presidio Database	ea	70	$18	$1,253	
Dispose of Groundwater Sampling residuals	ea	4	$452	$1,809	
Prepare groundwater monitoring report	ea	4	$5,950	$23,800	
					$51,488
20 % Contingency					$10,297.6
Subtotal					$61,785
Total Preliminary Estimated Costs					**$186,204**

Except where noted, costs are based on unit rates from the Building 1065 CAP

Summary of Estimated Costs for ORC Injection, Soil Borings, Reporting, and Groundwater Monitoring
Building 1065 Area
Presidio of San Francisco, California

Task Description	Unit	Quantity	Unit Cost	Subtotal	Total
ORC Injection					
Driller Costs	ls	100%	$ 10,000.0	$ 10,000.0

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 32585 were outside control limits. The associated laboratory control standard (LCS) met acceptance criteria.

No other analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	comp 4:1, also split to sub Asbestos

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

Metals
No analytical or quality issues were noted.

General Chemistry
Method(s) 1311: Ambient temperature of 18.1ºC was recorded during the 18 hour TCLP extraction. This temperature is outside the method defined range of 23 ± 2ºC.

No other analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	comp 4:1, also split to sub Asbestos

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 720-13872-1

Job Description: Presidio Trust TOS

For:
ERRG
185 Mason Circle, Ste A
Concord, CA 94520

Attention: Tyson Appel

Dimple Sharma
Project Manager I
dimple.sharma@testamericainc.com
04/16/2008

cc: Mr. James Medley

TestAmerica Laboratories, Inc.
TestAmerica San Francisco 1220 Quarry Lane, Pleasanton, CA 94566
Tel (925) 484-1919 Fax (925) 484-1096 www.testamericainc.com

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 34250 were outside control limits. The associated laboratory control standard (LCS) met acceptance criteria.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
Method(s) 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 34242 were outside control limits. The associated laboratory control standard (LCS) met acceptance criteria.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

Client: ERRG Job Number: 720-13872-1

Lab Sample ID / Analyte	Client Sample ID	Result / Qualifier	Reporting Limit	Units	Method
720-13872-5	**1065SC302A,B,C,D**				
Diesel Range Organics [C10-C28]		9.0	1.0	mg/Kg	8015B
Motor Oil Range Organics [C24-C36]		54	50	mg/Kg	8015B
Chromium		42	0.95	mg/Kg	6010B

RE: Work Sharing Agreement
Work Order: MRD0867

Enclosed are the results of analyses for samples received by the laboratory on 04/25/08 19:15. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Douglas Clark
Project Manager

CA ELAP Certificate # 2682

The Chain(s) of Custody, 4 pages, are included and are an integral part of this report.

The report shall not be reproduced except in full, without the written approval of the laboratory. The client, by accepting this report, also agrees not to alter any reports whether in the hard copy or electronic format and to use reasonable efforts to preserve the reports in the form and substance originally provided by TestAmerica.

For Volatile Analysis a trip blank is required to be provided. If trip blank results are not included in the report, then either the trip blank was not submitted or requested to be analyzed.

The reported results were obtained in compliance with the 2003 NELAC standards unless otherwise noted.

What's new in Ambient Air?

Let the #1 industry team of experts in Ambient Air help you find solutions today! http://www.testamericainc.com

- NEW! - ASTM publishes new guidance on Vapor Intrusion standards. Contact us for a copy or to learn how TestAmerica can assist you.
- Largest certified sampling media inventory, including more than 5,000 canisters and flow controllers.
- Access to the latest technical expertise in:
  - Vapor Intrusion
  - Soil Gas Survey
  - Perimeter Air Monitoring

Just a click away- contact us today for more information!

Ask your sales executive or project manager for more details.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	comp 4:1

Subject: RE: Files from 720-14442-1 Presidio Trust

Can you now run TPH-gasoline range with BTEX and LUFT 5 metals on this sample?

Thanks,
James

Generator's Nonhazardous Waste Profile Sheet

105024CA

D. Regulatory Status (Please check appropriate responses)

1. Is this a USEPA (40 CFR Part 261)/State hazardous waste? If yes, contact your sales representative. ☐ Yes ☑ No
2. Is this waste included in one or more of categories below (Check all that apply)? If yes, attach supporting documentation. ☐ Yes ☑ No
   - ☐ Delisted Hazardous Waste
   - ☐ Excluded Wastes Under 40 CFR 261.4
   - ☐ Treated Hazardous Waste Debris
   - ☐ Treated Characteristic Hazardous Waste
3. Is the waste from a Federal (40 CFR 300, Appendix B) or state mandated clean-up? If yes, see instructions. ☑ Yes ☐ No
4. Does the waste represented by this waste profile sheet contain radioactive material? ☐ Yes ☑ No
   a. If yes, is disposal regulated by the Nuclear Regulatory Commission? ☐ Yes ☐ No
   b. If yes, is disposal regulated by a State Agency for radioactive waste/NORM? ☐ Yes ☐ No
5. Does the waste represented by this waste profile sheet contain concentrations of regulated Polychlorinated Biphenyls (PCBs)? ☐ Yes ☑ No
   a. If yes, is disposal regulated under TSCA? ☐ Yes ☐ No
6. Does the waste contain untreated, regulated, medical or infectious waste? ☐ Yes ☑ No
7. Does the waste contain asbestos? ☐ Yes ☐ No If Yes, ☐ Friable ☐ Non Friable
8. Is this profile for remediation waste from a facility that is a major source of Hazardous Air Pollutants (Site Remediation NESHAP, 40 CFR 63 subpart GGGGG)? ☐ Yes ☑ No
   If yes, does the waste contain <500 ppmw VOHAPs at the point of determination? ☐ Yes ☐ No

E. Generator Certification (Please read and certify by signature below)

By signing this Generator's Waste Profile Sheet, I hereby certify that all:

1. Information submitted in this profile and all attached documents contain true and accurate descriptions of the waste material;
2. Relevant information within the possession of the Generator regarding known or suspected hazards pertaining to this waste has been disclosed to WM/the Contractor;
3. Analytical data attached pertaining to the profiled waste was derived from testing a representative sample in accordance with 40 CFR 261.20(c) or equivalent rules; and
4. Changes that occur in the character of the waste (i.e. changes in the process or new analytical) will be identified by the Generator and disclosed to WM (and the Contractor if applicable) prior to providing the waste to WM (and the Contractor if applicable).
5. Check all that apply:
   - ☑ Attached analytical pertains to the waste. Identify laboratory & sample ID #'s and parameters tested: Test America, 1065SC300A,B,C,D 1065SC301A,B,C,D # Pages: 56
   - ☐ Only the analyses identified on the attachment pertain to the waste (identify by laboratory & sample ID #'s and parameters tested). Attachment #: _____
   - ☐ Additional information necessary to characterize the profiled waste has been attached (other than analytical). Indicate the number of attached pages: _____
   - ☐ I am an agent signing on behalf of the Generator, and the delegation of authority to me from the Generator for this signature is available upon request.
   - ☐ By Generator process knowledge, the following waste is not a listed waste and is below all TCLP regulatory limits.

☐ Renewal for Profile Number: _____ Waste Approval Expiration Date: _____

A. Waste Generator Facility Information (must reflect location of waste generation/origin)

1. Generator Name: The Presidio Trust
2. Site Address: Building 1063
3. City/ZIP: San Francisco, 94129
4. State: CA
5. County: San Francisco
6. Contact Name/Title: Ryan seelbach
7. Email Address: rseelbach@presidiotrust.gov
8. Phone: 415 561 5082 9. FAX: 415 561 2132
10. NAICS Code: 712190
11. Generator USEPA ID #: CAR000386179
12. State ID# (if applicable): _____

B. Customer Information ☐ same as above

P. O. Number: 27-092

1. Customer Name: Engineering/Remediation Resouces Group
2. Billing Address: 185 Mason Circle
3. City, State and ZIP: Concord , CA, 94520
4. Contact Name: Tyson Appel
5. Contact Email: tyson.appel@errg.com
6. Phone: 925 250 4056 FAX: 925 969 0751
7. Transporter Name: _____
8. Transporter ID # (if appl.): _____
9. Transporter Address: _____
10. City, State and ZIP: _____

C. Waste Stream Information

1. DESCRIPTION

a. Common Waste Name: Soil with Lead
State Waste Code(s): 611, 181

b. Describe Process Generating Waste or Source of Contamination:
Removal of contaminated soil

c. Typical Color(s): brown, green, black

d. Strong Odor? ☐ Yes ☑ No Describe: _____

e. Physical State at 70°F: ☑ Solid ☐ Liquid ☐ Powder ☐ Semi-Solid or Sludge ☐ Other: _____

f. Layers? ☐ Single layer ☐ Multi- layer ☑ NA

g. Water Reactive? ☐ Yes ☑ No If Yes, Describe: _____

h. Free Liquid Range (%): _____ to _____ ☑ NA(solid)

i. pH Range: ☐ ≤2 ☐ 2.1-12.4 ☐ ≥12.5 ☑ NA(solid) ☐ Actual: _____

j. Liquid Flash Point: ☐ < 140°F ☐ ≥ 140°F ☑ NA(solid) ☐ Actual: _____

k. Flammable Solid: ☐ Yes ☑ No

l. Physical Constituents: List all constituents of waste stream - (e.g. Soil 0-80%, Wood 0-20%): ☑ (See Attached)

Constituents *(Total Composition Must be > 100%)*	Lower Range	Unit of Measure	Upper Range	Unit of Measure
1. Soil	95	%	100	%
2. Wood	0	%	1	%
3. scrap metal	0	%	1	%
4. Plastic	0	%	1	%
5. lead	0	ppm	100	ppm
6.				

2. ESTIMATED QUANTITY OF WASTE AND SHIPPING INFORMATION

a. ☑ Event ☐ Base/Ongoing (Check One)

b. Estimated Annual Quantity: 1000 ☐ Tons ☑ Cubic Yards ☐ Drums ☐ Gallons ☐ Other (specify): _____

c. Shipping Frequency: 2 days Units per ☐ Month ☐ Quarter ☐ Year ☑ One Time ☐ Other

d. Is this a U.S. Department of Transportation (USDOT) Hazardous Material? (If yes, answer e.) ☐ Yes ☑ No

e. USDOT Shipping Description (if applicable): _____

3. SAFETY REQUIREMENTS (Handling, PPE, etc.): Level D

Level III Data Validation Report

MACTEC

DATE: June 4, 2008
TO: Mary Jo Heassler, Senior Geologist
FROM: Kristen Carlyon, Senior Environmental Scientist
SUBJECT: Summary of Level III Data Validation – October 15, 2007 through May 13, 2008 Confirmation Soil Sampling, Building 1065 Presidio of San Francisco, California
PROJECT #: 4084075115

DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

This Appendix summarizes results of Level III review of chemical analytical results generated during the Building 1065 Area CAP Implementation at the Presidio of San Francisco, California. Soil and water samples were collected between October 15, 2007 and May 13, 2008 in support of the corrective actions to address soil and groundwater contamination that is related to or co-located with releases of petroleum hydrocarbons from past uses of the Site. Table 1 presents a list of each sample delivery group (SDG) and samples collected as part of this project.

It is noted that Level II cursory data review was performed on data packages prepared on rush turnaround and included review of 1) target compound lists, 2) detection limits, 3) holding times, 4) blank results, 5) surrogate recoveries, 6) laboratory control sample/laboratory control spike duplicate (LCS/LCSD) samples, 7) matrix spike/matrix spike duplicate (MS/MSD) samples, 8) laboratory duplicate samples, and 9) field quality control (QC) samples. The results of the Level II validation were summarized in Cursory Data Review Summary Reports that are included in Attachment 1, with the exception of the final three SDGs, 202203, 203210, and 203251, which were summarized with tables only. Level III validation includes review of these QC data plus the following additional laboratory QC data: 10) GC/MS tunes, 11) performance evaluation mix (PEM) standards, 12) ICP interference check standards, 13) ICP serial dilutions, 14) post-digest spikes, 15) initial calibrations, 16) continuing calibration verifications (CCV), and 17) internal standards. The Level III review for SDG 202203, 203210, and 203251 include both the Level II and Level III parameters listed above. Level III validation was performed in accordance with the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and

- *USEPA National Functional Guidelines for Chlorinated Dibenzo-p-Dioxins (CDDs) and Chlorinated Dibenzofurans (CDFs) Data Review*, September 2005, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan,* April, 2001.

The text of this Appendix summarizes by SDG only the additional findings from the Level III review that were not summarized in the Cursory Data Review Summary Reports, with the exception of the final three SDGs which include both the hereto unreported Level II and the Level III review. Table 2 presents qualifiers generated during Level III validation.

ADDITIONAL FINDINGS FROM LEVEL III REVIEW

SDG 198380

VOLATILE ORGANIC COMPOUNDS (Benzene, Toluene, Ethylbenzene, and Total Xylenes) by GC/MS (8260B)

Overall, the data are usable as reported. No further qualifications were required.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/6020/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for barium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065BC401 at 11%. The results for barium were qualified as estimated (J) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, molybdenum, and zinc failed the 75-125% project QC criteria in QC samples 1065BC401 MS/MSD at 37/36%, 72/67%, and passing/62%, respectively. The results for antimony, molybdenum, and zinc in the associated project samples were qualified as estimated (J).

SDG 198817 and 198818

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Additional qualifications were required for the reasons noted in Sections A and B.

A. **Initial Calibrations**

Initial calibration criteria were met for all calibration standards associated with the project samples, with the following exceptions:

1. The initial calibration analyzed on 10/23/07 on instrument MSVOA09 had one compound with a %RSD greater than the +/-20% acceptance criteria: vinyl acetate (23%). The result for vinyl acetate in sample 1065EX353RB354 was qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to initial calibration %RSD failures.

B. **Continuing Calibration Verifications**

Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 10/31/07 at 8:20 on instrument MSVOA05 had three compounds with %Ds exceeding the +/-20% acceptance criteria: vinyl acetate (-36%), 1,2,4-trichlorobenzene (-21%), and naphthalene (-41%). The non-detected results for the compounds listed above in sample TRIP BLANK were qualified as estimated (UJ).
2. The CCV standard analyzed on 10/31/07 at 14:04 on instrument MSVOA09 had two compounds with %Ds exceeding the +/-20% acceptance criteria: bromomethane (-31%) and carbon disulfide (-26%). The non-detected results for the compounds listed above in sample 1065EX353RB354 were qualified as estimated (UJ).
3. The CCV standard analyzed on 11/2/07 at 10:25 on instrument MSVOA12 had one compound with a %D exceeding the +/-20% acceptance criteria: trichlorofluoromethane (-21%). The non-detected results for trichlorofluoromethane in the associated samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7470A/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. Percent differences for barium, beryllium, chromium, cobalt, lead, nickel, and zinc failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX352[4.0] at 13%, 15%, 12%, 16%, 14%, 13%, and 14%, respectively. The results for the elements listed above were qualified as estimated (J/UJ) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, and nickel failed the 75-125% project QC criteria in QC samples 1065EX352[4.0] MS/MSD at 50/51%, 161%/passing, 64/35%, and 151/184%, respectively. The results for antimony and lead in the associated project samples were qualified as estimated (J/UJ) and the detected results for copper and nickel were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike recovery outliers.

SDG 198879

METALS (6010B/7470A)

Overall, the data are usable as reported. No further qualifications were required. It should be noted that the samples were analyzed using SW-846 Methods 6010B and 7470A instead of EPA Methods 200.7 and 245.1 which were specified in the Work Plan. In the reviewers opinion, the change in methodology does not impact the data.

GENERAL CHEMISTRY (150.1, 1664A, 420.1, SM4500CN-E, SM4500S2-D)

Overall, the data are usable as reported. No further qualifications were required.

SDG 198880

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Additional qualifications were required for the reasons noted in Section A.

A. **Continuing Calibration Verifications**

Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 11/2/07 at 10:25 on instrument MSVOA12 had one compound with a %D exceeding the +/-20% acceptance criteria: trichlorofluoromethane (-21%). The non-detected results for trichlorofluoromethane in the associated samples were qualified as estimated (UJ).
2. The CCV standard analyzed on 11/05/07 at 12:29 on instrument MSVOA12 had two compounds with %Ds exceeding the +/-20% acceptance criteria: isopropylbenzene (22%) and propylbenzene (21%). The detected results for isopropylbenzene and propylbenzene in sample 1065EX357[4.0] were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for beryllium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX359[4.0] at 17%. The results for beryllium were qualified as estimated (J) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, and zinc failed the 75-125% project QC criteria in QC samples 1065EX359[4.0] MS/MSD at 63/61%, passing/188, passing/160%, and 570/338%, respectively. The results for antimony, copper, and zinc in the associated project samples were qualified as estimated (J) and the detected result for lead in sample 1065EX357[4.0] was qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 198903

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)
Overall, the data are usable as reported. Additional qualifications were required for the reason noted in Section A.

A. **Continuing Calibration Verifications**
Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 11/2/07 at 9:15 on instrument MSVOA06 had one compound with a %D exceeding the +/-20% acceptance criteria: naphthalene (-21%). The results for naphthalene in the associated samples were qualified as estimated (UJ).
2. The CCV standard analyzed on 11/07/07 at 8:36 on instrument MSVOA06 had one compound with a %D exceeding the +/-20% acceptance criteria: 1,2-dibromo-3-chloropropane (-22%). The result for 1,2-dibromo-3-chloropropane in sample 1065EX362[5.5] was qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)
Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/6020/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for beryllium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX359[4.0] at 17%. The results for beryllium were qualified as estimated (J) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, mercury, and zinc failed the 75-125% project acceptance criteria in QC samples 1065EX359[4.0] MS/MSD at 63%/61%, passing/188%, passing/160%, 25%/-4%, and 570%/338%, respectively. The results for antimony, copper, lead, and zinc in the associated project sample were qualified as estimated (J). The post-digest spike failed for mercury and the results for mercury were qualified as estimated with a low bias (J-).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 199042

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Additional qualifications were required for the reason noted in Section A.

A. **Continuing Calibration Verifications**
Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 11/8/07 at 10:12 on instrument MSVOA012 had six compounds with %Ds exceeding the +/-20% acceptance criteria: trichlorofluoromethane (-27%), 1,1,1-trichloroethane (-24%), carbon tetrachloride (-31%), 1,2-dichloroethane (-23%), tetrachloroethene (-22%), and dibromochloromethane (-21%). The results for the compounds listed above in the associated samples were qualified as estimated (UJ).

2. The CCV standard analyzed on 11/07/07 at 8:36 on instrument MSVOA06 had one compound with a %D exceeding the +/-20% acceptance criteria: 1,2-dibromo-3-chloropropane (-22%). The result for 1,2-dibromo-3-chloropropane in sample 1065EX362[5.5] was qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for antimony failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX363[8.0] at 18%. The results for antimony were qualified as estimated (J/UJ) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, and mercury failed the 75-125% project QC criteria in QC samples 1065EX363[8.0] MS/MSD at 38/39%, 140%/passing, and 135%/passing, respectively. The post-spike for antimony and copper passed. The results for antimony and copper in the associated project samples were qualified as estimated (J). The results for mercury in the associated samples were qualified as estimated with a high bias (J+).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 199163

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Additional qualifications were required for the reason noted in Section A.

A. **Continuing Calibration Verifications**

Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 11/12/07 at 16:39 on instrument MSVOA012 had one compound with a %D exceeding the +/-20% acceptance criteria: Freon 113 (-22%). The results for Freon 113 in the associated samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were required for the reason noted in Section A.

A. **Initial Calibration Verification and Continuing Calibrations**

Continuing calibration criteria were met for all initial and continuing calibration standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 11/13/07 at 19:26 on instrument MSBNA02, had two compounds with %Ds greater than the +/-15 %D acceptance criteria: indeno(1,2,3-cd)pyrene (+22%) and dibenz(a,h)anthracene (+26%). The detected results for indeno(1,2,3-cd)pyrene and dibenz(a,h)anthracene in sample 1065EX342[5.0] were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for antimony failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX343[5.0] at 49%. The results for antimony were qualified as estimated (J/UJ) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, barium, copper, lead, and zinc failed the 75-125% project acceptance criteria in QC samples 1065EX343[5.0] MS/MSD

at 50%/50%, passing/143%, passing/309%, 220%/601%, and 179%/595%, respectively. The post-spike recoveries for copper, lead, and zinc passed, while the post-spike recoveries for antimony and barium failed low. The results for antimony in the associated project sample were qualified as estimated with a low bias (J-) and the detected results for barium, copper, lead, and zinc were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 199248

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. No further qualification was required.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/6020/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. Percent differences for barium, beryllium, chromium, cobalt, nickel, and zinc failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX367[4.0] at 13%, 33%, 13%, 19%, 17%, and 19%, respectively. The results for the analytes listed above were qualified as estimated (J/UJ) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, and thallium failed the 75-125% project acceptance criteria in QC samples 1065EX367[4.0] MS/MSD at 38%/40%, 55%/71%, 73%/passing, 71%/passing, 46%/57%, passing/9%, 70%/passing, 68%/passing, 71%/passing, and 67%/69%, respectively. The post-spike recoveries passed for all elements except copper. The results for antimony,

barium, cadmium, chromium, cobalt, lead, molybdenum, nickel, selenium, and thallium in the associated project sample were qualified as estimated (J/UJ). The results for copper were qualified as estimated with a low bias (J-).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 199433

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

SDG 200073

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. No further qualifications were required.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. No further qualifications were required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections A and B.

A. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. Percent differences for antimony, beryllium, molybdenum, zinc, and mercury failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065SD100[5.5] at 26%, 21%, 15%, 11%, and 69%, respectively. The detected results for the analytes listed above were qualified as estimated (J) in sample 1065SD100[5.5].

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, cadmium, nickel, silver, and vanadium failed the 75-125% project acceptance criteria in QC samples 1065SD100[5.5] MS/MSD at 42%/43%, 21%/35%, 20%/49%, 71%/59%, and 268%/passing, respectively. The post-spike recoveries passed. The results for antimony, cadmium, nickel, silver, and vanadium in the associated project sample were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 200520

VOLATILE ORGANIC COMPOUNDS (Benzene, Toluene, Ethylbenzene, and Total Xylenes) by GC (8021B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. No further qualification was required.

PESTICIDES (8081A)
Overall, the data are usable as reported. No further qualification was required.

ORGANOPHOSPHORUS PESTICIDES (8141A)
Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections A and B.

A. **Initial Calibrations**
Initial calibration criteria were met for all calibration standards associated with the project samples, with the following exceptions:

1. The initial calibration analyzed on 10/30/07 on instrument GC26, front channel, had one compound with a %RSD greater than the +/-20% acceptance criteria: stirophos (26%). The result for stirophos in sample 1065BC402 A-D COMP was qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to initial calibration %RSD failures.

B. **Initial Calibration Verification and Continuing Calibrations**
Continuing calibration criteria were met for all initial and continuing calibration verification standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed on 1/16/08 at 22:51 on instrument GC26, front channel, had two compound with %Ds exceeding the +/-15% acceptance criteria: demeton-S (-24.2%) and naled (-15.9%). The non-detected results for demeton-S and naled in the associated sample were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

CHLORINATED HERBICIDES (8151A)
Overall, the data are usable as reported. No further qualification was required.

METALS (6010B/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections A and B.

A. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for chromium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065BC402 A-D COMP at 12%. The detected result for chromium was qualified as estimated (J) in the associated sample.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony and copper the 75-125% project acceptance criteria in QC samples 1065BC402 A-D COMP MS/MSD at 36%/45% and 365%/passing, respectively. The post-spike recoveries passed. The detected results for antimony and copper were qualified as estimated (J) in the associated sample.

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDG 200684

VOLATILE ORGANIC COMPOUNDS (Benzene, Toluene, Ethylbenzene, and Total Xylenes) by GC/MS (8260B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. No further qualification was required.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. No further qualification was required.

METALS (6010B)
Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections A and B.

A. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for lead failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX301[8.5] at 30%. The results for lead were qualified as estimated (J) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

B. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for lead failed the 75-125% project acceptance criteria in QC samples 1065EX301[8.5] MS/MSD at passing/254%. The post-spike recovery for lead passed. The detected results for lead in the associated project samples were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

SDGs 201726, 201748, and 201749

VOLATILE ORGANIC COMPOUNDS (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B, C, and H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC431727 had detected levels of acetone and methylene chloride at 1.8 µg/Kg and 0.41 µg/Kg, respectively. The results for methylene chloride and naphthalene in the associated samples were changed to non-detect (U) since the values were less than ten times the blank amounts.

2. Aqueous method blank QC432699 had a detected level of sec-butylbenzene at 0.41 µg/L. Qualification was not required due to non-detected results in the associated samples.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. Percent recoveries for the surrogate, dibromofluoromethane, failed the 78-126% laboratory acceptance criteria in sample 1065EX303[7.0] and 1065EX304[7.5] at

129% and 127%, respectively. A percent recovery for the surrogate, bromofluorobenzene, failed the 80-121% laboratory acceptance criteria in sample DUP030608 at 123%. Samples 1065EX[7.0] and DUP030608 were nondetect for the compounds associated with the failing surrogates and qualification was not required.

See Table 2 of this report for a summary of qualifications due to surrogate recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed 3/07/08 at 11:46 on instrument MSVOA12 had one compound with a %D exceeding the ±20% acceptance criteria: Freon 12 (-23%). The results for Freon 12 in the associated samples were qualified as estimated (UJ).
2. The CCV standard analyzed 3/13/08 at 10:37 on instrument MSVOA06 had three compounds with %Ds exceeding the ±20% acceptance criteria: Freon 12 (-40%), chloromethane (-26%), and bromomethane (-23%). The results for the compounds listed above in the associated sample were qualified as estimated (UJ).
3. The CCV standard analyzed 3/11/08 at 10:33 on instrument MSVOA11 had one compound with a %D exceeding the ±20% acceptance criteria: Freon 12 (-33%). The result for Freon 12 in the associated sample was qualified as estimated (UJ).

   See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks associated with this sample delivery group, with the following exceptions:

1. Toluene was detected in equipment rinsate blank 1065EX303RB304 at a concentration of 0.2 µg/L. The associated samples were non-detect for toluene and qualification was not required.
2. Chloroform was detected in trip blank TB030608 at a concentration of 0.1 µg/L. The associated samples were non-detect for chloroform and qualification was not required.

L. **Reporting Limits**

The laboratory reporting limits for VOCs in soil and water matrices met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in a reporting limit above the CUL for Benzene in sample DUP030608. Samples were J-flagged to the MDL and MDLs meet required limits.
3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)
Overall, the data are usable as reported. Qualifications were required for the reason noted in Section H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control

spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exception:

1. The CCV standard analyzed 3/07/08 at 10:26 on instrument MSBNA02 had one compound with a %D exceeding the ±20% acceptance criteria: indeno(1,2,3-cd)pyrene (+21%). The detected results for indeno(1,2,3-cd)pyrene in samples 1065EX303[7.0] and DUP030608 were qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for PAHs in soil and water matrices met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. Qualifications were required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC431847 had a detected level of gasoline at 0.11 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) since those values were less than five times the blank amount.
2. Soil method blank QC432147 had a detected level of gasoline at 0.14 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) since those values were less than five times the blank amount.
3. Aqueous method blank QC432968 had a detected level of gasoline at 14 µg/L. The results for gasoline in the associated samples were changed to non-detect (U) since those values were less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for gasoline failed the 65-135% project-required acceptance criteria in QC samples 1065EX303[7.0] MS/MSD at 0%/0%. Reanalysis confirmed the matrix effects. No action is taken based solely on MS/MSD recoveries.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks associated with this sample delivery group.

K. **Reporting Limits**

The laboratory reporting limits for gasoline in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. Qualification was required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Aqueous method blank QC431974 had a detected level of diesel at 12 µg/L. The result for diesel in the associated sample was changed to non-detect (U) since that value was less than five times the blank amount.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for diesel and fuel oil/motor oil in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons in Sections B, E, and G.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC431682 had detected levels of antimony, chromium, cobalt, and zinc at 0.055 mg/Kg, 0.041 mg/Kg, 0.020 mg/Kg, and 0.037 mg/Kg, respectively. The results for antimony in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount. The results for chromium, cobalt, and zinc in the associated samples were greater than five times the blank amounts, and qualification was not required.
2. Soil method blank QC431869 had a detected level of cadmium at 0.0042 mg/Kg. The results for cadmium in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.
3. Aqueous method blank QC432038 had a detected level of zinc at 1.1 µg/L. The results for zinc the associated sample were changed to non-detect (U) if those values were less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, and zinc failed the 75-125% project QC criteria in QC samples 1065EX303[7.0] MS/MSD at 42/46%, passing/1760%, and passing/1431%, respectively. In addition, the RPDs for copper, lead, and zinc exceeded the 30% project-specific acceptance criteria at 164%, 37%, and 147%, respectively. Post-digest spike recoveries met the method-specific acceptance criteria of 75-125%. The results for antimony, copper, lead, and zinc in the associated project samples were qualified as estimated (J/UJ).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **ICP Interference Check Standards**
All QC criteria were met for the ICP interference check standards associated with the project samples.

G. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples.

H. **Initial and Continuing Calibrations**
All initial and continuing calibrations standards associated with the project samples met QC acceptance criteria.

I. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks associated with the project samples, with the following exceptions:

1. Barium and zinc were detected in equipment rinsate blank 1065EX303RB304 at concentrations of 0.2 µg/L and 0.97 µg/L, respectively. The results for barium and zinc in the associated samples were greater than five times the blank amounts, and qualification was not required. It should be noted that the result for zinc was previously changed to non-detect (U) in 1065EX303RB304 due to method blank contamination.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065EX303[7.0] and DUP0306, the RPD between the results for lead was greater than the 50% acceptance criteria at 86%.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the field duplicate pairs listed above may be due to the sample matrix, sampling or laboratory technique, or method defects. Since the effect of the quality of the data is not known, data is not qualified for field duplicate failure.

K. **Reporting Limits**

The laboratory reporting limits for metals in water and soil matrices met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SDG 202203

VOLATILE ORGANIC COMPOUNDS (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC434810 had a detected level of methylene chloride at 1.1 µg/Kg. The result for methylene chloride in the associated sample was changed to non-detect (U) since the value was less than ten times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed 3/27/08 at 09:33 on instrument MSVOA12 had eleven compounds with %Ds exceeding the ±20% acceptance criteria: trichlorofluoromethane (-31%), methyl tert-butyl ether (-21%), 2,2-dichloropropane (-27%), 1,1,1-trichloroethane (-21%), 1,2-dichloroethane (-38%), bromodichloromethane (-23%), trans-1,3-dichloropropene (-22%), 1,2,3-trichloropropane (-22%), 2-chlorotoluene (-21%), 1,2-dibromo-3-chloropropane (-43%), and hexachlorobutadiene (-28%). The results for the compounds listed above in the associated sample were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for VOCs in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the MDLs and MDLs meet required limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for acenaphthene and pyrene failed the laboratory in-house QC criteria in QC samples 1065EX315[5.0] MS/MSD at passing/253% and -46/1427%, respectively. In addition, the RPD for acenaphthene exceeded the 19% laboratory in-house QC limit at 103%. Organic data is not qualified based solely on the MS/MSD results.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for PAHs in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All

results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC435616 had a detected level of gasoline at 0.039 mg/Kg. The result for gasoline in the associated sample was changed to non-detect (U) since that value was less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections E and G.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, nickel, and zinc failed the 75-125% project QC criteria in QC samples 1065EX315[5.0] MS/MSD at 55/52%, 1254/641%, 143%/passing, 67/49%, and 923%/passing, respectively. In addition, the RPDs for copper, lead, and zinc exceeded the 30% project-specific acceptance criteria at 56%, 38%, and 104%, respectively. Post-digest spike recoveries met the method-specific acceptance criteria of 75-125% with the exception of nickel and zinc. The results for antimony, copper, lead, and zinc in the associated project sample were qualified as estimated (J/UJ) and the result for nickel was qualified as estimated with a low bias (J-).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **ICP Interference Check Standards**
All QC criteria were met for the ICP interference check standards associated with the project samples.

G. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exception:

1. A percent difference for beryllium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX315[5.0] at 19%. The detected result for chromium was qualified as estimated (J) in the associated sample.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

H. **Initial and Continuing Calibrations**
All initial and continuing calibrations standards associated with the project samples met QC acceptance criteria.

I. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SDG 203210

VOLATILE ORGANIC COMPOUNDS (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC44136 had detected levels of methylene chloride and naphthalene at 1.4 µg/Kg and 0.36 µg/Kg, respectively. The results for methylene chloride in the associated samples were changed to non-detect (U) since those values were less than ten times the blank amount. The results for naphthalene were non-detect in the associated samples and qualification was not required.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed 5/11/08 at 15:23 on instrument MSVOA04 had one compound with a %D exceeding the ±20% acceptance criteria: dichlorodifluoromethane (Freon 12) (-25%). The results Freon 12 in the associated samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for VOCs in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the MDLs and MDLs meet required limits.

2. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in all sample. Samples were J-flagged to the MDL and MDLs meet required limits.

3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were required for the reason noted in Section H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all ICV/CCV standards associated with the project samples, with the following exceptions:

1. The ICV standard analyzed 5/7/08 at 20:08 on instrument MSBNA03 had two compounds with %Ds exceeding the ±20% acceptance criteria: indeno(1,2,3-cd)pyrene (26%) and dibenz(a,h)anthracene (22%). The detected result for indeno(1,2,3-cd)pyrene in sample 1065EX368[8.0] was qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065EX370[8.0] and DUP050908, absolute differences between the results were greater than two times the reporting limit for several target compounds. The results for fluoranthene, pyrene, chrysene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, and benzo(g,h,i)perylene in the original sample were 17 µg/Kg, 23 µg/Kg, 16 µg/Kg, 41 µg/Kg, 19 µg/Kg, 27 µg/Kg, and 41 µg/Kg, respectively. The duplicate results were non-detect.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the results in the field duplicate pairs may be due to the sample matrix, sampling or laboratory technique, or method defects. Since the effect on the quality of data is not known, data is not qualified for field duplicate failures.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for PAHs in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. Qualifications were required for the reason noted in Sections B and C.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC441086 had a detected level of gasoline at 0.015 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. A percent recovery of 144% for the surrogate bromofluorobenzene was observed in sample 1065EX369[8.0]. The detected result was qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to surrogate recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons in Sections E and G.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC441350 had detected levels of selenium and zinc at 0.13 mg/Kg and 0.11 mg/Kg, respectively. The results for selenium and zinc in the associated samples were greater than five times the blank amounts or non-detect, and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. A percent recovery for antimony failed the 75-125% project QC criteria in QC samples 1065EX365[8.0] MS/MSD at 65/67%. The post-digest spike recovery for antimony met the method-specific acceptance criteria of 75-125%. The results for antimony in the associated project samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **ICP Interference Check Standards**
All QC criteria were met for the ICP interference check standards associated with the project samples.

G. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exception:

1. Percent differences for beryllium and lead failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX365[8.0] at 23% and 12%, respectively. The results for beryllium and lead were qualified as estimated (J) in the associated samples.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

H. **Initial and Continuing Calibrations**
All initial and continuing calibrations standards associated with the project samples met QC acceptance criteria.

I. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exception:

1. In field duplicates 1065EX370[8.0] and DUP050908, the absolute difference between the results for mercury were greater than two times the reporting limit of 0.028 mg/Kg. The original result for mercury was 0.43 mg/Kg and the duplicate result was 0.012 mg/Kg.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the results in the field duplicate pairs may be due to the sample matrix, sampling or laboratory technique, or method defects. Since the effect on the quality of data is not known, data is not qualified for field duplicate failures.

K. **Reporting Limits**
The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SDG 203251

VOLATILE ORGANIC COMPOUNDS (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC441448 had a detected level of methylene chloride at 1.4 µg/Kg. The result for methylene chloride in the associated sample was changed to non-detect (U) since the value was less than ten times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control

spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed 5/13/08 at 16:27 on instrument MSVOA04 had three compounds with %Ds exceeding the ±20% acceptance criteria: Freon 113 (-22%), methylene chloride (36%), and 1,2-dichloroethane (-21%). The results for Freon 113 and 1,2-dichloroethane in the associated sample were qualified as estimated (UJ). The sample results for methylene chloride were previously changed to non-detect (U) due to method blank contamination and no further qualification was required.

   See Table 2 of this report for a summary of qualifications due to CCV standard %D failures.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for VOCs in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the MDLs and MDLs meet required limits.

2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged “J” by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples.

I. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

L. **Reporting Limits**
The laboratory reporting limits for PAHs in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable,

due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC441677 had a detected level of gasoline at 0.075 mg/Kg. The result for gasoline in the associated sample was changed to non-detect (U) since that value was less than five times the blank amount.

See Table 2 of this report for a summary of qualifications due to method blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections E and G.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC441819 had detected levels of beryllium, copper, and thallium at 0.0064 mg/Kg, 0.06 mg/Kg, and 0.051 mg/Kg, respectively. The results for beryllium, copper and thallium in the associated sample were greater than five times the blank amounts and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. A percent recovery for antimony failed the 75-125% project QC criteria in QC samples 1065EX371[8.0] MS/MSD at 65/61%. The post-digest spike recovery met the method-specific acceptance criteria of 75-125%. The result for antimony in the associated project sample was qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **ICP Interference Check Standards**

All QC criteria were met for the ICP interference check standards associated with the project samples.

G. **ICP Serial Dilution**

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exception:

1. Percent differences for antimony, barium, beryllium, chromium, cobalt, copper, nickel, and vanadium failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX371[8.0] at 68%, 16%, 24%, 16%, 18%, 11%,

17%, and 15%, respectively. The detected results for the elements listed above were qualified as estimated (J) in the associated sample.

See Table 2 of this report for a summary of qualifications due to serial dilution outliers.

H. **Initial and Continuing Calibrations**
All initial and continuing calibrations standards associated with the project samples met QC acceptance criteria.

I. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

J. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

K. **Reporting Limits**
The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 2 summarizes the additional data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level III data validation, results are considered valid and usable for project purposes.

Table 2
Summary of Level III Data Validation Qualifiers
10/15/07 through 05/13/08

Sample ID	Lab ID	Analysis Method	Compound	CAS Number	Qualifier	Reason
DUP111207	199163-002	8260B	Freon 113	76-13-1	UJ	Continuing calibration verification percent difference failure
1065EX342[5.0]	199163-003	6010B	Antimony	7440-36-0	J-	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX342[5.0]	199163-003	6010B	Barium	7440-39-3	J	Matrix spike recovery exceeded acceptance criteria.
1065EX342[5.0]	199163-003	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX342[5.0]	199163-003	6010B	Lead	7439-92-1	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX342[5.0]	199163-003	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX342[5.0]	199163-003	8260B	Freon 113	76-13-1	UJ	Continuing calibration verification percent difference failure
1065EX342[5.0]	199163-003	8270SIM	Dibenzo(a,h)anthracene	53-70-3	J	Continuing calibration verification percent difference failure
1065EX342[5.0]	199163-003	8270SIM	Indeno(1,2,3-cd)pyrene	193-39-5	J	Continuing calibration verification percent difference failure
1065EX343[5.0]	199163-004	6010B	Antimony	7440-36-0	J-	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX343[5.0]	199163-004	6010B	Barium	7440-39-3	J	Matrix spike recovery exceeded acceptance criteria.
1065EX343[5.0]	199163-004	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX343[5.0]	199163-004	6010B	Lead	7439-92-1	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX343[5.0]	199163-004	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX344[5.0]	199163-005	6010B	Antimony	7440-36-0	J-	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX344[5.0]	199163-005	6010B	Barium	7440-39-3	J	Matrix spike recovery exceeded acceptance criteria.
1065EX344[5.0]	199163-005	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX344[5.0]	199163-005	6010B	Lead	7439-92-1	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX344[5.0]	199163-005	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX344[5.0]	199163-005	8260B	Freon 113	76-13-1	UJ	Continuing calibration verification percent difference failure
1065EX345[5.0]	199163-006	6010B	Antimony	7440-36-0	J-	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX345[5.0]	199163-006	6010B	Barium	7440-39-3	J	Matrix spike recovery exceeded acceptance criteria.
1065EX345[5.0]	199163-006	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX345[5.0]	199163-006	6010B	Lead	7439-92-1	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX345[5.0]	199163-006	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX345[5.0]	199163-006	8260B	Freon 113	76-13-1	UJ	Continuing calibration verification percent difference failure
1065EX367[4.0]	199248-002	6010B	Antimony	7440-36-0	J	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Barium	7440-39-3	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Beryllium	7440-41-7	J	Serial dilution %D outside acceptance criteria
1065EX367[4.0]	199248-002	6010B	Cadmium	7440-43-9	J	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Chromium	7440-47-3	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Cobalt	7440-48-4	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Copper	7440-50-8	J-	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Lead	7439-92-1	UJ	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Nickel	7440-02-0	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Selenium	7782-49-2	J	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Thallium	7440-28-0	UJ	Matrix spike recovery exceeded acceptance criteria.
1065EX367[4.0]	199248-002	6010B	Zinc	7440-66-6	J	Serial dilution %D outside acceptance criteria
1065SD100[5.5]	200073-001	6010B	Antimony	7440-36-0	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065SD100[5.5]	200073-001	6010B	Beryllium	7440-41-7	J	Serial dilution %D outside acceptance criteria
1065SD100[5.5]	200073-001	6010B	Cadmium	7440-43-9	J	Matrix spike recovery exceeded acceptance criteria.

Table 2
Summary of Level III Data Validation Qualifiers
10/15/07 through 05/13/08

Sample ID	Lab ID	Analysis Method	Compound	CAS Number	Qualifier	Reason
1065SD100[5.5]	200073-001	6010B	Molybdenum	7439-98-7	J	Serial dilution %D outside acceptance criteria
1065SD100[5.5]	200073-001	6010B	Nickel	7440-02-0	J	Matrix spike recovery exceeded acceptance criteria.
1065SD100[5.5]	200073-001	6010B	Silver	7440-22-4	J	Matrix spike recovery exceeded acceptance criteria.
1065SD100[5.5]	200073-001	6010B	Vanadium	7440-62-2	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065SD100[5.5]	200073-001	6010B	Zinc	7440-66-6	J	Serial dilution %D outside acceptance criteria
1065SD100[5.5]	200073-001	7470A	Mercury	7439-97-6	J	Serial dilution %D outside acceptance criteria
1065BC402 A-D COMP	200520-005	6010B	Antimony	7440-36-0	J	Matrix spike recovery exceeded acceptance criteria.
1065BC402 A-D COMP	200520-005	6010B	Chromium	7440-47-3	J	Serial dilution %D outside acceptance criteria
1065BC402 A-D COMP	200520-005	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065BC402 A-D COMP	200520-005	8141A	Demeton-S	126-75-0	UJ	Continuing calibration verification percent difference failure
1065BC402 A-D COMP	200520-005	8141A	Naled	300-76-5	UJ	Continuing calibration verification percent difference failure
1065BC402 A-D COMP	200520-005	8141A	Stirophos	961-11-5	UJ	Initial calibration relative standard deviation failure
1065EX301[8.5]	200684-001	6010B	Lead	7439-92-1	J	Matrix spike %R and RPD and serial dilution %D exceeded acceptance criteria.
1065EX302[8.5]	200684-002	6010B	Lead	7439-92-1	J	Matrix spike %R and RPD and serial dilution %D exceeded acceptance criteria.
1065EX303[7.0]	201726-001	6010B	Antimony	7440-36-0	UJ	Blank contamination; Matrix spike recovery exceeded acceptance criteria
1065EX303[7.0]	201726-001	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX303[7.0]	201726-001	6010B	Lead	7439-92-1	J	Matrix spike RPD exceeded acceptance criteria.
1065EX303[7.0]	201726-001	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX303[7.0]	201726-001	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX303[7.0]	201726-001	8270SIM	Indeno(1,2,3-cd)pyrene	193-39-5	J	Continuing calibration verification percent difference failure
1065EX304[7.5]	201726-002	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery exceeded acceptance criteria.
1065EX304[7.5]	201726-002	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX304[7.5]	201726-002	6010B	Lead	7439-92-1	J	Matrix spike RPD exceeded acceptance criteria.
1065EX304[7.5]	201726-002	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX304[7.5]	201726-002	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX304[7.5]	201726-002	8260B	Acetone	67-64-1	J	Surrogate recovery was outside control limits.
DUP030608	201726-003	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery exceeded acceptance criteria.
DUP030608	201726-003	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
DUP030608	201726-003	6010B	Lead	7439-92-1	J	Matrix spike RPD exceeded acceptance criteria.
DUP030608	201726-003	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
DUP030608	201726-003	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
DUP030608	201726-003	8270SIM	Indeno(1,2,3-cd)pyrene	193-39-5	J	Continuing calibration verification percent difference failure
1065EX305[6.0]	201748-001	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX305[6.0]	201748-001	8260B	Acetone	67-64-1	U	Blank contamination.
1065EX305[6.0]	201748-001	8260B	Dichlorodifluoromethane	75-71-8	UJ	Continuing calibration verification percent difference failure
1065EX305[6.0]	201748-001	8260B	Methylene chloride	75-09-2	U	Blank contamination.
1065EX306[6.0]	201748-002	6010B	Cadmium	7440-43-9	U	Blank contamination.
1065EX306[6.0]	201748-002	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX306[6.0]	201748-002	8260B	Acetone	67-64-1	U	Blank contamination.
1065EX306[6.0]	201748-002	8260B	Dichlorodifluoromethane	75-71-8	UJ	Continuing calibration verification percent difference failure
1065EX306[6.0]	201748-002	8260B	Methylene chloride	75-09-2	U	Blank contamination.

Table 2
Summary of Level III Data Validation Qualifiers
10/15/07 through 05/13/08

Sample ID	Lab ID	Analysis Method	Compound	CAS Number	Qualifier	Reason
1065EX303RB304	201749-001	6010B	Zinc	7440-66-6	U	Blank contamination.
1065EX303RB304	201749-001	8015M	Diesel C12-C24 (SGCU)	S-FOC12C24	U	Blank contamination.
1065EX303RB304	201749-001	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX303RB304	201749-001	8260B	Bromomethane	74-83-9	UJ	Continuing calibration verification percent difference failure
1065EX303RB304	201749-001	8260B	Chloromethane	74-87-3	UJ	Continuing calibration verification percent difference failure
1065EX303RB304	201749-001	8260B	Dichlorodifluoromethane	75-71-8	UJ	Continuing calibration verification percent difference failure
TB030608	201749-002	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
TB030608	201749-002	8260B	Dichlorodifluoromethane	75-71-8	UJ	Continuing calibration verification percent difference failure
1065EX315[5.0]	202203-001	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery exceeded acceptance criteria.
1065EX315[5.0]	202203-001	6010B	Beryllium	7440-41-7	J	Serial dilution %D outside acceptance criteria
1065EX315[5.0]	202203-001	6010B	Copper	7440-50-8	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX315[5.0]	202203-001	6010B	Lead	7439-92-1	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX315[5.0]	202203-001	6010B	Nickel	7440-02-0	J-	Matrix spike recovery exceeded acceptance criteria.
1065EX315[5.0]	202203-001	6010B	Zinc	7440-66-6	J	Matrix spike recovery and RPD exceeded acceptance criteria.
1065EX315[5.0]	202203-001	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX315[5.0]	202203-001	8260B	1,1,1-Trichloroethane	71-55-6	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	1,2,3-Trichloropropane	96-18-4	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	1,2-Dibromo-3-chloropropane	96-12-8	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	1,2-Dichloroethane	107-06-2	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	2,2-Dichloropropane	594-20-7	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	2-Chlorotoluene	95-49-8	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	Bromodichloromethane	75-27-4	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	Hexachlorobutadiene	87-68-3	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	Methylene chloride	75-09-2	U	Blank contamination.
1065EX315[5.0]	202203-001	8260B	Methyl-tert-butyl ether	1634-04-4	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	trans-1,3-Dichloropropene	10061-02-6	UJ	Continuing calibration verification percent difference failure.
1065EX315[5.0]	202203-001	8260B	Trichlorofluoromethane	75-69-4	UJ	Continuing calibration verification percent difference failure.
1065EX368[8.0]	203210-001	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery outside acceptance criteria.
1065EX368[8.0]	203210-001	6010B	Beryllium	7440-41-7	J	Serial dilution percent difference outside acceptance criteria.
1065EX368[8.0]	203210-001	6010B	Lead	7439-92-1	J	Serial dilution percent difference outside acceptance criteria.
1065EX368[8.0]	203210-001	8260B	Dichlorodifluoromethane	75-71-8	UJ	Associated initial/continuing calibration showed elevated %D for compound.
1065EX368[8.0]	203210-001	8260B	Methylene chloride	75-09-2	U	Blank contamination.
1065EX368[8.0]	203210-001	8270SIM	Indeno(1,2,3-cd)pyrene	193-39-5	J	Associated initial/continuing calibration showed elevated %D for compound.
1065EX369[8.0]	203210-002	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery outside acceptance criteria.
1065EX369[8.0]	203210-002	6010B	Beryllium	7440-41-7	J	Serial dilution percent difference outside acceptance criteria.
1065EX369[8.0]	203210-002	6010B	Lead	7439-92-1	J	Serial dilution percent difference outside acceptance criteria.
1065EX369[8.0]	203210-002	8260B	Dichlorodifluoromethane	75-71-8	UJ	Associated initial/continuing calibration showed elevated %D for compound.
1065EX369[8.0]	203210-002	8260B	Methylene chloride	75-09-2	U	Blank contamination.
1065EX369[8.0]	203210-002	8015M	TPH Gasoline (C7-C12)	8006-61-9	J	Surrogate recovery was outside control limits.
1065EX370[8.0]	203210-003	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery outside acceptance criteria.
1065EX370[8.0]	203210-003	6010B	Beryllium	7440-41-7	J	Serial dilution percent difference outside acceptance criteria.

Table 2
Summary of Level III Data Validation Qualifiers
10/15/07 through 05/13/08

Sample ID	Lab ID	Analysis Method	Compound	CAS Number	Qualifier	Reason
1065EX370[8.0]	203210-003	6010B	Lead	7439-92-1	J	Serial dilution percent difference outside acceptance criteria.
1065EX370[8.0]	203210-003	8260B	Dichlorodifluoromethane	75-71-8	UJ	Associated initial/continuing calibration showed elevated %D for compound.
1065EX370[8.0]	203210-003	8260B	Methylene chloride	75-09-2	U	Blank contamination.
1065EX370[8.0]	203210-003	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
DUP050908	203210-004	6010B	Antimony	7440-36-0	UJ	Matrix spike recovery outside acceptance criteria.
DUP050908	203210-004	6010B	Beryllium	7440-41-7	J	Serial dilution percent difference outside acceptance criteria.
DUP050908	203210-004	6010B	Lead	7439-92-1	J	Serial dilution percent difference outside acceptance criteria.
DUP050908	203210-004	8260B	Dichlorodifluoromethane	75-71-8	UJ	Associated initial/continuing calibration showed elevated %D for compound.
DUP050908	203210-004	8260B	Methylene chloride	75-09-2	U	Blank contamination.
DUP050908	203210-004	8015M	TPH Gasoline (C7-C12)	8006-61-9	U	Blank contamination.
1065EX371[8.0]	203251-003	6010B	Antimony	7440-36-0	J	Matrix spike %R and serial dilution %D exceeded acceptance criteria.
1065EX371[8.0]	203251-003	6010B	Barium	7440-39-3	J	Serial dilution %D outside acceptance criteria
1065EX371[8.0]	203251-003	6010B	Beryllium	7440-41-7	J	Serial dilution %D outside acceptance criteria
1065EX371[8.0]	203251-003	6010B	Chromium	7440-47-3	J	Serial dilution %D outside acceptance criteria
1065EX371[8.0]	203251-003	6010B	Cobalt	7440-48-4	J	Serial dilution %D outside acceptance criteria

Level II Data Validation Reports

MACTEC

DATE: October 26, 2007
TO: Mary Jo Heassler, Senior Geologist
FROM: Kristen Carlyon, Senior Environmental Scientist
SUBJECT: Summary of Level II Data Validation – October 15, 2007 Backfill Confirmation Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 198380

SAMPLING DATE: 10/15/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065BC400	198380-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 6020, 7471A
1065BC401	198380-002	EPA 8260B, 8270C-SIM, 8015B, 6020, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)- BTXE

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC411433 had a detected level of naphthalene at 1.2 µg/Kg. The result for naphthalene in the associated sample was greater than five times the amount found in the blank and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exception:

1. The percent recoveries for acenaphthene and pyrene failed the in-house QC limits in QC sample 198257-006MSD at 21% and -10%, respectively. The parent sample was not related to the project samples and qualification of project samples was not required (Batch 130758). It should be noted that surrogate recoveries in QC sample 198257-006MSD were less than the in-house QC limits indicating extraction problems.
2. The relative percent differences (RPDs) for acenaphthene and pyrene failed the in-house QC limits in QC samples 198257-006MS/MSD at 124% and 109%, respectively. The parent sample was not related to the project samples and qualification of project samples was not required (Batch 130758).

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC410702 had a detected level of gasoline at a concentration of 0.024 mg/Kg. The results for gasoline in the associated samples were greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC411245 had a detected level of diesel at a concentration of 0.19 mg/Kg. The result for diesel in the associated sample was greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exception:

1. A percent recovery for diesel failed the 65-135% project QC criteria in QC sample 198326-020 MS at 189%/(passing). A relative percent difference failed the 35% project QC criterion in samples 198326-020 MS/MSD at 61%. The parent sample was not related to the project samples and qualification of project samples was not required (Batch 130878).

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/6020/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons in Section E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC411394 had detected levels of antimony, arsenic, chromium, cobalt, lead, molybdenum, silver and vanadium at 0.0037 mg/Kg, 0.010 mg/Kg, 0.052 mg/Kg, 0.0064 mg/Kg, 0.010 mg/Kg, 0.015 mg/Kg, 0.0045 mg/Kg, and 0.020 mg/Kg, respectively. The results for antimony, arsenic, chromium, cobalt, lead, molybdenum, silver and vanadium in the associated sample were greater than five times the blank amounts, and qualification was not required.

2. Solid method blank QC411177 had detected levels of chromium and zinc at 0.032 mg/Kg and 0.078 mg/Kg, respectively. The results for chromium and zinc in the associated sample were greater than five times the blank amounts, and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, molybdenum, and zinc failed the 75-125% project QC criteria in QC samples 1065BC401 MS/MSD at 37%/36%, 72%/67%, and passing/62%, respectively. The results for antimony, molybdenum, and zinc in the associated project sample were qualified as estimated (J-) (Batch 130746).See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

2. Percent recoveries for antimony failed the 75-125% project QC criteria in QC samples 198453-002 MS/MSD at 56%/54%. The parent sample was not related to the project samples and qualification of project samples was not required (Batch 130692).

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – October 30, 2007 Soil Confirmation Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 198818

SAMPLING DATE: 10/30/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX350[4.0]	198818-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and C.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Aqueous method blank QC413031 had detected levels of bromomethane, 1,3-dichlorobenzene, 1,4-dichlorobenzene, and naphthalene at 0.4 µg/L, 0.05 µg/L, 0.1 µg/L, and 0.5 µg/L, respectively. The results for bromomethane, 1,3-dichlorobenzene, 1,4-dichlorobenzene, and naphthalene in the associated sample were non-detect and qualification was not required.

2. Soil method blank QC413225 had detected levels of acetone and methylene chloride at 1.8 µg/Kg and 15 µg/Kg, respectively. The results for acetone and methylene chloride in the associated sample were less than ten times the blank amounts and changed to non-detect (U).

3. Soil method blank QC413263 had a detected level of methylene chloride at 0.64 µg/Kg. The result for methylene chloride in the associated sample was less than ten times the blank amount and changed to non-detect (U).

4. Soil method blank QC413434 had detected levels of acetone and methylene chloride at 1.8 µg/Kg and 1.2 µg/Kg, respectively. The results for acetone and methylene chloride in the associated samples were changed to non-detect (U) if the results were less than ten times the blank amounts.

5. Soil method blank QC413866 had detected levels of acetone and methylene chloride at 1.1 µg/Kg and 5.5 µg/Kg, respectively. The results for acetone and methylene chloride in the associated sample were less than ten times the blank amounts and changed to non-detect (U).

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. Percent recoveries for the surrogate, bromofluorobenzene, failed the 80-122% laboratory acceptance criteria in samples 1065EX350[4.0], 1065EX352[4.0], and 1065EX355[4.0] at 128%, 131%, and 127%, respectively. The detected results associated with this surrogate were qualified as estimated (J).

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks identified within this sample delivery group, with the following exceptions:

1. Equipment rinsate blank 1065EX353RB354 had a detected level of methylene chloride at 0.6 µg/L. The results for methylene chloride in the

associated samples were less than ten times the blank amount and were changed to non-detect (U).

2. Trip blank TB103007 had detected levels for acetone and methylene chloride at 1.2 µg/L and 0.4 µg/L, respectively. The results for acetone and methylene chloride in the associated samples were less than ten times the blank amounts and changed to non-detect (U).

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil and water matrices met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. Samples 1065EX350[4.0], DUP103007, 1065EX352[4.0], and 1065EX355[4.0] were analyzed at dilutions due to the presence of total petroleum hydrocarbons. The reporting limits were raised by the dilution factors and some sample results were non-detect at the raised reporting limits.
3. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in sample 1065EX354[4.0]. Samples were J-flagged to the MDL and MDLs meet required limits.
4. It should be noted that the reporting limits for some soils were raised due to limited sample size collected in the encore devices. This resulted in reporting limits above the CUL for Benzene in samples 1065EX353[4.0] and 1065EX356[4.0]. Samples were J-flagged to the MDL and MDLs meet required limits.
5. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported for the preliminary results.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil and water matrices met the project-required reporting limits, with the following exceptions:

1. Some samples were analyzed at dilutions due to the nature of the extracts. The reporting limits were raised by the dilutions factors and some sample results were non-detect at the raised reporting limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
3. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)
Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B and C.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC412983 had a detected level of gasoline at a concentration of 0.021 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. The percent recoveries for the surrogates, trifluorotoluene (TFT) and bromofluorobenzene (BFB) failed the 65-135% project acceptance criteria in several project samples. The detected results for gasoline were qualified as estimated (J). The following table lists the project samples that required qualification due to these QC failures.

Project Sample ID	Laboratory ID	TFT %Recovery	BFB %Recovery
1065EX350[4.0]	198818-001	209%	293%
DUP103007	198818-002	208%	317%
1065EX352[4.0]	198818-004	143%	351%
1065EX355[4.0]	198818-006	143%	371%

See Table 1 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Aqueous method blank had detected levels of antimony, silver, and zinc at 2.2 µg/L, 0.94 µg/L, and 5.7 µg/L, respectively. The results for antimony, silver, and zinc in the associated sample were changed to non-detect (U) if those values were less than five times the blank amounts.

2. Solid method blank QC413007 had detected levels of chromium, lead, and selenium at 0.049 mg/Kg, 0.12 mg/Kg, and 0.2 mg/Kg, respectively. The results for chromium, lead, and selenium in the associated samples were changed to non-detect (U) if those values were less than five times the blank amounts.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, and nickel failed the 75-125% project acceptance criteria in QC samples 1065EX352[4.0] MS/MSD at 50%/51%, 161%/passing, 64%/35%, and 151%/184%, respectively. The results for antimony and lead in the associated project sample were qualified as estimated with a low bias (J-) and the detected results for copper and nickel were qualified as estimated with a high bias (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank associated with the project samples, with the following exceptions:

1. Equipment rinsate blank 1065EX353RB354 had detected levels of barium and copper at 1.0 µg/L and 0.92 µg/L, respectively. The values were converted to solid matrix units and the project soil samples were evaluated for blank contamination. The results for barium and copper in the associated soil samples were greater than five times the blank amounts and qualification was not required.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065EX350[4.0] and DUP103007, the relative percent differences (RPDs) between the detected results failed the 50% acceptance criteria for barium and lead at 117% and 72%, respectively.

The analysis of the field duplicate samples is a measure of both field and analytical precision. Since the effect on the quality of the data is unknown, data have not been qualified as a result of field duplicate failure.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but

quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 198879

SAMPLING DATE: 10/31/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065DE210	198879-001	EPA 6010B/7470A, 150.1, 1664A, 420.1, SM4500CN-E, SM4500S2-D
DUP103107	198879-002	EPA 6010B/7470A, 150.1, 1664A, 420.1, SM4500CN-E, SM4500S2-D

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

METALS (6010B/7470A)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The 6-month holding time criteria was met for method 6010B and the 28-day holding time criteria was met for method 7470A project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

F. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065DE210 and DUP103107, the relative percent difference (RPD) between the detected results failed the 50% acceptance criteria for copper at 74%.

The analysis of the field duplicate samples is a measure of both field and analytical precision. Since the effect on the quality of the data is unknown, data have not been qualified as a result of field duplicate failure.

G. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in water matrix met the project-required reporting limits.

GENERAL CHEMISTRY (150.1, 1664A, 420.1, SM4500CN-E, SM4500S2-D)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The 7-day technical holding time for dissolved sulfide, the 14-day technical holding time criteria for cyanide, and the 28-day technical holding time criteria for oil and grease and total phenols were met for project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
QC criteria were met for the laboratory duplicate samples associated with the project samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

F. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

G. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for general chemistry parameters in water matrix samples met the project-required reporting limits.

SUMMARY

Qualification was not required for project samples included in the data package.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 198880

SAMPLING DATE: 10/31/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX357[4.0]	198880-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX358[4.0]	198880-002	EPA 8260B, 8270C-SIM, 8015B, 6010B,

		7471A
TB103107	198880-003	EPA 8260B, 8015B
1065EX357RB358	198880-004	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7470A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and C.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Aqueous method blank QC413783 had detected levels of bromomethane, acetone, methylene chloride, benzene, 1,2,4-trichlorobenzene, and naphthalene at 0.8 µg/L, 0.6 µg/L, 0.2 µg/L, 0.04 µg/L, 0.2 µg/L, and 0.1 µg/L, respectively. The results for bromomethane, acetone, methylene chloride, and benzene in the associated samples were less than five times (ten times for common lab contaminants) the blank amounts and changed to non-detect (U). The results for 1,2,4-trichlorobenzene and naphthalene in the associated samples were non-detect and qualification was not required.

2. Soil method blank QC413434 had detected levels of acetone and methylene chloride at 1.8 µg/Kg and 1.2 µg/Kg, respectively. The results for acetone and methylene chloride in the associated sample were less than ten times the blank amounts and changed to non-detect (U).

3. Although not detected in the associated method blank, acetone and methylene chloride have been commonly found as contaminants in many laboratories. It is the judgement of the data reviewer that the acetone and methylene chloride detected in sample 1065EX357[4.0] are artifacts introduced during dilution. The results for acetone and methylene chloride were qualified as non-detect (U) in sample 1065EX357[4.0].

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. A percent recovery for the surrogate, bromofluorobenzene, failed the 80-122% laboratory acceptance criteria in sample 1065EX357[4.0] at 131%. The detected results associated with the surrogate, bromofluorobenzene, were qualified as estimated (J).

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for field QC blanks not identified within this sample delivery group, with the following exceptions:

1. Equipment rinsate blank 1065EX357RB358 had detected levels of isopropylbenzene, propylbenzene, sec-butylbenzene, para-isopropyl toluene, and n-butylbenzene at 0.1 µg/L, 0.2 µg/L, 0.2 µg/L, 0.2 µg/L, and 0.3 µg/L, respectively. The results in the associated samples were greater than five times the blank amount or non-detect and qualification was not required.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil and water matrices met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. Sample 1065EX357[4.0] was analyzed at a dilution due to the presence of total petroleum hydrocarbons. The reporting limits were raised by the dilution factor and some sample results were non-detect at the raised reporting limits.
3. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in sample 1065EX358[4.0]. Samples were J-flagged to the MDL and MDLs meet required limits.

4. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
5. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil and water matrices met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualification was required for the reasons noted in Sections C and H.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC413919 had a detected level of gasoline at a concentration of 0.019 mg/Kg. The results for gasoline in the associated samples were greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. A percent recovery for the surrogate, bromofluorobenzene, failed the 80-122% laboratory acceptance criteria in sample 1065EX357[4.0] at 248%. The detected result for gasoline was qualified as estimated (J).

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**

Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for field QC blanks identified within this sample delivery group, with the following exceptions:

1. Equipment rinsate blank 1065EX357RB358 had a detected level of gasoline at 31 µg/L. The result for gasoline was converted to soil matrix units and the project samples were evaluated for blank contamination. The result for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

2. Trip blank TB103107 had had a detected level of gasoline at 27 µg/L. The result for gasoline was converted to soil matrix units and the project samples were evaluated for blank contamination. The result for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC413727 had a detected level of diesel at a concentration of 0.34 mg/Kg. The result for diesel in the associated sample was greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections B, E, and F.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Aqueous method blank QC414109 had detected levels of lead and thallium at 1.2 µg/L and 1.6 µg/L, respectively. The result for thallium in the associated sample was less than five times the blank amount and changed to non-detect (U). The result for lead in the associated sample was non-detect and no qualification was required.

2. Solid method blank QC413589 had detected levels of beryllium, chromium, copper, lead, molybdenum, and silver at 0.0026 mg/Kg, 0.025 mg/Kg, 0.056 mg/Kg, 0.077 mg/Kg, 0.026 mg/Kg, and 0.060 mg/Kg, respectively. The result for silver in sample 1065EX358[4.0] was less than five times the blank amount and was changed to non-detect (U). The results for beryllium, chromium, copper, lead, and molybdenum in the associated samples were greater than five times the blank amounts or non-detect, and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, and zinc failed the 75-125% project QC criteria in QC samples 1065EX359[4.0] MS/MSD at 63%/61%, (passing)/188%, passing/160%, and 570%/338%, respectively. The results for antimony in the associated project samples were qualified as estimated (J-). The detected results for copper, lead, and zinc were qualified in the associated samples as estimated (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank associated with the project samples, with the following exceptions:

1. Equipment rinsate blank 1065EX357RB358 had detected levels of arsenic, barium, beryllium, chromium, copper, molybdenum, selenium, and vanadium at 14 µg/L, 47 µg/L, 0.60 µg/L, 3.7 µg/L, 3.7 µg/L, 2.5 µg/L, 7.7 µg/L, and 3.9 µg/L, respectively. The values were converted to solid matrix units and the project soil samples were evaluated for blank contamination. The results for arsenic and beryllium in the associated soil samples were changed to non-detect (U) if those values were less than five times the blank amount. The results for barium, chromium, copper, molybdenum, selenium, and vanadium in the associated soil samples were greater than five times the blank amounts or non-detect and qualification was not required.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

1065EX357RB358	198880-004	8260B	Acetone	67-64-1	U	Blank contamination.
1065EX357RB358	198880-004	8260B	Benzene	71-43-2	U	Blank contamination.
1065EX357RB358	198880-004	8260B	Methylene chloride	75-09-2	U	Blank contamination.

MACTEC

DATE: November 14, 2007 (revised)
TO: Mary Jo Heassler, Senior Geologist
FROM: Kristen Carlyon, Senior Environmental Scientist
SUBJECT: Summary of Level II Data Validation – November 1, 2007 Soil Confirmation Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 198903 (Revised to include sample -007)

SAMPLING DATE: 11/01/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX359[4.0]	198903-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX360[4.0]	198903-002	EPA 8260B, 8270C-SIM, 8015B, 6010B,

		7471A
DUP110107	198903-003	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX360RB361	198903-004	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
TB110107	198903-005	EPA 8260B, 8015B
1065EX361[4.5]	198903-006	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX362[5.5]	198903-007	EPA 8260B, 8270C-SIM, 8015B, 6020, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Aqueous method blank QC413881 had detected levels of acetone, methylene chloride, and benzene at 0.8 µg/L, 0.3 µg/L, and 0.03 µg/L, respectively. The results for acetone and methylene chloride in the associated samples were less than ten times the blank amounts and were changed to non-detect (U). The results for benzene in the associated samples were non-detect and qualification was not required.

2. Soil method blank QC413433 had a detected level of acetone at 0.91 µg/Kg. The results for acetone in the associated samples were less than ten times the blank amounts and changed to non-detect (U).

3. Soil method blank QC414072 had a detected level of methylene chloride at 2.9 µg/Kg. The result for methylene chloride in the associated sample was less than ten times the blank amount and changed to non-detect (U).

See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil and water matrices met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in samples 1065EX359[4.0] and 1065EX361[4.5]. Samples were J-flagged to the MDL and MDLs meet required limits.
3. It should be noted that the reporting limits for some soils were raised due to limited sample size collected in the encore devices. This resulted in reporting limits above the CUL for Benzene in sample 1065EX362[5.5]. Samples were J-flagged to the MDL and MDLs meet required limits.
4. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section H.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group, with the following exception:

1. Naphthalene and 2-methylnaphthalene were detected in equipment rinsate blank 1065EX360RB361 at concentrations of 0.02 µg/L and 0.01 µg/L, respectively. The results for naphthalene and 2-methylnaphthalene were converted to soil matrix units and the project soils were evaluated for blank contamination. The results for naphthalene and 2-methylnaphthalene were changed to non-detect (U) if those values were less than five times the blank amount. See Table 1 of this report for a summary of qualifications due to blank contamination.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil and water matrices met the project-required reporting limits, with the following exceptions:

1. Some samples were analyzed at dilutions due to the nature of the extracts. The reporting limits were raised by the dilutions factors and some sample results were non-detect at the raised reporting limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
3. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC413919 had a detected level of gasoline at a concentration of 0.019 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount. See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blanks identified within this sample delivery group, with the following exceptions:

1. Equipment rinsate blank 1065EX360RB361 had a detected level of gasoline at 19 µg/L. The results for gasoline in the associated project soil samples were previously changed to non-detect (U) due to method blank contamination or were greater than five times the blank amount.

2. Trip blank TB110107 had a detected level of gasoline at 16 µg/L. The results for gasoline in the associated project soil samples were previously changed to non-detect (U) due to method blank contamination or were five times the blank amount.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Soil method blank QC413624 had a detected level of diesel at a concentration of 0.4 mg/Kg. The results for diesel in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount. See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exception:

1. A percent recovery for diesel failed the 65-135% project acceptance criteria in QC samples 1065EX359[4.0] MSD at 61%. No qualification of data is necessary, because no action is taken solely in response to MS/MSD data outliers.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065EX360[4.0] and DUP110107, the relative percent difference (RPD) between the detected results failed the 50% acceptance criteria for motor oil at 157%. The absolute difference between results for diesel was greater than two times the reporting limit. The original result for diesel was 3.0 mg/kg and the duplicate result was 15 mg/kg. It should be noted that the original sample was analyzed undiluted and the duplicate sample was analyzed at a five times dilution due to the presence of heavier hydrocarbons.

The analysis of the field duplicate samples is a measure of both field and analytical precision. Since the effect on the quality of the data is unknown, data have not been qualified as a result of field duplicate failure.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but

quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/6020/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC413589 had detected levels of beryllium, chromium, copper, lead, molybdenum, and silver at 0.0026 mg/Kg, 0.025 mg/Kg, 0.056 mg/Kg, 0.077 mg/Kg, 0.026 mg/Kg, and 0.06 mg/Kg, respectively. The results for silver in the associated samples were less than five times the blank amount and changed to non-detect (U). The results for beryllium, chromium, copper, lead, and molybdenum in the associated samples were greater than five times the blank values or non-detect and qualification was not required. Table 1 of this report for a summary of qualifications due to blank contamination.

2. Solid method blank QC414273 had detected levels of lead, molybdenum, nickel, vanadium, and zinc at 0.0048 mg/Kg, 0.019 mg/Kg, 0.048 mg/Kg, 0.0075 mg/Kg, and 0.056 mg/Kg, respectively. The results for lead, molybdenum, nickel, vanadium and zinc in the associated sample were greater than five times the blank values and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, lead, mercury, and zinc failed the 75-125% project acceptance criteria in QC samples 1065EX359[4.0] MS/MSD at 63%/61%, passing/188%, passing/160%, 25%/-4%, and 570%/338%, respectively. The results for antimony and mercury in the associated project

sample were qualified as estimated with a low bias (J-) and the detected results for copper, lead, and zinc were qualified as estimated with a high bias (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

2. Percent recoveries for antimony, chromium, copper, molybdenum, nickel, vanadium, and zinc failed the 75-125% project acceptance criteria in QC samples 198975-001 MS/MSD at 28%/29%, passing/52%, passing/65%, 69%/71%, 225%/152%, passing/61%, 151%/passing. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required.

F. **Field QC Samples – Field Blanks**

QC criteria were met for the field QC blank associated with the project samples, with the following exceptions:

1. Equipment rinsate blank 1065EX360RB361 had detected levels of barium and nickel at 0.46 µg/L and 0.84 µg/L, respectively. The values were converted to solid matrix units and the project soil samples were evaluated for blank contamination. The results for barium and nickel in the associated soil samples were greater than five times the blank amounts and qualification was not required.

H. **Field QC Samples – Field Duplicates**

QC criteria were met for the field duplicate samples identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for metals in soil and water matrices met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – November 7, 2007 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 199042

SAMPLING DATE: 11/07/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX363[8.0]	199042-003	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX364[6.0]	199042-004	EPA 8260B, 8270C-SIM, 8015B, 6010B,

		7471A
1065EX365[6.5]	199042-005	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC414324 had detected levels of acetone and methylene chloride at 1.1 µg/Kg and 1.1 µg/Kg, respectively. The results for acetone and methylene chloride in the associated samples were less than ten times the blank amounts and changed to non-detect (U). See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in sample 1065EX365[6.5]. Samples were J-flagged to the MDL and MDLs meet required limits.
3. It should be noted that the reporting limits for some soils were raised due to limited sample size collected in the encore devices. This resulted in reporting limits above the CUL for Benzene in sample 1065EX363[8.0]. Samples were J-flagged to the MDL and MDLs meet required limits.
4. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)
Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision

of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported for the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section C.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC414467 had a detected level of gasoline at a concentration of 0.017 mg/Kg. The results for gasoline in the associated samples were greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. The percent recoveries for the surrogate bromofluorobenzene (BFB) failed the 65-135% project acceptance criteria in sample 1065EX365[6.5] at 153%. The

detected result for gasoline was qualified as estimated (J). See Table 1 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Soil method blank QC414316 had a detected level of diesel at 0.24 mg/kg. The result for diesel in sample 1065EX363[8.0] was less than five times the

blank amount and was changed to non-detect (U). See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
QC criteria were met for the field QC blank identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7470A/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC414260 had detected levels of barium, cadmium, chromium, cobalt, molybdenum, silver, vanadium, and zinc at 0.066 mg/Kg, 0.0052 mg/Kg, 0.029 mg/Kg, 0.013 mg/Kg, 0.034 mg/Kg, 0.057 mg/Kg, 0.024 mg/Kg, and 0.29 mg/Kg, respectively. The results for molybdenum and silver in the associated samples were changed to non-detect (U) if those values were less than five times the blank amounts. The results for barium, cadmium, chromium, cobalt, vanadium, and zinc were greater than five times the blank amounts or non-detect and qualification was not required. See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, and mercury failed the 75-125% project acceptance criteria in QC samples 1065EX363[8.0] MS/MSD at 38%/39%, 140%/passing, and 135%/passing, respectively. The results for antimony in the associated project sample were qualified as estimated with a low bias (J-) and the detected results for copper and mercury were qualified as estimated with a high bias (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – November 12, 2007 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 199163

SAMPLING DATE: 11/12/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX341[7.0]	199163-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
DUP111207	199163-002	EPA 8260B, 8270C-SIM, 8015B, 6010B,

		7471A
1065EX342[5.0]	199163-003	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX343[5.0]	199163-004	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX344[5.0]	199163-005	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A
1065EX345[5.0]	199163-006	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC414999 had detected levels of acetone and methylene chloride at 2.2 µg/Kg and 8.7 µg/Kg, respectively. The results for acetone and methylene chloride in the associated samples were less than ten times the blank amounts and changed to non-detect (U).

2. Soil method blank QC415071 had a detected level of methylene chloride at 3.0 µg/Kg. The result for methylene chloride in the associated sample was less than ten times the blank amount and changed to non-detect (U).

See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in samples 1065EX341[7.0], DUP111207, 1065EX342[5.0], 1065EX344[5.0], and 1065EX345[5.0]. Samples were J-flagged to the MDL and MDLs meet required limits.
3. It should be noted that the reporting limits for some soils were raised due to limited sample size collected in the encore devices. This resulted in reporting limits above the CUL for Benzene in sample 1065EX343[5.0]. Samples were J-flagged to the MDL and MDLs meet required limits.
4. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)
Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported for the preliminary results.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC415162 had a detected level of gasoline at a concentration of 0.017 mg/Kg. The results for gasoline in the associated samples was changed to non-detect (U) if those values were less than five times the blank amount.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for gasoline failed the 65-135% project acceptance criteria in QC samples 1065EX343[5.0] MS/MSD at 63%/58%. No qualification of data is necessary, because no action is taken solely in response to MS/MSD data outliers.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blank samples were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC415263 had detected levels of barium, chromium, copper, selenium, silver, and zinc at 0.010 mg/Kg, 0.019 mg/Kg, 0.038 mg/Kg, 0.088 mg/Kg, 0.030 mg/Kg, and 0.29 mg/Kg, respectively. The results for silver in the associated samples were changed to non-detect (U) if those values were less than five times the blank amounts. The results for barium, chromium, copper, selenium, and were greater than five times the blank amounts or non-detect and qualification was not required. See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, barium, copper, lead, and zinc failed the 75-125% project acceptance criteria in QC samples 1065EX343[5.0] MS/MSD at 50%/50%, (passing)/143%, (passing)/309%, 220%/601%, and 179%/595%, respectively. The results for antimony in the associated project sample were qualified as estimated with a low bias (J-) and the detected results for barium, copper, lead, and zinc were qualified as estimated with a high bias (J+). See

2. Relative percent differerences (RPDs) for copper, lead, and zinc failed the 30% project acceptance criteria in QC samples 1065EX343[5.0] MS/MSD at 33%, 80%, and 55%. The results for copper, lead, and zinc were qualified as estimated (J) in the associated samples.

Table 1 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – November 14, 2007 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 199248

SAMPLING DATE: 11/14/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX366[4.0]	199248-001	HOLD
1065EX367[4.0]	199248-002	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC415310 had a detected level of methylene chloride at 0.6 µg/Kg. The result for methylene chloride in the associated sample was less than ten times the blank amount and changed to non-detect (U).

See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported for the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Soil method blank QC415465 had a detected level of gasoline at 0.022 mg/Kg. The result for gasoline in the associated sample was less than five times the blank amount and changed to non-detect (U).

See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blank samples were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC415800 had detected levels of beryllium, nickel, and selenium at 0.0057 mg/Kg, 0.037 mg/Kg, and 0.062 mg/Kg, respectively. The results for beryllium, nickel, and selenium in the associated sample were greater than five times the blank amounts and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, barium, cadmium, chromium, cobalt, copper, nickel, selenium, and thallium failed the 75-125% project acceptance criteria in

QC samples 1065EX367[4.0] MS/MSD at 38%/40%, 55%/71%, 73%/(passing), 71%/(passing), 46%/57%, (passing)/9%, 68%/(passing), 71%/(passing), and 67%/69%, respectively. The results for antimony, barium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, and thallium in the associated project sample were qualified as estimated with a low bias (J- / UJ). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – November 21, 2007 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 199433

SAMPLING DATE: 11/21/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX346[5.0]	199433-001	EPA 8270C-SIM, 8015B
1065EX347[5.0]	199433-002	EPA 8270C-SIM, 8015B
1065EX348[5.0]	199433-003	EPA 8270C-SIM, 8015B

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis matrix spike and matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported with the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported with the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blank samples were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

No data qualifications were required for the project samples for any test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 200073

SAMPLING DATE: 12/19/07

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065SD100[5.5]	200073-001	EPA 8260B, 8270C-SIM, 8015B, 6010B, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC420977 had detected levels of chloromethane, bromomethane, acetone, methylene chloride, 1,3-dichlorobenzene, 1,4-dichlorobenzene, n-butylbenzene, 1,2-dichlorobenzene, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene at concentrations of 0.48 µg/Kg, 1.1 µg/Kg, 1.7 µg/Kg, 0.81 µg/Kg, 0.30 µg/Kg, 0.40 µg/Kg, 0.66 µg/Kg, 0.26 µg/Kg, 0.75 µg/Kg, 0.73 µg/Kg, 1.2 µg/Kg, and 0.75 µg/Kg, respectively. The result for n-butylbenzene in the associated sample was less than five times the blank amount and changed to non-detect (U). The results for chloromethane, bromomethane, acetone, methylene chloride, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene were either non-detect or greater than five times the blank amount and qualification was not required.

See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. Sample 1065SD100[5.5] was analyzed at a 1000x dilution due to the presence of petroleum hydrocarbons. The laboratory reporting limits did not meet the cleanup levels.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)
Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported for the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for PAHs soil matrix met the project-required reporting limits, with the following exceptions:

1. Sample 1065SD100[5.5] was analyzed at a 100x dilution due to the presence of petroleum hydrocarbons. The laboratory reporting limits did not meet the cleanup levels specified for the project samples.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
3. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reason noted in Section C.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Soil method blank QC421089 had a detected level of gasoline at 0.017 mg/Kg. The result for gasoline in the associated sample was greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. A recovery outside the 65-135% project-specific acceptance criteria was observed for bromofluorobenzene (BFB) in sample 1065SD100[5.5] at 267%. The detected result for gasoline in sample 1065SD100[5.5] was qualified as estimated (J).

See Table 1 of this report for a summary of qualifications due to surrogate recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exception:

1. A percent recovery for gasoline the 65-135% project acceptance criteria in QC samples 1065SD100[5.5] MS/MSD at (passing)/130%. No action is taken due to MS/MSD outliers alone.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples which required dilutions of five-fold or greater and had failing surrogate recoveries did not required qualification and were not noted in this report.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
Matrix spike and matrix spike duplicate samples were not reported with the preliminary results.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blank samples were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Section E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC421489 had detected levels of arsenic, chromium, nickel, and thallium at 0.050 mg/Kg, 0.052 mg/Kg, 0.050 mg/Kg, and 0.084 mg/Kg, respectively. The results for arsenic, chromium, nickel, and thallium in the associated sample were greater than five times the blank amounts and qualification was not required.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, cadmium, nickel, silver, and vanadium failed the 75-125% project acceptance criteria in QC samples 1065SD100[5.5] MS/MSD at 42%/43%, 21%/35%, 20%/49%, 71%/59%, and 268%/(passing), respectively. The results for antimony, cadmium, nickel, and silver in the associated project sample were qualified as estimated with a low bias (J-). The result for vanadium in the associated sample was qualified as estimated with a high bias (J+).

2. A relative percent difference (RPD) for vanadium failed the 35% project acceptance criteria in QC samples QC samples 1065SD100[5.5] MS/MSD at 55%. The result for vanadium in the associated sample was qualified as estimated (J).

See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **Field QC Samples – Field Blanks**

Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**

Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – January 11, 2008 Backfill Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 200520

SAMPLING DATE: 1/11/08

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065BC402	200520-005	EPA 8021, 8081A, 8141A, 8151A, 8015B, 6010B, 7471A
1065BC403	200520-006	ON-HOLD

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS by GC (8021B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC424095 had detected levels of toluene and m,p-xylenes at 0.65 µg/Kg and 0.83 µg/Kg, respectively. The results for toluene and m,p-xylenes in the associated sample were less than five times the blank amounts and changed to non-detect (U). See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples and laboratory control sample duplicates associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in a reporting limit above the CUL for Benzene in sample 1065BC402. Samples were J-flagged to the MDL and MDLs meet required limits.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**

Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**

Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

PESTICIDES (8081A)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. A percent recovery for endrin failed the 65-135% project acceptance criteria in QC samples 200522-001 MS/MSD at 52%/passing. In addition, a relative percent difference (RPD) for endrin failed the 35% project acceptance criteria in the same MS/MSD pair at 36%. The parent sample was not associated with the project sample.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for pesticides in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

ORGANOPHOSPHORUS PESTICIDES (OPP) (8141A)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control sample and laboratory control sample duplicate associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and/or matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for OPPs in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits did not meet the project-required reporting limits listed in Table 2-6.6-1 of the QAPP for all target compounds. The laboratory reported 0.5 mg/Kg for all compounds except Naled which had a reporting limit of 4.0 mg/Kg. The project-required reporting limits were 0.05 mg/Kg for all target compounds.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

CHLORINATED HERBICIDES (8151A)

Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control sample and laboratory control sample duplicates associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and/or matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:
1. Relative percent differences (RPD) for 2,4-D and 2,4,5-T failed the 30% laboratory acceptance criteria in QC samples 08-01-1021-3 MS/MSD at 37% and 35%, respectively. The parent sample was not associated with the project sample.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**
The laboratory reporting limits for chlorinated herbicides in soil matrix met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits did not meet the project-required reporting limits listed in Table 2-6.7-1 of the QAPP for several compounds. The laboratory reported 0.1 mg/Kg, 0.05 mg/Kg, 0.25 mg/Kg, 10 mg/Kg, 10 mg/Kg, and 0.1 mg/Kg for 2,4-D, dinoseb, dalapon, MCPP, MCPA, and dichlorprop, respectively. The project-required reporting limits were 0.025 mg/Kg, 0.025 mg/Kg, 0.1 mg/Kg, 5 mg/Kg, 5 mg/Kg, and 0.025 mg/Kg for 2,4-D, dinoseb, dalapon, MCPP, MCPA, and dichlorprop, respectively.
2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

METALS (6010B/7471A)
Overall, the data are usable as reported. Qualifications were required for the reasons in Section B and E.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC424107 had detected levels of antimony, beryllium, chromium, and nickel at 0.12 mg/Kg, 0.011 mg/Kg, 0.036 mg/Kg, and 0.027 mg/Kg, respectively. The result for beryllium in the associated sample was less than five times the blank amount and changed to non-detect (U). The results for antimony, chromium, and nickel were greater than five times the blank amounts and qualification was not required. See Table 1 of this report for a summary of qualifications due to blank contamination.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision

of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony and copper the 75-125% project acceptance criteria in QC samples 1065BC402 MS/MSD at 36%/45% and 365%/passing, respectively. In addition, the RPD for copper failed the 30% project acceptance criteria in the same MS/MSD pair at 46%. The result for antimony in the associated project sample was qualified as estimated with a low bias (J-) and the detected result for copper was qualified as estimated with a high bias (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

SUBJECT: Summary of Level II Data Validation – January 22, 2008 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

CURSORY DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 200684

SAMPLING DATE: 1/22/08

Level II cursory validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, and field QC Samples. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX301[8.5]	200684-001	EPA 8260B, 8015B, 6010B
1065EX302[8.5]	200684-002	EPA 8260B, 8015B, 6010B

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

BENZENE, TOLUENE, ETHYLBENZENE AND XYLENES by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for volatile organic compounds in soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in samples 1065EX301[8.5] and 1065EX302[8.5]. Samples were J-flagged to the MDL and MDLs meet required limits.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualification was required for the reasons noted in Section C.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples

C. **Surrogate Recoveries**

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. Percent recoveries for the surrogates trifluorotoluene and bromofluorobenzene failed the 65-135% project acceptance criteria in sample 1065EX301[8.5] at 166% and 202%, respectively. The detected result for gasoline was qualified as estimated (J).

See Table 1 of this report for a summary of qualifications due to surrogate percent recovery failures.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**

QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**

Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**

QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for gasoline failed the 65-135% project QC criteria in QC samples 1065EX301[8.5] MS/MSD at -198%/-199%. No action is taken solely due to matrix spike recovery failures.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Field QC Samples – Field Blanks**
Field QC blanks were not identified within this sample delivery group.

I. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

ARSENIC AND LEAD (6010B)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections E and F.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of matrix spike and matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for lead failed the 75-125% project acceptance criteria in QC samples 1065EX301[8.5] MS/MSD at (passing)/254%. In addition, the relative percent difference (RPD) for lead failed the 30% project acceptance criteria in the same QC samples at 94%. The detected results for lead were qualified in the associated samples as estimated (J+). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

G. **Field QC Samples – Field Duplicates**
Field duplicate samples were not identified within this sample delivery group.

H. **Reporting Limits**

The laboratory reporting limits for metals in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level II data validation, results are considered valid and usable for project purposes.

Level IV Data Validation Report

MACTEC

DATE: April 24, 2008
TO: Mary Jo Heassler, Senior Geologist
FROM: Kristen Carlyon, Senior Environmental Scientist
SUBJECT: Summary of Level IV Data Validation – March 19, 2008 Confirmation Soil Sampling, Building 1065, Presidio of San Francisco, California
PROJECT#: 4084075115

DATA REVIEW SUMMARY REPORT FOR PRESIDIO BUILDING 1065

CURTIS & TOMPKINS REPORT NO. 202043

SAMPLING DATE: 03/19/08

Level IV validation of the submitted data package was performed according to the following guidelines:

- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999, and
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004, and
- *Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan*, April, 2001.

The data were reviewed for holding times, blanks, surrogate recoveries, laboratory control samples/laboratory control spike duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD), laboratory duplicate samples, GC/MS tunes, system performance, ICP interference check standards, ICP serial dilutions, initial calibrations, initial and continuing calibration verification (ICV/CCV) standards, internal standards, field QC samples, and compound identification and quantitation. In addition, the sample results, target compound lists, and detection limits were reviewed to verify that project analytical requirements were met.

The following table presents the field sample identification (ID), the corresponding laboratory sample ID, and the test method requested for each sample according to the chain-of-custody records:

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX307[6.0]	202043-001	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A

Field Sample ID	Laboratory Sample ID	Requested Test Method
1065EX308[6.0]	202043-002	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX309[6.5]	202043-003	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX310[7.0]	202043-004	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX311[8.5]	202043-005	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
DUP031908	202043-006	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX312[6.0]	202043-007	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX313[4.5]	202043-008	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A
1065EX314[5.5]	202043-009	EPA 8260B, 8270C-SIM, 8015B, 6010, 7471A

GENERAL COMMENTS:

Documentation that sample custody was maintained was present on the chain-of-custody form.

The following paragraphs highlight the essential findings of the data validation effort:

VOLATILE ORGANIC COMPOUNDS (VOCs) by GC/MS (8260B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and I.

A. **Holding Times**

The technical holding time criteria was met for all project samples.

B. **Blanks**

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC433729 had detected levels of methylene chloride, naphthalene, and 1,2,3-trichlorobenzene at 0.78 µg/Kg, 2.0 µg/Kg, and 0.7 µg/Kg, respectively. The results for methylene chloride and naphthalene in the associated samples were changed to non-detect (U) since the values were less than ten times the blank amount for methylene chloride and five times the blank amount for naphthalene.

2. Soil method blank QC433939 had detected levels of methylene chloride, tert-butylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, para-isopropyl toluene, n-butylbenzene, and naphthalene at 7.0 µg/Kg, 0.72 µg/Kg, 0.58 µg/Kg, 0.66 µg/Kg, 0.69 µg/Kg, 0.55 µg/Kg, and 0.98 µg/Kg, respectively. The results for methylene chloride, 1,2,4-trimethylbenzene, sec-butylbenzene, para-isopropyl toluene, n-butylbenzene, and naphthalene in the associated samples were changed to non-detect (U) if those values were less than ten times the blank amount for methylene chloride and five times the blank amount for all other compounds. Qualification for tert-butylbenzene was not required due to non-detected results in the associated samples.

3. Although not detected in any of the method blanks, acetone has been commonly found as a contaminant in the laboratory. Acetone was detected in the dilutions of samples 1065EX309[6.5], 1065EX312[6.0], and 1065EX313[4.5]. It is the opinion of the reviewer that the acetone detected in these samples was introduced during the preparation and should be considered a laboratory artifact. As a result, the results for acetone in samples 1065EX309[6.5], 1065EX312[6.0], and 1065EX313[4.5] were changed to non-detect (U).

See Table 1 of this report for a summary of qualifications due to method blank and laboratory contamination.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **GC/MS Tunes**
QC criteria were met for all GC/MS tunes associated with the project samples.

H. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

I. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples, with the following exceptions:

1. The CCV standard analyzed 3/21/08 at 9:12 on instrument MSVOA04 had three compounds with percent differences (%Ds) exceeding the ±20% acceptance criteria: Freon 12 (-26%), methylene chloride (+24%), and hexachlorobutadiene (-28%). The results for Freon 12 and hexachlorobutadiene in the associated samples were qualified as estimated (UJ). The results for methylene chloride were previously changed to non-detect and further qualification was not required.

2. The CCV standard analyzed 3/20/08 at 9:00 on instrument MSVOA05 had two compounds with %Ds exceeding the ±20% acceptance criteria: bromomethane (+21%) and Freon 113 (-23%). The results for Freon 113 in the associated samples were qualified as estimated (UJ). The results for bromomethane were non-detect and qualification was not required.

See Table 1 of this report for a summary of qualifications due to CCV standard %D failures.

J. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

K. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

L. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

M. **Compound Identification and Quantitation**
All samples analyzed for volatile organic compounds in laboratory sample delivery group 202043 received full (Level IV) validation. This included the re-calculation of surrogate values, GC/MS tunes, initial and continuing calibrations, internal standards, and sample results. The results were re-calculated and verified as correctly reported by the laboratory.

N. **Reporting Limits**

The laboratory reporting limits for VOCs in soil matrix samples met the project-required reporting limits, with the following exceptions:

1. The laboratory reporting limits for vinyl chloride and 1,2-dichloroethane in soil matrix samples did not meet the cleanup levels of 6.7 µg/Kg and 5.0 µg/Kg, respectively. Samples were J-flagged to the method detection limits (MDLs) and MDLs meet required limits.
2. Samples 1065EX309[6.5] and 1065EX313[4.5] were analyzed at dilutions due to the presence of total petroleum hydrocarbons. The reporting limits were raised by the dilution factor and some sample results were non-detect at the raised reporting limits.
3. It should be noted that the reporting limits for all soils were raised due to dry weight correction. This resulted in reporting limits above the CUL for Benzene in samples 1065EX308[6.0], 1065EX311[8.5], and DUP031908. Samples were J-flagged to the MDL and MDLs meet required limits.
4. It should be noted that results below the laboratory reporting limits but above the method detection limits (MDLs) are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHs) by GC/MS-SIM (8270C-SIM)

Overall, the data are usable as reported. Qualifications were not required.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exception:

1. A percent recovery for the surrogate nitrobenzene-d5 failed the 23-120% laboratory acceptance criteria in sample 1065EX313[4.5] at 226%. Qualification of semivolatile data associated with only one surrogate outlier is not required.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **GC/MS Tunes**
QC criteria were met for all GC/MS tunes associated with the project samples.

H. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

I. **Continuing Calibration**
Continuing calibration criteria were met for all CCV standards associated with the project samples.

J. **Internal Standards**
Internal standard areas and retention times met QC acceptance criteria for all project samples.

K. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group.

L. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

M. **Compound Identification and Quantitation**
All samples analyzed for PAHs in laboratory sample delivery group 202043 received full (Level IV) validation. This included the re-calculation of surrogate values, GC/MS tunes, initial and continuing calibrations, internal standards, and sample results. The results were re-calculated and verified as correctly reported by the laboratory.

N. **Reporting Limits**

The laboratory reporting limits for PAHs in soil matrix met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. Sample 1065EX311[8.5] was analyzed at a dilution due to a dark, viscous extract matrix. The reporting limits were raised by the dilution factor and some sample results were non-detect at the raised reporting limits.
3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as GASOLINE (8015B)

Overall, the data are usable as reported. Qualifications were required for the reasons noted in Sections B and C.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Soil method blank QC433865 had a detected level of gasoline at 0.018 mg/Kg. The results for gasoline in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

2. Soil method blank QC434086 had a detected level of gasoline at 0.08 mg/Kg. The results for gasoline in the associated samples were greater than five times the blank amount and qualification was not required.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. A percent recovery for the surrogate bromofluorobenzene failed the 65-135% project-required acceptance criteria in sample 1065EX313[4.5] at 171%. The detected result was qualified as estimated (J).

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for gasoline failed the 65-135% project-required acceptance criteria in QC samples 201977-003 MS/MSD at 4%/299%. The relative percent difference for gasoline failed the less than 35% project-required acceptance criteria in the same samples. The parent sample was unrelated to the project site and qualification of the data was not required.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group with the following exception:

1. In field duplicates 1065EX311[8.5] and DUP031908, the absolute difference between the results was greater than two times the reporting limit for gasoline. The original result for gasoline was 0.87 mg/Kg and the duplicate was 1.7 mg/Kg.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the field duplicate pairs listed above may be due to the sample matrix, sampling or laboratory technique, or method defects. Since

the effect of the quality of the data is not known, data is not qualified for field duplicate failure.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Compound Identification and Quantitation**
All samples analyzed for TPH-gasoline in laboratory sample delivery group 202043 received full (Level IV) validation. This included the re-calculation of surrogate values, initial and continuing calibrations, and sample results. The results were re-calculated and verified as correctly reported by the laboratory.

L. **Reporting Limits**

The laboratory reporting limits for gasoline in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. Samples 1065EX309[6.5] and 1065EX313[4.5] were analyzed at dilutions due to the presence of total petroleum hydrocarbons. The reporting limits were raised by the dilution factors.
3. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

TOTAL PETROLEUM HYDROCARBONS as DIESEL and MOTOR OIL (8015B)
Overall, the data are usable as reported. Qualification was required for the reason noted in Section B.

A. **Holding Times**
The technical holding time criteria was met for all project samples.

B. **Blanks**
Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exception:

1. Soil method blank QC433676 had a detected level of motor oil at 0.83 mg/Kg. The results for motor oil in the associated samples were changed to non-detect (U) if those values were less than five times the blank amount.

C. **Surrogate Recoveries**
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

E. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

F. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples.

G. **Initial Calibration**
Initial calibration criteria were met for all calibrations associated with the project samples.

H. **Initial and Continuing Calibration Verifications**
Calibration verification criteria were met for all ICV/CCV standards associated with the project samples.

I. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group with the following exception:

1. In field duplicates 1065EX311[8.5] and DUP031908, the absolute differences between the results for diesel and motor oil were greater than two times the reporting limits. The original result for diesel was 11 mg/Kg and the duplicate was 0.47 mg/Kg. The original result for motor oil was 73 mg/Kg and the duplicate was changed to non-detect at 2.9 mg/Kg due to method blank contamination.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the field duplicate pairs listed above may be due to the sample matrix, sampling or laboratory technique, or method defects. Since the effect of the quality of the data is not known, data is not qualified for field duplicate failure.

J. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with this sample delivery group.

K. **Compound Identification and Quantitation**
All samples analyzed for TPH-diesel and TPH-fuel oil/motor oil in laboratory sample delivery group 202043 received full (Level IV) validation. This included the re-calculation of surrogate values, initial and continuing calibrations, and sample results. The results were re-calculated and verified as correctly reported by the laboratory.

L. **Reporting Limits**

The laboratory reporting limits for diesel and fuel oil/motor oil in soil matrix met the project-required reporting limits.

1. It should be noted that the reporting limit for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the MDLs are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

METALS (6010B/7471A)

Overall, the data are usable as reported. Qualifications were required for the reasons in Sections B, E, and G.

A. Holding Times

The technical holding time criteria was met for all project samples.

B. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples, with the following exceptions:

1. Solid method blank QC43383 had a detected level zinc at 0.20 mg/kg. The results for zinc in the associated samples were greater than five times the blank amounts, and qualification was not required.

2. The 3/21/08 at 00:39 continuing calibration blank (CCB) analyzed on instrument MET09 had a detected level of cadmium at 0.343 µg/L. The values were converted to solid matrix units, and the project samples were evaluated for blank contamination. The results for cadmium in the associated sample were changed to non-detect (U) if those values were less than five times the CCB amount.

3. The 3/21/08 at 02:36 CCB analyzed on instrument MET09 had detected levels of several elements. The values were converted to solid matrix units, and the project samples were evaluated for blank contamination. The results for antimony and cadmium in the associated sample were changed to non-detect (U) since those values were less than five times the CCB amounts.

4. The 3/21/08 at 03:19 CCB analyzed on instrument MET09 had detected levels of several elements. The values were converted to solid matrix units, and the project samples were evaluated for blank contamination. The levels of all detected elements in the associated samples were either non-detected or greater than five times the blank amounts and qualification was not required.

See Table 1 of this report for a summary of qualifications due to method and calibration blank contamination.

C. **Laboratory Control Samples/ Laboratory Control Sample Duplicates**
QC criteria were met for the laboratory control samples associated with the project samples.

D. **Laboratory Duplicate Samples**
Laboratory duplicate samples were not analyzed with the project samples. Precision of the analytical method was demonstrated in the analysis of laboratory control spike/laboratory control spike duplicate and matrix spike/matrix spike duplicate samples.

E. **Matrix Spike / Matrix Spike Duplicate**
QC criteria were met for the matrix spike and matrix spike duplicate samples associated with the project samples, with the following exceptions:

1. Percent recoveries for antimony, copper, and zinc failed the 75-125% project QC criteria in QC samples 1065EX307[6.0] MS/MSD at 46/32%, -6/413%, and -60/268%, respectively. In addition, the relative percent differences (RPDs) for antimony, barium, copper, and zinc exceeded the 30% project-specific acceptance criteria at 36%, 164%, 116%, and 91%, respectively. Post-digest spike recoveries met the method-specific acceptance criteria of 75-125% with the exception of antimony. The results for antimony in the associated project samples were qualified as estimated (J-/UJ). The results for copper and zinc were qualified as estimated (J+). The results for antimony, barium, copper, and zinc were qualified as estimated (J/UJ). See Table 1 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

F. **ICP Interference Check Standards**
All QC criteria were met for the ICP interference check standards associated with the project samples, with the following exceptions:

1. A detected result was observed for antimony in interference check sample A (ICSA). Similar levels of antimony were observed in the associated samples. In addition, similar concentrations of the interferent iron, were observed in the the associated samples. As a result, the results for antimony in samples 1065EX307[6.0] and 1065EX309[6.5] were qualified as estimated with a high bias (J+).

G. **ICP Serial Dilution**
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. A percent difference for lead failed the less than 10% method-specific QC criteria in the serial dilution of sample 1065EX307[6.0] at 11%. The results for lead were qualified as estimated (J/UJ) in the associated samples. See Table 1 of this report for a summary of qualifications due to serial dilution outliers.

H. **Initial and Continuing Calibrations**
All initial and continuing calibrations standards associated with the project samples met QC acceptance criteria.

I. **Field QC Samples – Field Blanks**
Field QC blanks were not associated with the project samples.

J. **Field QC Samples – Field Duplicates**
QC criteria were met for the field duplicate samples identified within this sample delivery group, with the following exceptions:

1. In field duplicates 1065EX311[8.5] and DUP031908, the RPDs between the results for lead and zinc were greater than the 50% acceptance criteria at 188% and 147%, respectively. In addition, the absolute difference between results for arsenic was greater than two times the reporting limit. The original result for arsenic was 2.1 mg/Kg and the duplicate was 0.76 mg/Kg.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the field duplicate pairs listed above may be due to the sample matrix, sampling or laboratory technique, or method defects. Since the effect of the quality of the data is not known, data is not qualified for field duplicate failure.

K. **Compound Identification and Quantitation**
All samples analyzed for metals in laboratory sample delivery group 202043 received full (Level IV) validation. This included the re-calculation of initial and continuing calibrations and sample results. The results were re-calculated and verified as correctly reported by the laboratory.

L. **Reporting Limits**

The laboratory reporting limits for metals in water and soil matrices met the project-required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. It should be noted that results below the laboratory reporting limits but above the method detection limits are considered to be qualitatively acceptable, but quantitatively unreliable, due to the uncertainty in analytical precision near the limit of detection. All results below the laboratory reporting limits are considered estimated values and flagged "J" by the laboratory.

SUMMARY

The attached Table 1 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

Quality control criteria were met and the data were considered acceptable. Based upon the Level IV data validation, results are considered valid and usable for project purposes.

Subject: Monitoring Well Destruction, Installation, and Development
Building 1065 Area
The Presidio of San Francisco, San Francisco, California

Dear Mr. Seelbach:

Treadwell & Rollo, Inc. (Treadwell and Rollo) is pleased to submit this report documenting the destruction of monitoring wells 1065PZ1A, 1065PZ1B, 1065MW9A, and 1065MW9B and the installation of replacement well 1065MW103A for the Building 1065 Area (Site) at the Presidio of San Francisco (Presidio) (Figure 1). Monitoring wells 1065PZ1A and 1065PZ1B were located in the triangular-shaped parking lot in north of Building 1063 on Gorgas Avenue in the Presidio. Monitoring wells 1065MW9A and 1065MW9B were located in a roadway south of Building 1063 (Figure 1). It is our understanding that the monitoring wells were located within the boundaries of a remedial excavation that is scheduled by the Presidio Trust (Trust) to take place in the near future. A replacement well (1065MW103A) was installed approximately 20 feet northeast of the former location of monitoring well 1065PZ1B, outside of the excavation boundaries. The well destruction and installation were conducted as part of the Second Quarter 2007 Presidio-wide Groundwater Monitoring activities and prior to the Second Quarter 2007 groundwater monitoring event. A brief description of the monitoring well destruction, installation, and development activities performed at the Site is included below.

Monitoring Well Destruction

On 30 May 2007, prior to the destruction of well, the surface concrete seal at wells 1065PZ1A, 1065PZ1B, 1065MW9A, and 1065MW9B was broken out to remove the well box and expose the top of the well casing. All wells were in good condition prior to the destruction activities.

Monitoring wells 1065PZ1A, 1065PZ1B, 1065MW9A, and 1065MW9B were destroyed by over-drilling. The wells were over-drilled using a track-mounted drill rig equipped with 8-inch-diameter hollow-stem augers to total depths of 9, 22, 16, and 32 feet below ground surface (bgs), respectively. The well casings were removed intact after the annular seal had been removed by the augers. The resulting soil boring was filled to ground surface with a neat cement slurry grout by tremie method from the bottom of the boring to the ground surface. All well destruction activities were performed by Gregg Drilling and Testing of Martinez, California, under the observation of a Treadwell and Rollo field geologist. The monitoring well materials and soil cuttings associated with the abandonment were contained in 55-gallon drums and were stored onsite in Building 1063, as requested by the Trust. Well abandonment records are included as Attachment A. Well completion reports for the abandonment of monitoring wells 1065PZ1A, 1065PZ1B, 1065MW9A, and 1065MW9B were submitted to the State of California's Department of Water Resources on 14 June 2007 (Attachment B).

Monitoring Well Installation

Before drilling activities began, an excavation permit was obtained by the Trust and Underground Services Alert (USA) was notified. Prior to drilling, a pilot hole was advanced to 5 feet bgs using a hand auger to ensure that no underground utilities were present at the boring location.

On 30 May 2007, Treadwell & Rollo observed the installation of one monitoring well (1065MW103A) using a track-mounted drill rig equipped with 8-inch-diameter hollow-stem augers. In order to install the monitoring well, the soil boring was advanced below the water table to total depth of 9.0 feet bgs at the request of the Trust. The materials encountered in the boring were logged according to the Unified Soil Classification System by a Treadwell & Rollo field geologist under the review of a California-registered geologist. All drilling activities were performed by Gregg Drilling and Testing, Inc. The boring log and well construction diagram for 1065MW103A are included in Attachment C.

During drilling, soil samples were continuously collected for lithologic description purposes. Soil samples were collected using a 1.5-foot-long split-spoon sampler lined with three 2-inch diameter by 6-inch-long stainless steel sample tubes. The sampler was driven 18 inches ahead of the augers at each sample point. No soil samples were retained for chemical analyses.

An organic vapor meter (photoionization detector [PID]) was used to field-screen the soil samples for volatile organic compounds (VOCs). No organic vapors were detected.

The monitoring well was constructed of 2-inch-diameter Schedule 40 PVC casing with flush threads and 0.010-inch-slot well screen. The well screen for well 1065MW103A was installed from approximately 4 feet to 9 feet bgs. Blank well casing was installed from the top of the screened casing to the ground surface. A sand filter pack (No. 2/12 sand) was installed in the borehole annulus from the bottom to approximately 1 foot above the screened casing. A 2-foot-thick seal of hydrated bentonite pellets was placed above the sand filter pack. The remainder of the borehole annulus was sealed with a neat cement grout. A locking water-tight well cap was placed on the well casing, and a traffic-rated manhole vault was installed to protect the wellhead and to prevent water from entering the well box. Well construction details are shown on the boring log (Attachment C). Well completion reports for the installation of monitoring well 1065MW103A were submitted to the State of California's Department of Water Resources on 14 June 2007 (Attachment B).

Monitoring Well Development

On 1 June 2007, monitoring well 1065MW103A was developed by Blaine Tech Services of San Jose, California (Blaine Tech) using surge and pumping methods, in accordance with the Presidio Trust's *Monitoring Well Development Standard Operating Procedure*. After surging the well with a 2-inch surge block for approximately 15 minutes, the well was purged using a positive air displacement (PAD) pump. Water quality measurements including temperature, pH, conductivity, and turbidity were recorded at each casing volume removed. The well was dewatered after approximately 3 casing volumes. After dewatering, the pump was removed and the well was allowed to recharge. After approximately 30 minutes, the well was surged again for 10 minutes, and pumping and water quality measurements resumed. Development was completed after the well was surged and dewatered three times, approximately 12 casing volumes had been removed, and water quality parameters had reached stability. The resulting well development water was transported to Central Magazine by Blaine Tech and temporarily stored in one of the 2800-gallon water tanks pending analytical testing and discharge. Monitoring well development field data is presented in Attachment D.

On 12 June 2007, Chaudhary Inc., a California-licensed land surveyor, surveyed the location and elevation of the top of the casing for the newly installed monitoring well. The survey coordinates and top of casing elevation will be added to the quarterly groundwater monitoring well network database and will be presented in the next quarterly monitoring report.

If you have any questions after reviewing this report, please call Joshua Graber at (415) 955-9040.

Sincerely yours,
TREADWELL & ROLLO, INC.

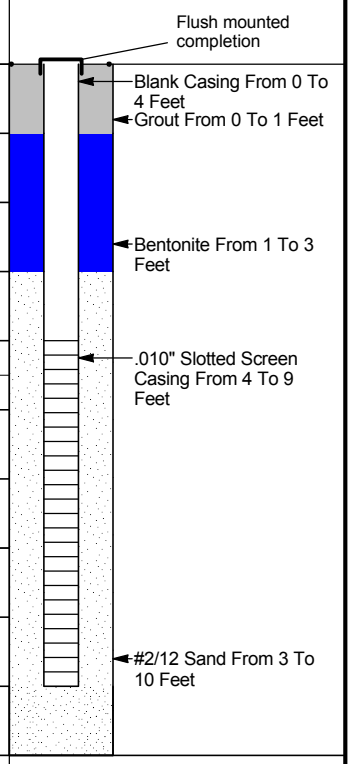
WELL COMPLETION INFORMATION



Boring terminated at a depth of 10 feet below ground surface.
Monitoring Well constructed in boring.
Groundwater encountered at a depth of 7 feet during drilling.

Treadwell&Rollo

Project No.:	Figure:
2893.65	C-1

LONG-LOG NAME-ENVIRO WELL LOG 289365.GPJ T&R.GDT 6/15/07

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	**Gravels** (More than half of coarse fraction > no. 4 sieve size)	**GW**	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	**SW**	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	**Silts and Clays** LL = < 50	**ML**	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	**MH**	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		**PT**	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	**Grain Size in Millimeters**
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel	3" to No. 4	76.2 to 4.76
coarse	3" to 3/4"	76.2 to 19.1
fine	3/4" to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.074
coarse	No. 4 to No. 10	4.76 to 2.00
medium	No. 10 to No. 40	2.00 to 0.420
fine	No. 40 to No. 200	0.420 to 0.074
Silt and Clay	Below No. 200	Below 0.074

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

Core sample

Analytical laboratory sample

Sample taken with Direct Push sampler

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

BLDG 1063, GORGAS AVE

Notes
1 - Piezometer 1065PZ4B was mistakenly sampled instead of the 1065PZ4A during the Second Quarter 2008.
mg/L - milligrams per liter
NM - Not measured
NR - Not reported
Table 11 in the main report identifies current and historical
data qualifiers.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.
mg/L - milligrams per liter
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historical data qualifiers.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.

2 - Cleanup levels taken from Table 6 of the Building 1065 Area CAP (MACTEC, 2007d). The MTBE cleanup level listed is equal to the California Maximum Contaminant Level (EKI, 2002). Total xylenes and TPHg have two different cleanup levels dependent on if the location is inside or outside of the Ecological Buffer Zone. In both cases, the higher cleanup level applies to wells outside of the Ecological Buffer Zone (e.g. the total xylenes cleanup level for wells outside of the Ecological Buffer Zone is 1,750 µg/L, whereas the cleanup level for wells inside the Ecological Buffer Zone is 318 µg/L). Piezometers 1065PZ7A, 1065PZ7B, 1065PZ4A, and 1065PZ4B are the only Building 1065 monitoring locations located inside the Ecological Buffer Zone.

3 - TPH analysis was not run using the silica gel cleanup method 3630A, although it was marked on the chain of custody.
4 - Piezometers 1065PZ4A, 1065PZ4B, 1065PZ7A, and 1065PZ7B are located within the Ecological Buffer Zone and therefore, the lower cleanup level applies per the CAP.
-- Cleanup level not established
Bold numbers indicate concentrations that exceed cleanup levels.
µg/L - micrograms per liter
NA - Not analyzed
ND - Not detected
TPH - Total petroleum hydrocarbons
BTEX - Benzene, toluene, ethylbenzene, and total xylenes
MTBE - Methyl tert-butyl ether
H - Heavier hydrocarbons contributed to the quantitation.
L - Lighter hydrocarbons contributed to the quantitation.
Y - Sample exhibits a fuel pattern that does not resemble the standard.
Z - Sample exhibits unknown single peak or peaks.
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historical data qualifiers.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.
2 - From Table 6 of the CAP (MACTEC, 2007d).
3 - Piezometer 1065PZ4B was mistakenly sampled instead of the 1065PZ4A during the Second Quarter 2008.
µg/L - micrograms per liter
mg/L - milligrams per liter
NA - Not analyzed
-- Cleanup level not established
Bold concentrations indicate cleanup level exceedances.
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historic data qualifiers.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Fourth Quarter 2004.
mg/L - milligrams per liter
TOC - Total Organic Carbon
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historical data qualifiers.

Notes

1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001.

2 - The concentration of As V was determined by the laboratory by subtracting the As III concentration from the inorganic As concentration.

3 - Relative percentages of As III and As V were calculated by dividing the As III and As V concentrations by the As concentration and multiplying by 100.

4 - From Table 6 of the Building 1065 CAP (MACTEC, 2007)

µg/L - micrograms per liter

-- Cleanup level not established

Bold concentrations indicate cleanup level exceedances.

CL suffix denotes a quality control duplicate sample was sent to the control laboratory.

Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.

Table 11 in the main report identifies current and historical data qualifiers.

Notes
1 - All depth to water measurements are an average of three measurements recorded in the field.
2 - Piezometer / well abandoned on 30 May 2007.
3 - Value represents the bottom of casing elevation in feet PLLW.
4 - Groundwater level was at or above the top of casing. Value listed is top of casing elevation.
NM - Not measured
MW - Monitoring well
PZ - Piezometer
feet PLLW - feet above Presidio lower low water vertical datum

APPENDIX J3

MEMORANDUM - REVIEW OF GROUNDWATER MONITORING RESULTS, PRE-EXCAVATION MONITORING, BUILDING 1065 AREA, PRESIDIO OF SAN FRANCISCO, CALIFORNIA

MACTEC

DATE: September 25, 2007; Revised August 14, 2008
PREPARED BY: Mary Jo Heassler
REVIEWED BY: Warren Chamberlain
SUBJECT: Review of Groundwater Monitoring Results, Pre-Excavation Monitoring, Building 1065 Area, Presidio of San Francisco, California
PROJECT NUMBER: 4084075115 01.4

Memorandum
Review of Groundwater Monitoring Results
Pre-Excavation Monitoring Event - First and Second Quarter 2007
Building 1065 Area, Presidio of San Francisco

This memorandum presents a summary of groundwater monitoring data collected from piezometers and wells sampled during the First and Second Quarters of 2007 at the Building 1065 Area, Presidio of San Francisco, California (site). The wells and piezometers were sampled to monitor baseline groundwater conditions downgradient of soil and groundwater remedial units (RUs)-A at the site prior to implementing excavation of soil within RU-A as part of corrective actions identified in the *Corrective Action Implementation Work Plan, Building 1065 Area, Presidio of San Francisco, California* (IWP) (*MACTEC, 2007b*). In addition, this memorandum presents an assessment and comparison of chemical concentrations and field measurements between these most recent groundwater monitoring events, and historical groundwater monitoring data used to estimate the application rate of oxygen releasing product to excavations at RU-A. Oxygen releasing product will only be applied if residual hydrocarbons are present at concentrations above cleanup levels following completion of the corrective action soil excavation program.

Summary of Monitoring Parameter Assessment

Groundwater samples were collected in March 2007 from piezometers 1065PZ1A and 1065PZ1B and wells 1065MW101 and 1065MW102 as part of the Basewide Groundwater Monitoring Program, and in June 2007 from recently installed monitoring well 1065MW103A as part of the groundwater sampling program prescribed in the *Corrective Action Plan, Building 1065 Area, Presidio of San Francisco, California* (CAP) and IWP (*MACTEC, 2007a* and *b*). Except for 1065PZ1B, the wells and piezometers downgradient of RU-A are screened in the first water-bearing zone. Piezometer 1065PZ1B was installed in the intermediate groundwater zone.

In the First Quarter 2007, groundwater samples were analyzed for total petroleum hydrocarbons (TPH) as diesel (d), TPH as gasoline (g), TPH as fuel oil (fo), volatile organic compounds (VOCs), aluminum, antimony, arsenic, cadmium, calcium, chromium, copper, iron, lead, magnesium, manganese, nickel, potassium, sodium, zinc, total dissolved solids (TDS), alkalinity, bicarbonate, chloride, fluoride, nitrate and nitrite as nitrogen (N), sulfate, and sulfide. In the Second Quarter 2007, groundwater samples from 1065MW103 were analyzed for TPHg, benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertbutyl ether (MTBE), aluminum, arsenic, iron, manganese, nickel, TDS, alkalinity, bicarbonate, chloride, fluoride, nitrate and nitrite as N, sulfate, sulfide. Tables A-11-1 through A-11-4, provided by Treadwell and Rollo, Inc., summarize historical groundwater monitoring data for the site. It is noted that in June 2007, Piezometers 1065PZ1A and 1065PZ1B were abandoned as they were located in the footprint of a planned RU-A excavation.

The following discussion includes an evaluation of groundwater chemicals of concern (COCs) identified in the CAP specifically, TPHg, benzene, and arsenic. In addition, dissolved oxygen, ORP, manganese, and iron are

discussed as these parameters provide an indication of the groundwater reducing/oxidizing (redox) conditions. The redox condition of groundwater will affect the solubility of the arsenic and the ability of aerobic microbes to degrade petroleum hydrocarbons, whose presence may create localized reducing conditions in groundwater.

Comparison to Historical Monitoring Results

Comparison of historical analytical results for groundwater chemicals of concern (COCs) TPHg, benzene, and arsenic, to the most recent round of sampling from the monitored wells and piezometers (1065PZ1A, 1065PZ1B, 1065MW101, and 1065MW102 and recently installed monitoring well 1065MW103A) indicate the following:

- **TPHg** - Historical concentrations of TPHg have ranged from nondetect to 310 µg/L in groundwater samples collected from 1065PZ1A. TPHg has not been detected in samples collected from 1065MW101, 1065MW102, and 1065PZ1B and was not detected in samples collected from the recently installed well 1065MW103. Analytical results for First Quarter 2007 samples from 1065PZ1A (140 µg/L TPHg) show a decrease in the TPH concentrations from December 2006 (260 µg/L TPHg) but the detected value in March 2007 does not represent a historical low in 1065PZ1A (the historical low was in December 2004 when TPHg was not detected at a detection limit of 50 µg/L in 1065PZ1A).

- **Benzene** - Benzene has only been detected sporadically at estimated concentrations (below the reporting limit) in 1065PZ1A and 1065MW102. Benzene has not been detected in 1065MW101 and 1065PZ1B. The most recent sampling events show that benzene was detected at 0.07 µg/L (below the reporting limit) in 1065PZ1A and was not detected in the other wells and piezometers downgradient of RU-A.

- **Arsenic** - Review of historical data for 1065MW101, 1065MW102, and 1065PZ1A shows a decline in reported arsenic concentrations between August 2006 and March 2007. Arsenic concentrations detected in March 2007 in 1065PZ1A and 1065MW101 do not represent historical lows. The historically lowest detected concentration in 1065PZ1A (nondetect) and in 1065MW101 (21 µg/L) were reported in December 2004. Arsenic was not detected in 1065MW102 in March 2007 and also in November 2004; therefore, the March 2007 results are equivalent to the historic low. Arsenic was also not detected in the sample collected from newly installed monitoring well 1065MW103. Arsenic has not been detected in intermediate well 1065PZ1B.

Results for 1065MW103

Analytical results for newly installed monitoring well 1065MW103 shows that groundwater COCs were not detected in the sample collected in June 2007. In addition, groundwater monitoring parameters show higher concentrations of dissolved oxygen, manganese, and relatively lower concentrations of iron in Well 1065MW103 than were detected/measured in 1065PZ1A and 1065MW101. ORP values were positive for 1065MW103 and 1065MW102 and were negative for 1065PZ1A and 1065MW101. These monitoring parameters suggest that groundwater conditions in 1065MW103 may be more oxidizing than in 1065MW101 and 1065PZ1A. The slightly more oxidized state of groundwater at 1065MW103 and 1065MW102 relative to 1065PZ1A and 1065MW101 (as indicated by monitoring parameters) and nondetect results for TPHg and arsenic, suggest that these wells are located outside of the hydrocarbon plume. Studies performed by the Trust (*MACTEC, 2006*) have indicated that there are localized reducing conditions in groundwater, likely from the presence of petroleum hydrocarbons, that appear to control the increased solubility of arsenic in groundwater at the site.

Summary and Conclusions

In summary, First and Second Quarter 2007 groundwater monitoring data from wells and piezometers downgradient of RU-A show relatively lower chemical concentrations than have been detected in the last three quarters of groundwater monitoring. However, these detected concentrations do not represent historical lows. Analytical results for the newly installed well 1065MW103 show that groundwater COCs: TPHg, benzene, and arsenic were not detected. Accordingly, First and Second Quarter 2007 monitoring results do not suggest the need to re-evaluate the recommended rates for application of oxygen releasing compound estimated in the IWP

(*MACTEC, 2007b*) because concentrations of COCs are similar to those considered when developing recommendations for oxygen releasing product application rates in the IWP.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.
mg/L - milligrams per liter
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historical data qualifiers.

Cleanup Tables [2]		**1**	**150**	**300**	**1,750/318**	**13**	**--**	**--**	**--**	**770/443**	**--**	**--**

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.

2 - Cleanup levels taken from Table 6 of the Building 1065 Area CAP (MACTEC, 2005b). The MTBE cleanup level listed is equal to the California Maximum Contaminant Level (EKI, 2002). Total xylenes and TPHg have two different cleanup levels dependent on if the location is inside or outside of the Ecological Buffer Zone. In both cases, the higher cleanup level applies to wells outside of the Ecological Buffer Zone (e.g. the total xylenes cleanup level for wells outside of the Ecological Buffer Zone is 1,750 µg/L, whereas the cleanup level for wells inside the Ecological Buffer Zone is 318 µg/L). Piezometers 1065PZ7A, 1065PZ7B, 1065PZ4A, and 1065PZ4B are the only Building 1065 monitoring locations located inside the Ecological Buffer Zone.

3 - TPH analysis was not run using the silica gel cleanup method 3630A, although it was marked on the chain of custody.
4 - Piezometers 1065PZ4A, 1065PZ4B, 1065PZ7A, and 1065PZ7B are located within the Ecological Buffer Zone and therefore, the lower cleanup level applies per the CAP.
-- Cleanup level not established
Bold numbers indicate concentrations that exceed cleanup levels.
µg/L - micrograms per liter
NA - Not analyzed
ND - Not detected
TPH - Total petroleum hydrocarbons
BTEX - Benzene, toluene, ethylbenzene, and total xylenes
MTBE - Methyl tert-butyl ether
H - Heavier hydrocarbons contributed to the quantitation.
L - Lighter hydrocarbons contributed to the quantitation.
Y - Sample exhibits a fuel pattern that does not resemble the standard.
Z - Sample exhibits unknown single peak or peaks.
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historical data qualifiers.

Notes
1 - The identified analytical method(s) are for analyses performed beginning in the Second Quarter 2001. The analytical methods used during previous quarters are identified in the respective quarterly reports.
2 - From Table 6 of the CAP (MACTEC, 2005b).
µg/L - micrograms per liter
mg/L - milligrams per liter
NA - Not analyzed
-- Cleanup level not established
Bold concentrations indicate cleanup level exceedances.
CL suffix denotes a quality control duplicate sample was sent to the control laboratory.
Table 7 in the main report identifies all duplicate and split samples and the well from which they were collected.
Table 11 in the main report identifies current and historic data qualifiers.

OUTDOOR CAP INSPECTION FORM AND PHOTOGRAPHS

Surface Cover Inspection Form
LUC Zones 1, 2, and 3, Building 1065 Area
Presidio of San Francisco, California

Date: June 3, 2008 Completed by: Scott Graham

Weather: Overcast and cool

Inspection Checklist Item	Change since last inspection ? (Yes/No)	Comments
LUC Zone 1 - North of Building 1063		
Changes in concrete and asphalt pavement Have there been changes to concrete and asphalt pavement north of Building 1063? Describe changes, take photograph, and identify on site map.	N/A – 1st inspection	**Location:** West side of new asphalt patching north of Building 1063. **Description of LUC area:** Old asphalt cover with some cracks and minor weeds. **Photo ID** 542 and 543
LUC Zone 2 - Inside of and south of Building 1063		
Has the area inside of and west of Building 1063 changed since the last inspection; e.g., have any construction activities been performed, is the area secure? Describe changes, take photograph, and identify on site map.	N/A – 1st inspection	**Location:** Southern foundation of Building 1063 between concrete slab (on east) and westernmost sliding door. Area extends 1 foot south and 3 feet north (inside building) of foundation wall. Combination to get inside of building is 1063. **Description of LUC area:** Compacted AB (road base) to surface (approximately 1 inch below slab foundation elevation inside Bldg. 1063). **Photo ID** 544, 545, and 546
LUC Zone 3 - Building 1040 outdoor cap		
Status of monitoring point at Building 1040 Measure distance from the top of the established survey rod to the top of ground surface.	N/A – 1st inspection	**Point 1:** Survey rod is located approximately 3 feet from foundation wall and 2 feet north of the double doors. Measurement was 4.5 inches from the top of the ground surface to the top of the stake. Measurement was taken on the north side of the survey rod. **Photo ID** 570, 571, 572

Surface Cover Inspection Form
LUC Zones 1, 2, and 3, Building 1065 Area
Presidio of San Francisco, California

Inspection Checklist Item	Change since last inspection ? (Yes/No)	Comments
Changes in ground surface in unpaved areas Has the area west of Building 1040 changed since the last inspection; e.g., has soil eroded away or been removed? Describe changes, take photograph, and identify on site map.	N/A – 1st inspection	**Location:** Soft dirt and weeds west of the northwest corner of Building 1040. **Description of LUC Area:** Took measurements from 5 different locations. Measurement locations and measurements (in inches) are shown on the attached photographs. **Photo ID** 548, 550, 561 through 572
Changes in concrete and asphalt pavement Have there been changes to concrete and asphalt pavement north of Building 1040? Describe changes, take photograph, and identify on site map.	N/A – 1st inspection	**Location:** Concrete sidewalk area between Building 1040 and chain link fence, north of the northwest corner of Building 1040. **Description of LUC Area:** Concrete sidewalk, concrete drainage channel, and flat grass/weed area to chain link fence. **Photo ID** 549 and 560
Other changes in site status Under comments list any additional changes in site status including additional construction or re-vegetation activities. Take photograph	N/A – 1st inspection	**Location and description of change:** N/A – 1st inspection. **Photo ID** N/A

Attachments: Photographs and Site Map

LUC Zone 1 from the northwest (looking southeast). LUC zone is just west of the newly paved area and just north of Building 1063. Photograph # 542.

Close up of LUC Zone 1 from the northeast (looking southwest). Photograph # 543.

LUC Zone 2, looking west northwest, LUC zone is under the southern foundation of Building 1063 (located on the right of this photograph) from a few feet into the concrete slab (foreground) and extending west. Photograph # 544.

LUC Zone 2, inside the building looking west, southern wall of Building 1063 on left. Photograph # 545.

Building 1040 from the west (looking east). The main part of LUC Zone 3 is located in front of the double doors between the pop-out section of the building (with the lower roof line) and the chain link fence on the left of the photograph. Photograph # 494.

LUC Zone 3, looking east at the northwest corner of Building 1040 and the LUC area north of the building. Photograph # 549.

LUC Zone 3, looking west at 1st measurement point (just to the right of the green measuring tape), building corner is the northwest corner of Building 1040. Photograph # 567.

1st measurement point, 50.75 inches from point shown (top of flat section of foundation wall) to ground surface. Photograph # 566.

LUC Zone 3, looking southeast at 2nd measurement point (to the left of the pipe stubs near the top of the slope), closeup of measurement point is below. Photograph # 550.

2nd measurement point, 32 inches from ground surface to top of flat area of the foundation wall (where it slopes in). Photograph # 561.

1.0 INTRODUCTION

On behalf of the Presidio Trust ("Trust"), Erler & Kalinowski, Inc. ("EKI"), has prepared this *Vapor Intrusion Assessment and Field Sampling Report* documenting the implementation and results of the *Building 1040 Indoor Air and Cap Assessment Work Plan, Presidio of San Francisco, California*, dated 13 March 2008, ("Work Plan"; EKI, 2008). The Work Plan was prepared as an appendix to the *Corrective Action Implementation Work Plan, Building 1065 Area, Presidio of California*, dated 10 August 2007 and prepared by MACTEC (MACTEC, 2007a). The field sampling activities for the Work Plan were completed in April 2008. Building 1040 is located in the northeast corner of the Presidio, in the Letterman Complex Planning District within Area B of the Presidio, between Thornburg and Eddie Roads (see Figure 1). Building 1040 is within an area being addressed by the Trust in the Building 1065 Corrective Action Plan ("CAP") (MACTEC, 2007b).

The Trust plans to lease Building 1040 to commercial businesses, resulting in a need to evaluate the risk to future commercial building occupants from exposure to possible residual subsurface chemicals from former Army activities through the vapor intrusion exposure pathway. To address these concerns, the Work Plan included an assessment of the potential for vapor intrusion into indoor air within Building 1040, assessment of the indoor portion of the cap, and review of needs for potential improvements to the indoor portion of the cap.

The approach of the Work Plan was developed taking into account the California Environmental Protection Agency, Department of Toxic Substances Control ("DTSC") guidance entitled *Interim Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC, 2004), U.S. Environmental Protection Agency ("U.S. EPA") guidance entitled *OSWER Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance)* (U.S. EPA, 2002), and consultation with the Trust, the National Park Service ("NPS"), Regional Water Quality Control Board, San Francisco Bay Region ("Water Board"), and DTSC. The Work Plan incorporated site visits to Building 1040 with Trust representatives where potential sample locations were selected and marked. The Work Plan was provided to the NPS, Water Board, DTSC, and members of the Restoration Advisory Board ("RAB"). Collectively, these parties are referred to as the "stakeholders."

The Work Plan was approved by the Water Board in a letter, *Water Board Approval of the March 13, 2008 Addendum to the Final Corrective Action Plan, Building 1065 Area and Revised Building 1040 Indoor Air and Cap Assessment Work Plan, Presidio of San Francisco,* dated 27 March 2008 (Water Board, 2008). The scope of work was conducted in accordance with the Presidio-wide Quality Assurance Project Plan ("QAPP") (Tetra Tech, 2001).

2.0 BACKGROUND

Detailed site background and remedial approach for the Building 1065 Area is provided in the Building 1065 CAP (MACTEC, 2007b) and the Implementation Work Plan (MACTEC, 2007a). According to the Building 1065 CAP, Building 1040 was constructed in 1920 and formerly operated as a power house and steam plant. Two former aboveground storage tanks ("ASTs") (AST 1040.1 and 1040.2) provided fuel for the equipment. These tanks were refilled by the Army's fuel distribution system ("FDS"), a network of fuel supply lines at the Presidio. The tanks were located in the northwest corner of the building. The Army removed the tanks and the FDS pipelines in 1996. The building itself is considered a historic structure with contributive value to the National Historic Landmark and is therefore planned to be preserved.

The Building 1065 CAP identifies a limited area of petroleum hydrocarbon impacted soil in the northwestern corner of Building 1040 that is identified as Remedial Unit C ("RU-C"). Former AST 1040.2 (a 20,000 gallon tank) was removed from this area. Residual concentrations of total petroleum hydrocarbons ("TPH") as fuel oil and unknown diesel hydrocarbons exceed applicable cleanup levels in soil. The maximum detected concentration of TPH fuel oil in soil in RU-C was 290 mg/kg, above the cleanup level of 114 mg/kg, and the maximum detected concentration of unknown diesel hydrocarbons was 2,000 mg/kg, above the cleanup level of 115 mg/kg.

Benzene was detected slightly below the 0.005 mg/kg applicable cleanup level, and acetone was also detected at a maximum concentration of 0.1 mg/kg, below the cleanup level of 0.24 mg/kg. No other volatile organic compounds ("VOCs") were detected in the soil samples. Anthracene, benzo(a)pyrene, chrysene, fluoranthene, phenanthrene, and pyrene were detected in the soil samples. The maximum concentration of any detected polycyclic aromatic hydrocarbon ("PAH") was 0.096 mg/kg, and no detections exceeded applicable cleanup levels. No other PAHs were detected in the soil samples. No groundwater impact is noted in the RU-C Area.

The approved remedial action for the RU-C area is to maintain and monitor the existing cap to isolate impacted soil from potential receptors and impose a land use control.

Based on the approved remedial action for the RU-C area, EKI proposed perimeter soil gas sampling to identify potential chemicals in the subsurface at Building 1040 that could volatilize into indoor air.[1] The scope of this investigation also included inspecting the building slab for functionality as a cap and identifying potential improvements for cap integrity.

[1] The presence of large mechanical equipment and slab thickness up to 4 feet thick limit the ability to perform a sub-slab soil vapor investigation.

3.0 DATA QUALITY OBJECTIVES

The data quality objectives ("DQOs") from the Work Plan guided the collection of additional data to evaluate the potential for human health risks in indoor air from residual COCs in soil under Building 1040. DQOs prepared for the Work Plan illustrate the rationale and decision making process; the DQOs are presented in Appendix A.

The DQO table identifies the specific guidance levels with which the sample results would be compared to assess whether additional investigation was warranted. Specifically, data were compared to environmental screening levels ("ESLs") developed by the Water Board, and, if ESLs were exceeded, site-specific Risk-Based Target Concentrations ("RBTCs") for detected chemicals with specific exposure scenarios (populations, factors, and parameters) were to be developed. The results of these comparisons are intended to determine if additional risk calculations or sampling should be performed and to evaluate the need for monitoring or potential remedial actions.

4.0 SAMPLING ACTIVITIES

4.1 Sample Collection Procedures

4.2.1 Collection of Soil Gas Samples

On 18 April 2008, EKI collected soil gas samples from 6 locations outside Building 1040, as indicated on Figure 2 (sample locations 1040SG101 through 1040SG106). A duplicate sample was collected at location 1040SG101. Using direct push technology, EKI's soil gas sampling contractor installed temporary soil gas implants in accordance with the joint DTSC and the California Regional Water Quality Control Board – Los Angeles Region ("LARWQCB") *Advisory – Active Soil Gas Investigations*, dated 28 January 2003 (DTSC and LARWQCB, 2003) ("State Advisory"), and the procedures outlined in the Work Plan. Soil gas samples were collected from as close as reasonably practical to the buildings (approximately 2 to 4 feet from the wall) and approximately 5 feet below ground surface ("bgs"), at least 1 foot above local groundwater elevation measured in the nearby groundwater monitoring wells. The soil gas samples were collected in laboratory-provided SUMMA canisters and flow controllers (for TO-15 analysis) and sorbent cartridges (for TO-13 analysis). The vacuum in each SUMMA canister was recorded prior to collection of soil gas samples, and at the end of sampling (approximately 5 inches of mercury vacuum). After collecting the samples in SUMMA canisters, EKI collected samples for TO-13 analysis in sorbent cartridges using an air pump with a flow regulator. Temporary tubing to the implants was removed after soil gas samples were collected.

4.2.2 Deviations from the Work Plan

Sampling was conducted in accordance with the Work Plan except for two deviations: (1) sample collection days, and (2) a downhole vacuum was encountered at sample location 1040SG102. Although sampling was originally anticipated to be completed in one day, the actual sampling was conducted over two days. Samples for analysis by TO-15 were collected on 18 April 2008. A component for collecting the TO-13 samples was not included in the sampling equipment delivered by the laboratory. The missing component was obtained and the TO-13 samples were collected the following day (19 April 2008) from the existing soil gas implants.

A high downhole vacuum was encountered at sample location 1040SG102; as a result, only a partial sample could be collected at that point. A downhole vacuum occurs when tightly packed soil results in low permeability soil. Even though the SUMMA canister is under vacuum, if there is very limited permeability of the soil, only a partial sample can be collected.

It is possible that tightly compacted excavation backfill from the excavation of the former AST removal resulted in the downhole vacuum observed at location 1040SG102. To test this hypothesis and to rule out the possibility of equipment malfunction, EKI conducted the following actions:

- A second borehole, 1040SG102A, was drilled at a location beside location 1040SG102. EKI attempted to collect a soil gas sample from the new sample point. The same downhole vacuum effects were observed. The new location was farther from the building. No sample was collected from this location.

- To confirm that the effects were not caused by a faulty manifold, the purge SUMMA canister and manifold previously used at a different sample location and confirmed to be working were tested at locations 1040SG102 and 1040SG102A. The downhole vacuum effects were observed in both boreholes.

- In a final test, an air pump (calibrated to pump air at approximately 100 mL/min) and a vacuum gauge were attached to the temporary soil gas implants. In less than one minute, the vacuum gauge read approximately 10 inches of mercury and the air pump shut off due to insufficient air availability. This test was tried on both locations 1040SG102 and 102A and the same results were observed at both locations.

These tests confirmed the downhole vacuum effects were due to subsurface conditions. A sample was collected for TO-15 analysis at boring 1040SG102 and submitted for analysis. Because a complete sample volume could not be collected, the detection limits for the results from this sample location were elevated (see Table 1). No sample could be collected for TO-13 analysis from location 1040SG102 due to the downhole vacuum.

4.2.3 Post-Sample Collection Activities

After completion of the soil gas sampling, the sample locations were surveyed by PLS Surveys, Inc. of Oakland, California, a State of California-licensed land surveyor. Surveyed locations are shown on Figure 2. The survey data are included in Appendix C.

4.2 Results of Laboratory Analysis

The soil gas samples were analyzed by Air Toxics Ltd. of Folsom, California, a State-certified analytical laboratory. The samples were analyzed for VOCs by EPA Method TO-15 with selective ion monitoring ("SIM") to meet project-specific detection limits, and for PAHs by EPA Method TO-13. The laboratory provided data in a Level IV package, included as Appendix B.

Table 1 presents the analytical results of the soil gas sampling event. No VOCs or PAHs were detected in any of the soil gas samples at concentrations greater than the Water Board's commercial/industrial or residential ESLs. The Water Board has not calculated or published soil gas ESLs for four of the detected analytes: 4-ethyltoluene; Freon 11; 1,3,5-trimethylbenzene; and 1,2,4-trimethylbenzene. These analytes were detected at low levels, only slightly above their respective reporting limits. Because no VOCs or PAHs were detected above residential ESLs, site-specific RBTCs were not calculated for soil gas at Building 1040.

4.3 Data Validation

Data validation was performed by DataVal of Novato, California, in accordance with the project-specific guidelines outlined in the QAPP. The data were reviewed for reporting limits, holding times, blanks, GC/MS tunes, initial calibrations, continuing calibration verification standards, internal standards, laboratory control samples, matrix spikes, matrix spike duplicates, compound identification and quantitation, and field duplicate samples. Data were also reviewed for surrogate recoveries.

Based on the report from DataVal (see Appendix D), the data are generally acceptable for use, as qualified by DataVal. Bromomethane was qualified for all samples with a "UJ" qualifier due to an initial calibration percent relative standard deviation failure. The field duplicate sample of sample 1040SG101 was qualified with a "R" qualifier due to an internal standard area count failure for the following analytes: benzene, bromodichloromethane, 1,2-dichloroethane, 1,2-dichloropropane, cis-1,3-dichloropropene, 1,4-dioxane, heptane, 4-methyl-2-pentanone, toluene, and trichloroethene. Data qualified with a "R" qualifier are not usable for any purpose. Although the bromomethane data were qualified and some of the analytes within the duplicate sample were rejected, the data validation process does not diminish the conclusions from Section 4.2 that VOCs and PAHs were not detected in the soil gas samples above residential ESLs.

4.4 Indoor Cap Assessment

The subgrade floor and wall in the northern corner of Building 1040 serve as a cap where residual petroleum hydrocarbons remain in soil above applicable cleanup levels. The cap limits direct contact of impacted soil to occupants of the building. EKI conducted an indoor cap assessment at Building 1040 on 3 June 2008. The area was inspected for visible cracks, penetrations, and gaps that could potentially allow for direct contact with COCs in soil under the building.[2] Small, hairline cracks were observed in the basement walls and floor. These cracks appeared to be surficial in nature and no gaps or large cracks were observed. Mounting anchors were also observed in the western wall adjacent to the area of residual impact. However, no indication of a complete direct contact pathway with soil was observed. Pipe penetrations through the wall appeared to be sealed.

A sump was observed in the subgrade floor, in the northeastern corner of the building near existing vacuum pumps. This area is approximately 25 feet from the area with residual petroleum hydrocarbons in soil. The sump consists of a grated opening in the concrete floor, with a clay pipe surrounded by soil at the bottom. The Trust is confirming that the pipe is connected to a sewer. EKI reviewed groundwater data in the Corrective Action Plan; no groundwater impact was identified at locations 1065MW10A, 1065MW10B, 1065SB106, and 1065HP16, immediately north of Building 1040. Therefore, no significant environmental impact from the sump is suspected.

[2] Given the low concentrations of VOCs in soil gas (see Table 1), the indoor cap assessment did not focus on potential vapor intrusion pathways.

Building 1040 contains an extensive network of trenches, as well as a significant amount of permanently installed equipment. A full floor inspection was not possible while the equipment is present and the trenches are filled with pipes and conduits. The unobstructed portions of the floor were visually inspected, photographed, and described in field notes. Four 1- to 2-inch diameter concrete cores were observed in the floor; none of these cores were in the area of residual petroleum impact. Other than these cores, within the visible portions of the floor no significant cracks or gaps were observed. The existing floor appears to be serving as an effective cap to limit direct contact with underlying soil.

5.0 CONCLUSIONS

No constituents were detected in soil gas samples collected at Building 1040 above commercial or residential ESLs. Building 1040 is planned to have commercial/industrial land use. The results below residential ESLs indicate that the risks associated with petroleum hydrocarbons and related constituents in soil gas are within acceptable ranges (i.e., less than one-in-a-million) to future Building 1040 occupants. No further action with regard to vapor intrusion mitigation will be taken in response to the results of this sampling event.

The cap assessment indicates that the floor and basement wall in the vicinity of residual petroleum hydrocarbons in soil provide a barrier to prevent direct contact with the underlying soil.

Abbreviations:
<30 - Compound not detected at or above indicated laboratory reporting limit
EPA - Environmental Protection Agency
ESLs - Environmental Screening Levels (Water Board, 2007)
µg/m^3 - Micrograms per cubic meter
NA - Not Analyzed
PAHs - Polycyclic Aromatic Hydrocarbons
R - Rejected data
VOCs - Volatile Organic Compounds

Notes:
(a) Soil gas samples for VOCs were collected on 4/18/08 and analyzed by EPA Method TO-15. Soil gas samples for PAHs were collected on 4/19/08 and were analyzed by EPA Method TO-13. With the exception of naphthalene, only detected compounds are tabulated.
(b) Although no naphthalene was detected, naphthalene results are tabulated for informational purposes. No other PAHs were detected above reporting limits.
(c) For sample 1040SG102, high downhole vacuum limited collection of a soil gas sample. Due to the smaller sample volume, the analysis of this sample required higher detection limits than the other samples. No sample was collected for PAH analysis from this location. See text for additional details.
(d) ESLs have not been calculated or published for 4-Ethyltoluene; Freon 11; 1,3,5-Trimethylbenzene; and 1,2,4-Trimethylbenzene.

APPENDIX A

DATA QUALITY OBJECTIVES TABLES FROM 13 MARCH 2008 WORK PLAN

TABLE 1 - BUILDING 1040 DATA QUALITY OBJECTIVES

Presidio of San Francisco, California

State the Problem	Identify the Decisions	Identify Inputs to the Decisions	Define the Study Boundaries	Develop Decision Rules	Specify Limits on Decision Errors	Optimize the Design
Total petroleum hydrocarbons ("TPH") as diesel and fuel oil have been detected in soil above applicable cleanup levels at the northwestern corner of Building 1040. An indoor air assessment will be conducted to evaluate the potential for vapor intrusion of volatile organic compounds ("VOCs") from the subsurface into indoor air. Inspection of the building slab will also be performed to assess potential for vapor intrusion. Two former above ground storage tanks (1040.1 and 1040.2) in the northwestern corner of the building were used by the Army to store fuel for the boiler operations at Building 1040. The Army removed the tanks and performed remedial actions; however, impacted soil near the building foundation could not be removed without compromising the building's structural integrity. The Trust plans to lease Building 1040 to tenants for recreational/commercial use. This sampling program is proposed to evaluate whether residual subsurface chemicals pose a significant risk to future recreational or commercial building occupants through the vapor intrusion exposure pathway. Access to subslab vapor is limited by slab thickness and access; therefore, perimeter soil gas sampling is proposed.	1. Are residual petroleum hydrocarbons and VOCs from previous Army impacts present in the soil gas at Building 1040? 2. If residual petroleum hydrocarbons and VOCs are present in the soil gas, are they present at concentrations that are potentially a significant risk (i.e., greater than 10^{-6} lifetime incremental cancer risk or a cumulative noncancer hazard index ("HI") >1)? 2. Does the existing slab and foundation of Building 1040 provide a sufficient cap for limiting potential exposure to residual petroleum hydrocarbons in the subsurface? Are improvements or modifications necessary to enhance the cap?	1. Results of previous chemical analysis of soil and groundwater samples. 2. Results of chemical analysis from soil gas investigation. 3. DTSC Guidance. 4. Visual assessment of the building slab.	The study boundaries for the soil gas investigation are near the perimeter of Building 1040 as internal subslab access is not available. The indoor cap assessment will be conducted within Building 1040.	1. If chemical concentrations are detected in soil gas samples, the potential risks associated with those chemicals due to vapor intrusion will be assessed. If potential risks are not significant, then no further vapor intrusion assessment is warranted. 2. If the risk associated with chemicals in soil gas due to vapor intrusion is less than or equal 10^{-6} for carcinogens or a HI of 1 for non-carcinogens, then no indoor cap modifications will be proposed. 3. If chemical concentrations in soil gas pose a risk greater than 10^{-6} for carcinogens or greater than an HI of 1, the Trust can present potential options in the completion report for follow-up assessment during development activities.	1. Field, analytical, and data validation procedures will follow the QAPP (Tetra Tech, 2001), as modified to follow DTSC Guidance. Duplicate soil gas samples will also be collected per the QAPP.	The portion of Building 1040 acting as a cap is approximately 50' x 35', with no interior walls. 1. Six soil gas samples will be collected from locations outside Building 1040, as shown on Figure 2. Subslab vapor samples cannot be collected due to slab thickness and access constraints. Samples will be collected from the soil gas from areas near the known impacted soil and around the perimeter of the building. Probes will be advanced to collect soil gas samples at approximately five feet below ground surface. Soil gas samples will be collected in SUMMA canisters and analyzed by a fixed laboratory for VOCs using US EPA Method TO-15 with SIM, if necessary, and collected on sorbent cartridges and analyzed for PAHs using US EPA Method TO-13a. Duplicates of 10% of the soil gas samples will also be analyzed by US EPA Methods TO-13a and TO-15. Soil gas data will be validated by a data validation firm.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

LABORATORY NARRATIVE
Modified TO-13A
Erler & Kalinowski, Inc.
Workorder# 0804495BR1

Six XAD Tube samples were received on April 22, 2008. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

Method modifications taken to run these samples include:

Requirement	***TO-13A***	***ATL Modifications***
Extraction Solvent	10% ether in hexane for PUF; DCM for XAD sorbent. Final extract in hexane.	DCM for PUF/XAD cartridge and XAD sorbent. Final extract in DCM.
Glassware Cleaning	Muffle furnace is utilized.	Solvent cleaning procedure is used.
Extraction technique	Soxhlet extraction	Soxhlet extraction or pressurized fluid extraction (PFE).
Calibration range	0.10 to 2.5 ug/mL	1.0 ug/mL to 160 ug/mL
Field surrogates	Deuterated PAHs are spiked on media prior to sampling.	Performed by client request only.
Solvent Process Blank	Required each analytical batch.	Not performed; each solvent lot is certified prior to use.
Method Blank	<Method Detection Limit	<Reporting Limit

Receiving Notes

Sample identification for sample 1040SG104 was not provided on the sample tag. Therefore the information on the Chain of Custody was used to process and report the sample.

Sample 1040SG104 was not stored at 4 +/-2 degrees C upon arrival at Air Toxics Ltd. The client was notified and the analysis proceeded.

THE WORKORDER WAS REISSUED ON 5/9/08 TO CORRECT SAMPLE COLLECTION DATE OF ALL SAMPLES AND TO CORRECT IDENTIFICATION OF SAMPLE DUP-1-041908.

Analytical Notes

Sampling volume was supplied by the client. A sample volume of 20.5 liters was assumed for all QC samples.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Air Toxics Ltd.
Modified EPA Methods TO-13A
Internal Standard and Associated Target Compounds and Surrogates

1,4-Dichlorobenzene-d4
Target Compounds:
Phenol
bis(2-Chloroethyl) Ether
2-Chlorophenol
1,3-Dichlorobenzene
1,4-Dichlorobenzene
1,2-Dichlorobenzene
2-Methylphenol (o-Cresol)
bis(2-Chloroisopropyl) Ether
N-Nitroso-di-n-propylamine
4-Methylphenol/3-Methylphenol
Hexachloroethane
Surrogates:
2-Fluorophenol
Phenol-d5

Phenanthrene-d10
Target Compounds:
N-Nitrosodiphenylamine
4-Bromophenyl-phenyl Ether
Hexachlorobenzene
Pentachlorophenol
Phenanthrene
Anthracene
di-n-Butylphthalate
Fluoranthene

Naphthalene-d8
Target Compounds:
Nitrobenzene
Isophorone
2-Nitrophenol
2,4-Dimethylphenol
Benzoic Acid
bis(2-Chloroethoxy) Methane
2,4-Dichlorophenol
1,2,4-Trichlorobenzene
Naphthalene
4-Chloroaniline
Hexachlorobutadiene
4-Chloro-3-methylphenol
2-Methylnaphthalene
Hexachlorocyclopentadiene
1-Methylnaphthalene
Surrogates:
Nitrobenzene-d5

Chrysene-d12
Target Compounds:
Pyrene
Butylbenzylphthalate
3,3'-Dichlorobenzidine
Chrysene
Benzo(a)anthracene
bis(2-Ethylhexyl)phthalate
Surrogates:
Pyrene-d10

Acenaphthene-d10
Target Compounds:
2,4,6-Trichlorophenol
2,4,5-Trichlorophenol
2-Chloronaphthalene
2-Nitroaniline
Dimethylphthalate
Acenaphthylene
2,6-Dinitrotoluene
3-Nitroaniline
Acenaphthene
2,4-Dinitrophenol
4-Nitrophenol
2,4-Dinitrotoluene
Dibenzofuran
Diethylphthalate
Fluorene
4-Chlorophenyl-phenyl Ether
4-Nitroaniline
4,6-Dinitro-2-methylphenol
Surrogates:
2,4,6-Tribromophenol
Fluorene-d10

Perylene-d12
Target Compounds:
Di-n-Octylphthalate
Benzo(b)fluoranthene
Benzo(k)fluoranthene
Benzo(a)pyrene
Indeno(1,2,3-c,d)pyrene
Dibenz(a,h)anthracene
Benzo(g,h,i)perylene

Thank you for selecting Air Toxics Ltd. We have received your samples and have found discrepancies. In order to expedite analysis and reporting, please review the attached information for accuracy. Corrections can be faxed to **Kyle Vagadori at 916-985-1020.**
ATL will proceed with the analysis as specified on the Chain of Custody and Sample Login page.

Sample identification for sample 1040SG104 was not provided on the sample tag. Therefore the information on the Chain of Custody was used to process and report the sample.

Sample 1040SG104 was not stored at 4 +/-2 degrees C upon arrival at Air Toxics Ltd. The client was notified and the analysis proceeded.

Your prompt response is appreciated.

Sample Discrepancy Report

Identification

Initiated By: mG **Date:** 4/24/08 **Discrepancy Type:** (circle all that apply) I. (II.) III.

Workorder(s) affected: 0804495 **Sample(s) affected:** 12A

Project ID: _____

I. Sample Receipt Discrepancies

Narration Not Required:

- ☐ COC was not filled out in ink.
- ☐ Sample container (cartridge/tube/VOA vial) was received broken, however sample was intact.
- ☐ Flow controller used - canister samples received at ambient or under pressure.
- ☐ No brass cap on canister.
- ☐ Date of Collection noted on first sample, but no arrow down to indicate all samples.
- ☐ Sample date error/missing on COC but noted on sample tag (circle one).

Narration Required in Lab Narrative and Sample Confirmation:

- ☐ COC improperly relinquished / received.
- ☐ Sample tags / can numbers do not match the COC.
- ☐ Samples received at wrong temperature (up to 10°C); ice / blue ice (circle one) was present. A temp. blank was / was not present (circle one).
- ☐ Custody Seal on the outside of the container was broken / improperly placed (circle one).
- ☒ Other (describe below).

Describe the Discrepancy: ID tag blank

II. Sample Receipt/Screening Discrepancies requiring CSR notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out CSR must be notified within 24 hrs of initiation

- ☐ COC was not received with samples.
- ☐ Analysis method(s) is not specified / incorrectly specified (circle one) on the COC.
- ☒ Number of samples on the COC does not match the number of samples that were received.
- ☐ Samples were received expired.
- ☐ Sampling date / time (sulfur only) is not documented for *some* / *any* samples (circle one).
- ☐ Sample received with significant (pooling) volume of H_2O in the Tedlar Bag.
- ☐ Sample container (cartridge/tube/VOA vial/DNPH Bottle, etc.) was received broken / leaking (circle one); Sample Can / cannot be analyzed (circle one).
- ☐ Tedlar Bag received leaking / flat (circle one). Sample Can / cannot (circle one) be analyzed.
- ☐ Canister was at ambient pressure at time of pressurization and (check all that apply):
  ☐ canister failed leak check on two manifolds, ☐ canister valve was open, ☐ brass nut was loose. Sample Can / cannot be analyzed (circle one).
- ☐ Tedlar bag / canister received emitting a strong odor; Sample Can / cannot (circle one) be analyzed.
- ☐ Canister sample received with a vacuum difference >7.0"Hg between the receipt vac. and the final vac. reported on the COC, indicating loss of vacuum.
- ☐ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
- ☐ Trip Blank received at low vacuum (< 25"Hg).
- ☐ Tedlar Bag for Sulfur analysis has metal fitting.
- ☐ Incorrect sampling media / container for analysis requested.
- ☐ Sample was received at ≥ 10°C.
- ☐ Other (describe below)

Initials: _____ (if not the original initiator) **Date:** _____ ☐ **CSR Notified** (see section below)

Describe the Discrepancy: "1040SG104" - missing

III. Lab Discrepancies requiring Team Leader/CSR notification

Document in Analytical Notes of Lab Narrative

If Section III. is filled out CSR must be notified within 24 hrs of initiation

- ☐ Tedlar Bag found to be leaking at the time of analysis; sample can / cannot (circle one) be analyzed.
- ☐ Tedlar Bag found to be flat at the time of analysis.
- ☐ Canister found to be leaking at the time of analysis.
- ☐ Tedlar Bag received at low volume; sample cannot be analyzed.
- ☐ Sulfur samples received with insufficient time to analyze prior to expiration.
- ☐ VOST tube saturated; bag dilution necessary.
- ☐ Sample loss due to instrument malfunction / broken glassware.
- ☐ Other (describe below).

Initials: _____ **Date:** _____ ☐ **CSR Notified**
(if not the original initiator) (see section below)

Team Lead Initials: _____ **Date:** _____

Describe the Discrepancy: _____

_____

Client Services Use Only

Client Services Notification

CSR notified: VV Date: 4/25/08

Action:

☐ It is not necessary to notify the client. Narrate the discrepancy in Receiving Notes/Analytical Notes of Lab Narrative.

CSR Initials: _____ Date: _____

☑ Client notification required. See attached client contact / email, or comments below:

Client Notification:

Person notified: A. Abels Date: 4/25/08

Comments: Client explained which unused sample was 12A. It was the only XAD type tube.

☐ Lab notified Name: _____ Date: _____

Additional Notifications

CSR notified: _____ Date: _____

Action:

☐ It is not necessary to notify the client. Narrate the discrepancy by documenting on cover page of Sample Receipt Confirmation and in Receiving Notes/Analytical Notes of Lab Narrative.

DATA REVIEW CHECKLIST

Work Order #: 0804495B

A	R	T	M	Q	
☐	☑	☐	☑	☐	Analysis/Reporting vs. Project Profile/SOP requirements checked (i.e. 100% Dups, J-Flag to MDL, etc)
	☑	☐	☑	☐	The final report has the correct reporting list, special units, and header info.
	☑	☐	☑	☐	Lab Narrative is correct (proper method & description/Receiving & Analytical notes correct)
☐	NA	☐	NA	☐	Corrective Action issued - #
☐	☐	☐	☑	☐	Unusual circumstances have been documented in the notes section below

LUMEN *validation report present and initialed* ***CIRCLE (YES / (NO)***

☐	☑	☐	☑	☐	Lab Blank, CCV, LCS and DUP met QC criteria
☐	☑	☐	☑	☐	Hold time is met for all samples
	☑	☐	☑	☐	Appropriate data qualifier flags are applied
✓	☑	☐	☑	☐	Manual integrations for samples and QC are properly documented
☐	☑	☐		☐	Samples analyzed within the project or method specific clock
	☑	☐			Retention times have been verified
☐	☑	☐		☐	Appropriate ICAL(s) included
	☑	☐	☑	☐	At least one result per sample is verified against the target quant sheets/raw data

☐	☑	☐		☐	Dilution factor correctly calculated (sample load volume, syringe and bag dilutions, can pressurization(s))
☐	☑	☐			Correct amount of sample analyzed (i.e. sample not over-diluted)
	☑	☐			Spectra verified - documentation of spectral defense included (Section 5A of eCVP pkg)
	NA	☐			TICs resemble reference spectra
	☐	☐			TICs between duplicate samples are consistent
☐	☑	☐	☑		Checked samples for trends (i.e. Influent>Effluent, Landfill or Ambient etc)
	☑		☑		Special units for all samples in the final report are correctly calculated
	☑	☐	NA		Manually entered results checked (i.e. special CCV compounds)
	☐	☐	☐		TPH/NMOC (verify calculations and correct reference compound used)
	☑				Chain of Custody scanned correctly
				☐	Verify sample id's vs. chain of custody
☐	☑				Samples pressurized w/ appropriate gas (N_2 or He) ☐ Tedlar Bag only
☐	☐				Final pressure consistent with canister size (6L vs. 1L)
☐	☐				Verify receipt pressures against logbook and Target
☐	☐				Verify canister ID #'s
	☐		NA		Extra printed copies are provided per client profile
	☑		☑		Final invoice amount correct (adjusted for TAT, Penalties, Re-issue Charges etc.)
	☑	☐	NA	☐	Client LUMEN report reviewed for accuracy and completeness

Notes: *(to include: noting samples with QA/QC problems, Blanks with positive hits, narratives, etc.)*

AN ENVIRONMENTAL ANALYTICAL LABORATORY

LABORATORY NARRATIVE
Modified TO-15 Soil Gas
Erler & Kalinowski, Inc.
Workorder# 0804495A

Seven 6 Liter Summa Canister samples were received on April 22, 2008. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 50 mLs of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
Daily CCV	+- 30% Difference	</= 30% Difference with two allowed out up to </=40%.; flag and narrate outliers
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Table 1

Client Sample ID	Lab Sample ID	Date Collected	Date Received	Date Extracted	Sample Holding Time (Days)	Sample Extract Date Analyzed	Sample Extract Holding Time (Days)	Sample Condition

Initial Calibration Narrative

A 9 point initial calibration was analyzed on MSDC on 04/24/08. As noted on the accompanying analytical run logs, the following point calibration level 3 was re-analyzed due to an incorrect load volume.

File number C041610 SP-1 Compounds was corrupt and was not included with the initial calibration.

AMBIENT AIR METHOD TO14A/TO15

Data file : /chem/msdc.i/25Apr2008.b/c042503.d
Lab Smp Id: 1544-81C Client Smp ID: CCV
Inj Date : 25-APR-2008 01:24
Operator : JP Inst ID: msdc.i
Smp Info : 50mL,31443
Misc Info : CCV
Comment :
Method : /chem/msdc.i/25Apr2008.b/t145424.m
Meth Date : 28-Apr-2008 09:44 lzhang Quant Type: ISTD
Cal Date : 24-APR-2008 15:16 Cal File: c042414.d
Als bottle: 1 Continuing Calibration Sample
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: AT04.sub
Target Version: 3.50 Sample Matrix: AIR
Processing Host: eeyore

Concentration Formula: Amt * DF * CpndVariable

Cpnd Variable Local Compound Variable

Air Toxics Ltd.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: msdc.i
Lab File ID: c042506.d
Lab Smp Id: 1544-82A
Analysis Type: VOA
Quant Type: ISTD
Operator: JP
Method File: /chem/msdc.i/25Apr2008.b/t145424.m
Misc Info: LCS

Calibration Date: 25-APR-2008
Calibration Time: 01:24
Client Smp ID: LCS
Level: LOW
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
71 Bromochloromethan	426794	256076	597512	419330	-1.75
92 1,4-Difluorobenze	1936987	1162192	2711782	1866312	-3.65
125 Chlorobenzene-d5	1655878	993527	2318229	1593893	-3.74

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
71 Bromochloromethan	7.92	7.59	8.25	7.92	0.00
92 1,4-Difluorobenze	9.75	9.42	10.08	9.75	0.00
125 Chlorobenzene-d5	14.86	14.53	15.19	14.86	0.00

AREA UPPER LIMIT = + 40% of internal standard area.
AREA LOWER LIMIT = - 40% of internal standard area.
RT UPPER LIMIT = + 0.33 minutes of internal standard RT.
RT LOWER LIMIT = - 0.33 minutes of internal standard RT.

Sample Discrepancy Report KV

Identification

Initiated By: MG **Date:** 4/24/08 **Discrepancy Type:** (circle all that apply) (I.) (II.) III.

Workorder(s) affected: 0804495 **Sample(s) affected:** 02A, 06A

Project ID: 11566

I. Sample Receipt Discrepancies

Narration Not Required:

- ☐ COC was not filled out in ink.
- ☐ Sample container (cartridge/tube/VOA vial) was received broken, however sample was intact.
- ☐ Flow controller used - canister samples received at ambient or under pressure.
- ☐ No brass cap on canister.
- ☐ Date of Collection noted on first sample, but no arrow down to indicate all samples.
- ☐ Sample date error/missing on COC but noted on sample tag (circle one).

Narration Required in Lab Narrative and Sample Confirmation:

- ☐ COC improperly relinquished / received.
- ☑ Sample tags (can numbers) do not match the COC.
- ☐ Samples received at wrong temperature (up to 10°C); ice / blue ice (circle one) was present. A temp. blank was / was not present (circle one).
- ☐ Custody Seal on the outside of the container was broken / improperly placed (circle one).
- ☐ Other (describe below).

Describe the Discrepancy: Can# should be 4129

II. Sample Receipt/Screening Discrepancies requiring CSR notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out CSR must be notified within 24 hrs of initiation

- ☐ COC was not received with samples.
- ☐ Analysis method(s) is not specified / incorrectly specified (circle one) on the COC.
- ☐ Number of samples on the COC does not match the number of samples that were received.
- ☐ Samples were received expired.
- ☐ Sampling date / time (sulfur only) is not documented for *some* / *any* samples (circle one).
- ☐ Sample received with significant (pooling) volume of H_2O in the Tedlar Bag.
- ☐ Sample container (cartridge/tube/VOA vial/DNPH Bottle, etc.) was received broken / leaking (circle one); Sample Can / cannot be analyzed (circle one).
- ☐ Tedlar Bag received leaking / flat (circle one). Sample Can / cannot (circle one) be analyzed.
- ☐ Canister was at ambient pressure at time of pressurization and (check all that apply):
  - ☐ canister failed leak check on two manifolds, ☐ canister valve was open, ☐ brass nut was loose. Sample Can / cannot be analyzed (circle one).
- ☐ Tedlar bag / canister received emitting a strong odor; Sample Can / cannot (circle one) be analyzed.
- ☐ Canister sample received with a vacuum difference >7.0"Hg between the receipt vac. and the final vac. reported on the COC, indicating loss of vacuum.
- ☑ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
- ☐ Trip Blank received at low vacuum (< 25"Hg).
- ☐ Tedlar Bag for Sulfur analysis has metal fitting.
- ☐ Incorrect sampling media / container for analysis requested.
- ☐ Sample was received at ≥ 10°C.
- ☐ Other (describe below)

Initials: BS **Date:** 4/25/08 (If not the original initiator)

☐ **CSR Notified** (see section below)

Describe the Discrepancy: Receipt Vacuum of 06A was 26.5"Hg

III. Lab Discrepancies requiring Team Leader/CSR notification

Document in Analytical Notes of Lab Narrative

If Section III. is filled out CSR must be notified within 24 hrs of initiation

- ☐ Tedlar Bag found to be leaking at the time of analysis; sample can / cannot (circle one) be analyzed.
- ☐ Tedlar Bag found to be flat at the time of analysis.
- ☐ Canister found to be leaking at the time of analysis.
- ☐ Tedlar Bag received at low volume; sample cannot be analyzed.
- ☐ Sulfur samples received with insufficient time to analyze prior to expiration.
- ☐ VOST tube saturated; bag dilution necessary.
- ☐ Sample loss due to instrument malfunction / broken glassware.
- ☐ Other (describe below).

Initials: _____ **Date:** _____ ☐ **CSR Notified**
(if not the original initiator) (see section below)

Team Lead Initials: _____ **Date:** _____

Describe the Discrepancy: _____

Client Services Use Only

Client Services Notification

CSR notified: JW Date: 4/25/08

Action:

☐ It is not necessary to notify the client. Narrate the discrepancy in Receiving Notes/Analytical Notes of Lab Narrative.

CSR Initials: _____ Date: _____

☑ Client notification required. See attached client contact / email, or comments below:

DATA REVIEW CHECKLIST

Work Order #: 0804495A

A	R	T	M	Q	
☑	☑	☑	☑	☐	Analysis/Reporting vs. Project Profile/SOP requirements checked (i.e. 100% Dups, J-Flag to MDL, etc)
	☑	☑	☑	☐	The final report has the correct reporting list, special units, and header info.
	☑	☐	☑	☐	Lab Narrative is correct (proper method & description/Receiving & Analytical notes correct)
NA	NA	NA	NA	☐	Corrective Action issued - #
☐	☐	☐	☐	☐	Unusual circumstances have been documented in the notes section below

LUMEN *validation report present and initialed* ***CIRCLE (YES / NO)***

☑	☐	☐	☐	☐	Lab Blank, CCV, LCS and DUP met QC criteria
☑	☐	☐	☐	☐	Hold time is met for all samples
	☐	☐	☐	☐	Appropriate data qualifier flags are applied
	☐	☐	☐	☐	Manual integrations for samples and QC are properly documented
☑	☐	☐		☐	Samples analyzed within the project or method specific clock
	☐	☐			Retention times have been verified
☑	☐	☐		☐	Appropriate ICAL(s) included
	☐	☐	☐	☐	At least one result per sample is verified against the target quant sheets/raw data

☑	☑	☑	☐	Dilution factor correctly calculated (sample load volume, syringe and bag dilutions, can pressurization(s))
☑	☑	☑		Correct amount of sample analyzed (i.e. sample not over-diluted)
	☑	☑		Spectra verified - documentation of spectral defense included (Section 5A of eCVP pkg)
	NA	NA		TICs resemble reference spectra
	☐	☐		TICs between duplicate samples are consistent
☑	☑	☑	☐	Checked samples for trends (i.e. Influent>Effluent, Landfill or Ambient etc)
	NA	NA		Special units for all samples in the final report are correctly calculated
	NA	☐		Manually entered results checked (i.e. special CCV compounds)
	☐	☐		TPH/NMOC (verify calculations and correct reference compound used)
	☑			Chain of Custody scanned correctly
		☐		Verify sample id's vs. chain of custody
☑	☑			Samples pressurized w/ appropriate gas (N_2 or He) ☐ Tedlar Bag only
☑	☑			Final pressure consistent with canister size (6L vs. 1L)
☑	☑			Verify receipt pressures against logbook and Target
☑	☑			Verify canister ID #'s
	NA	NA		Extra printed copies are provided per client profile
	☑	☐		Final invoice amount correct (adjusted for TAT, Penalties, Re-issue Charges etc.)
	☑	☑	☐	Client LUMEN report reviewed for accuracy and completeness

Notes: *(to include: noting samples with QA/QC problems, Blanks with positive hits, narratives, etc.)*

A/R: Spectral defense on 04A and 05A as the reference for the rests.

APPENDIX D

DATA VALIDATION REPORT

TO: John DeWitt, Erler & Kalinowski, Inc. June 17, 2008

FROM: Donna Breaux, DataVal, Inc. Erler & Kalinowski Project No. A700004.19

DB 6/17/08

DATA VALIDATION SUMMARY REPORT FOR THE BUILDING 1040 SAMPLING EVENT, THE PRESIDIO OF SAN FRANCISCO, CA

LABORATORY: Air Toxics, Ltd., Folsom, CA

SAMPLING DATES: April 18 and 19, 2008

Data validation of Level IV laboratory data packages was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan, April, 2001; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, June, 2001.

The data were reviewed for holding times, surrogate recoveries, laboratory blanks, laboratory control samples, matrix spikes and matrix spike duplicates, GC/MS tunes, initial calibrations, continuing calibration verification standards, internal standards, field QC samples and compound identification and quantitation.

The following paragraphs highlight the essential findings of the data validation effort:

I. **Volatile Organic Compounds (VOCs) by GC/MS (TO-15)**
Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections H and J.

A. Reporting Limits
Project required reporting limits are not listed in the QAPP for VOCs in air matrix samples.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.

H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples, with the following exception:

1. The 4/24/08 air matrix initial calibration analyzed on instrument MSD-C had bromomethane with a percent relative standard deviation (%RSD) greater than the 30% acceptance criteria at 35%. The non-detect results for bromomethane in the associated project samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of samples qualified for initial calibration percent relative standard deviation failure.

I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples, with the following exception:

1. One project sample had an internal standard area outside the -40% to +40% acceptance criteria. The non-detect results for the compounds associated with the outlying internal standard were qualified as rejected (R). The following table lists the sample with a failing internal standard.

Project Sample ID	Laboratory Sample ID	Internal Standard	Area Count	Area Acceptance Range
DUP-1-041808	0804495A-07A	1,4-Difluorobenzene	1160223	1162192-2711782

See Table 2 of this report for a summary of samples qualified for internal standard area count failure.

K. Compound Identification and Quantitation
All samples in laboratory sample delivery group 0804495A received full (Level IV) data validation. This included re-calculation of surrogate values, GC/MS tunes, initial and continuing calibrations and internal standard areas; in addition to re-calculation of all reported results for VOCs in these samples. The reported results for VOCs in these samples were verified as correctly reported by the laboratory.

II. Polycyclic Aromatic Hydrocarbons (PAHs) by GC/MS (TO-13A)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
Project required reporting limits are not listed in the QAPP for PAHs in air filter samples.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.

H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

K. Compound Identification and Quantitation
All samples in laboratory sample delivery group 0804495BR1 received full (Level IV) data validation. This included re-calculation of surrogate values, GC/MS tunes, initial and continuing calibrations and internal standard areas; in addition to re-calculation of all reported results for PAHs in these

samples. The reported results for PAHs in these samples were verified as correctly reported by the laboratory.

FIELD DUPLICATES

Field duplicate precision was evaluated by calculating the relative percent difference (RPD) between detected results in the original sample and its associated duplicate. The control limit used for field duplicates was an RPD less than or equal to 50 percent, or the absolute difference of the two results must be less than twice the reporting limit for those analytes that were at or near the detection limit. Two samples were collected in duplicate for the Building 1040 sampling event.

Project Sample Primary ID	Laboratory Sample ID	Project Sample Duplicate ID	Laboratory Sample ID
1040SG101	0804495A-01A	DUP-1-041808	0804495A-07A
1040SG101	0804495BR1-08A	DUP-1-041908	0804495BR1-13A

The attached Table 3 summarizes the field duplicate sample results. All compounds were non-detect in the field duplicate pairs.

SUMMARY

The attached Table 1 lists the samples and analyses included in the data validation effort. All samples received full (Level IV) data validation. The attached Table 2 summarizes the data qualifications required for the project samples for each test method included in the data packages.

USABILITY

The quality control criteria were reviewed, and other than those discussed above, all criteria were met and the data are considered acceptable. Rejected sample results (R) are not usable for any purpose. Estimated sample results (J/UJ) are usable only for limited purposes. Based upon the cursory and full data validation, all other results are considered valid and usable for all purposes.

VALIDATION QUALIFIERS IDENTIFICATION

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," October, 1999.

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. *A minus sign (-) indicates the numerical value has a low bias. A plus sign (+) indicates the numerical value has a high bias.*

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

1.0 INTRODUCTION

The California Environmental Protection Agency, Department of Toxic Substances Control ("DTSC") requires sites that do not fully meet the most stringent Presidio-specific human health cleanup levels (i.e., residential cleanup levels) and/or site-specific ecological cleanup levels to have land use restrictions to inform and protect future users. This Site-Specific Addendum has been prepared for the Building 1065 Area ("the Site") as an addendum to the Presidio Trust Land Use Control Master Reference Report ("LUCMRR"; EKI, 2006) because certain areas within the Building 1065 Area have soil with chemical concentrations that do not meet site-specific cleanup levels. The Building 1065 Area includes Buildings 1040, 1063, 1065, and the surrounding area. The Presidio-specific cleanup levels are presented in the Presidio-wide Cleanup Level Document (*EKI, 2002* [with 2006 updates]). The site-specific cleanup levels for the Building 1065 Area are presented in the Corrective Action Plan ("CAP"; *MACTEC, 2007*). This Site-Specific Addendum for the Building 1065 Area presents a site background, identifies the chemicals of concern ("COCs") that exceed cleanup levels, identifies areas where land use controls ("LUCs") apply, and describes the specific land use restrictions and operations and maintenance ("O&M") and monitoring requirements that are applicable to land use control zones at the Site.

2.0 AREAS INCLUDED IN THE LAND USE CONTROL AND TYPES OF LAND USE RESTRICTIONS FOR THE BUILDING 1065 AREA

Figure 1 shows the location of the Building 1065 Area. Figure 2 shows three separate LUC zones at the Site. One area, LUC Zone 1, is located north of Building 1063 and overlaps into Fill Site 6B. The second area, LUC Zone 2, is located beneath the west wall of Building 1063 and the third area, LUC Zone 3, is located beneath and just west of the northwest corner of Building 1040. Section 3 provides further discussion of the rationale for identification of the LUC zones.

Land Use Control (LUC): The LUC is designated for areas where representative concentrations[1] of residual COCs are left in-place in soil exceeding cleanup levels and have a potential to result in significant risk for certain future land uses. The LUC restricts future land uses that are incompatible with residual COC concentrations remaining at the Site above applicable cleanup levels. The LUC also serves to notify present or future owners and tenants at the Site of the presence and location of residual COCs in soil at representative concentrations above cleanup levels.

Four types of land use restrictions/requirements have been identified for the Building 1065 Area: (1) Sensitive Land Use Restrictions; (2) Health and Safety Requirements; (3) Soil Management Requirements; and (4) Surface Cover and Inspection Requirements. In addition, there may be additional O&M/monitoring or other restrictions/requirements in LUC Zones where there are potential indoor air quality concerns. Section 4 provides a description of these land use and O&M/monitoring requirements and restrictions.

[1] Section 3.3.1 of the LUCMRR states that representative concentrations will be determined in the remedial action plan ("RAP"), completion report, or other such decision document based on properties such as the maximum concentration detected, the 95% upper confidence limit of the mean ("UCL") concentration of the chemical, or other site-specific conditions, such as the location and depths of chemical concentrations above cleanup levels, and upgradient conditions.

3.0 REMEDIATION SUMMARY AND CHEMICALS OF CONCERN

This section describes the site history and corrective actions implemented at the Site, and identifies the remaining COCs detected in soil at concentrations above Site-specific cleanup levels. A more detailed summary of corrective actions and COCs in soil and groundwater at the Site is provided in the Corrective Action Plan, Building 1065 Area, Presidio of San Francisco, California (*MACTEC, 2007*) and the Corrective Action Plan Construction Completion Report (*MACTEC, 2009*).

3.1 Site History

The Site is located in the northeastern portion of the Presidio of San Francisco, California (Presidio; Figure 1). The Site was historically used for vehicle maintenance, and contained a service/gas station, garage, laundry with dry cleaning facility, crematory, paint shop, power house/steam plant, aboveground and underground fuel oil storage tanks, and fuel oil distribution lines, occupational therapy building, warehouses, isolation ward and prison, wagon shed, and an incinerator. Many of these structures, including fuel storage tanks and distribution lines, have been removed from the Site. The Site currently consists of historic buildings (Buildings 1040, 1047, 1062, and 1063), paved parking areas, roadways, and some landscaping (Figure 2). Planned use of the Building 1065 Area includes commercial and recreational use. In addition, west of the Site is the planned location of the Tennessee Hollow riparian corridor.

3.2 Summary of Remedial Actions at the Site

Corrective actions implemented at the site included removal of aboveground storage tanks (ASTs), underground storage tanks (USTs), fuel distribution system (FDS) lines, a Phase I Interim Action (Phase I IA) excavation in the area south of Building 1063, and implementation of the CAP. Corrective actions implemented at the site included the following:

Army Corrective Actions (1993-1996)

- Removal of Building 1027 UST
- FDS Removal (Edie and Girard Roads; FDS line segments BR8-1, BR16-1, and BR10-3)
- Removal of Water Storage Tanks 1047.1, 1047.2, and 1047.3
- Removal of ASTs 1040.1 & 1040.2 and Associated Distribution Lines
- Removal of USTs 1065.1, 1065.2, 1065.3.

Trust Corrective Actions (2002-2008)

- Cleaning of Building 1047 Hydraulic Storage Tank and Elevator Pit
- Removal of Building 1062 Hot/Well Sump
- Removal of UST 1047.4
- Phase I Interim Action
- Removal of UST 1065.4
- Birmingham Road FDS Line Removal
- Implementation of Building 1065 Corrective Action Plan (soil excavation inside, north, and immediately south of Building 1063).

3.3 Site Conditions and COCs Within Land Use Control Zones

Table 1 below summarizes for each LUC Zone, a description of the zone, and the COCs remaining in soil above cleanup levels at the Site following corrective actions. The LUC zones are shown on Figure 2.

TABLE 1
SUMMARY OF LUC ZONES AND COCs AT THE BUILDING 1065 AREA

Land Use Restriction Zone	Description of Land Use Control Zone	COCs Detected above Applicable Cleanup Levels in Soil
LUC Zone 1	Located north of Building 1063 where COCs were detected above cleanup levels in soil samples collected from the sidewall of an excavation. Contamination is believed to be related to fill material. The LUC Zone corresponds to contaminated soil encountered on the west side of former Excavation 2 (represented by one sample containing benzo[a]pyrene above the cleanup level) and includes the west wall of Excavation 2 and soil 5 feet to the west. The LUC Zone overlaps with Fill Site 6B. Contaminated fill in the area will be addressed as part of the selected remedy for Fill Site 6B. This LUC Zone will be incorporated within the boundaries of Fill Site 6B after investigation and site evaluation work is completed for that site (CDM, 2006). Contaminated soil in the LUC zone is covered with asphalt pavement.	Benzo(a)pyrene was detected above site-specific cleanup levels (residential human health) at 5 feet below ground surface (bgs). The detected concentration of benzo(a)pyrene also exceeds the cleanup level for protection of maintenance workers.
LUC Zone 2	Located beneath the southern wall of Building 1063 where contaminants were detected above cleanup levels in the sidewall of an excavation. Contamination is likely from a release from upgradient USTs and FDS lines that have been removed. Contamination was left in place because excavation would require costly shoring and underpinning of the building foundation. Contaminated soil in the LUC zone is covered by building foundation and/or soil cover. Pending results of a soil vapor assessment, additional barriers to contaminant migration may be required as part of construction inside Building 1063.	Total petroleum hydrocarbons (TPH) as diesel, TPH as gasoline, TPH as fuel oil, and lead were detected in soil above site-specific cleanup levels (protection of groundwater quality and residential human health) at 4 to 4.5 feet bgs. A soil vapor assessment will be performed prior to occupation of Building 1063 to evaluate migration of volatile compounds into indoor air.

TABLE 1
SUMMARY OF LUC ZONES AND COCs AT THE BUILDING 1065 AREA

Land Use Restriction Zone	Description of Land Use Control Zone	COCs Detected above Applicable Cleanup Levels in Soil
LUC Zone 3	Located beneath and just west of the northwest corner of Building 1040, where COCs were detected above cleanup levels in a sample from a slant boring drilled next to the building. Contamination is likely from a release from a former fuel oil AST and distribution lines that have been removed. Limited access, chemical impacts 5 feet below ground surface, and the planned commercial land use make capping an appropriate remedial alternative. Contaminated soil in the LUC zone is covered by the foundation of Building 1040, un-landscaped soil on the west side of Building 1040, and concrete and asphalt pavement on the north side of Building 1040.	TPH diesel and TPH fuel oil detected above site specific cleanup levels (protection of groundwater quality and/or human health residential) in saturated soil at 7.7 feet bgs. Concentrations do not exceed cleanup levels protective of maintenance workers. A soil vapor assessment was performed in April 2008 to evaluate the potential for vapor intrusion of volatile organic compounds into indoor air. Results of the soil vapor assessment indicated that risks from residual petroleum hydrocarbons and related constituents in soil gas are within acceptable ranges. No further action with regard to vapor intrusion mitigation was recommended (EKI, 2008).

4.0 SITE-SPECIFIC LAND USE RESTRICTIONS AND O&M/MONITORING REQUIREMENTS

4.1 Land Use Restrictions

Land use restrictions are established for specific limited areas within the Site for the following reasons:

- Sensitive use restrictions are necessary due to the presence of residual COCs in soil above cleanup levels; and/or
- Cover, health and safety, soil handling, and soil reuse requirements are designated due to the presence of residual concentrations of COCs in soil.

The land use restrictions described below are applicable to the three LUC zones at the Building 1065 Area. Table 2 provides the land use restriction information that will be added to the Trust's GIS database for tracking LUC sites. If data are collected in the future for all or a portion of the Building 1065 Area that demonstrate chemical concentrations are less than applicable cleanup levels, the Trust can request and recommend to the DTSC that the LUC be removed.

Applicable to all LUC Zones at the Building 1065 Area:

- **Sensitive Use Restrictions** - Use of the LUC Zones for construction of new facilities for housing or the operation of schools, hospitals, playgrounds, and day care centers is prohibited.
- **Soil Management Requirements** - Chemically-impacted soil encountered during excavation or subsurface work shall be addressed in accordance with the technical requirements of the Trust's Petroleum Contingency Plan, dated 16 August 2004 (*EKI, 2004*) in coordination with the Trust Remediation Department or its successor.
- **Surface Cover Requirements** - The LUC Zones must remain covered with pavement or another barrier (e.g., a minimum of 24 inches of fill, or 6 inches of fill and an engineered barrier layer) in landscaped areas. The cover must be maintained for the entire LUC Zone unless soil sampling shows that the representative concentrations of COCs do not exceed applicable cleanup levels. Confirmation soil sampling to demonstrate that the cover alternative is not warranted shall be no less than one sample every 25 linear feet (for sidewall sampling) and 625 square feet (for bottom sampling).

Applicable to LUC Zones 1 and 2:

- **Health and Safety Requirements** - Soil disturbance activities within LUC Zones 1 and 2 must be performed according to a site-specific health and safety plan ("H&S Plan") that

is consistent with applicable health and safety standards, such as 29 CFR 1910.120. Workers in the designated LUC Zone shall follow the H&S Plan, must have the appropriate level of health and safety training and must use the appropriate level of personal protective equipment, as specified in the relevant H&S Plan.

4.2 O&M/Monitoring Requirements

While O&M and monitoring measures are not technically LUCs, engineering and monitoring requirements are identified in this section to allow for tracking of long-term site activities and restrictions.

Applicable to all LUC Zones:

- **Surface Cover Inspection Requirements** - Surface cover in the LUC Zones will be inspected annually to verify that the soil cover has not been damaged, altered, or removed. In areas where the surface cover consists of soil, surveys will be performed to verify that the soil cover has not eroded away or been removed. For LUC Zone 3, the survey will consist of a ground rod established west of Building 1040. Documentation will include completion of inspection forms, photographs of established reference areas, and notation of recommended actions to repair damage or unauthorized modifications to the surface cover. A surface cover inspection form is attached to this document.

Applicable to LUC Zone 2

- **Potential indoor air monitoring requirements and other restrictions** - If results of indoor air assessments show potential for volatile organic compounds to migrate into and impact indoor air quality, additional requirements may be added that may include incorporation of mitigation measures into planned redevelopment and indoor air sampling.

APPENDIX M

ATTACHMENT
SURFACE COVER INSPECTION FORM, LUC ZONES 1, 2, AND 3, BUILDING 1065 AREA, PRESIDIO OF SAN FRANCISCO, CALIFORNIA.

Surface Cover Inspection Form
LUC Zones 1, 2, and 3, Building 1065 Area
Presidio of San Francisco, California

Date: _____ Completed by: _____

Weather: _____

Inspection Checklist Item	Change since last inspection? (Yes/No)	Comments
LUC Zone 1 - North of Building 1063		
Changes in concrete and asphalt pavement Have there been changes to concrete and asphalt pavement north of Building 1063? Describe changes, take photograph, and identify on site map.		**Location** **Description of Change** **Photo ID**
LUC Zone 2 - Inside of and south of Building 1063		
Has the area inside of and west of Building 1063 changed since the last inspection; e.g., have any construction activities been performed, is the area secure? Describe changes, take photograph, and identify on site map.		**Location** **Description of Change** **Photo ID**
LUC Zone 3 - Building 1040 outdoor cap		
Status of monitoring point at Building 1040 Measure distance from the top of the established survey rod to the top of ground surface		**Point 1:** **Photo ID**

Surface Cover Inspection Form
LUC Zones 1, 2, and 3, Building 1065 Area
Presidio of San Francisco, California

Inspection Checklist Item	Change since last inspection? (Yes/No)	Comments
Changes in ground surface in unpaved areas Has the area west of Building 1040 changed since the last inspection; e.g., has soil eroded away or been removed? Describe changes, take photograph, and identify on site map.		**Location** **Description of Change** **Photo ID**
Changes in concrete and asphalt pavement Have there been changes to concrete and asphalt pavement north of Building 1040? Describe changes, take photograph, and identify on site map.		**Location** **Description of Change** **Photo ID**
Other changes in site status Under comments list any additional changes in site status including additional construction or re-vegetation activities. Take photograph		**Location and description of change:** **Photo ID**
